

Technical Note TN-606

Introduction of The T2000-A37 Selcall Module

9 February 2000

Applicability

This Technical Note only applies to the T2000 conventional radio product range.

1. Introduction.

Information

The current selcall module that is used in the T201X and T2020 radios (the T2000-A36) has certain components that are becoming obsolete. This has prompted Tait to develop a new selcall module.

The new selcall module is called the **T2000-A37**. This selcall module has a very similar feature set to that of the T2000-A36.

The T2000-A37 is compatible with all series II conventional radios.

Production will soon commence on this module. The first serial number for radios with the T2000-A37 is **711813**.

CSO's: Please pass this information onto all relevant personnel and dealers.

2. Issuing authority

Name and position of issuing officer
