

Technical Note TN-646

T2035 Factory Production Software Upgrades.

7th November 2000

Applicability

This Technical Note only applies to the T2035 Radios that are currently being produced by the T2000 production line.

1. T2035 Programming Software.

Details

The last FULL release T2035 programming software to be used in production was V1.50. This software has been surpassed by **V1.57 T2035 Programming Software**

The Main changes to note are:

- Supports 8-digit serial numbering.
- Will program the radio firmware required to be use with the SST Flash device.
- LMS dialing facilities added.
- User Group Select feature added.
- Various new frequency band additions.
- Various bug fixes.

The new software will be required to program radios starting from serial number **17040279**.

Please Note:

- Kan Ban stock will not be upgraded unless otherwise requested by the CSO.
- The programming software is available to download off the Technical Database under the Software section.

2. T2035 Radio Software.

Details

The last Full release T2035 radio software to be used in production was V3.26. The radio software has been surpassed by **V3.44 T2035 Radio Firmware.**

The main changes to note are:

- **SST / ST Flash capable.**
- **E1HC11 micro capable.**
- **Various bug fixes and enhancements.**

The new T2035 radio firmware will be placed in radios from serial number **17040279** onwards.

Please Note:

- Kan Ban stock will not be upgraded, unless otherwise requested by the CSO.
- The radio firmware is available to download off the technical issue database under the software section.

CSO's: Please inform all logistics, sales technical staff and dealers of these changes.
