## Technical Note TN-622

### **New Serial Numbers For T2000 Product Range**

15 June 2000

---

#### **Applicability**

This Technical Note only applies to new production of the T2000 product range.

---

## **1. Introduction.**

#### **Information**

The T2000 serial numbering scheme has been changed to accommodate a larger, **8-digit** serial number.

This will not affect the radios in anyway. However, customers need to be aware that with the current customer PGM software that is available, only the 6 least significant digits will be displayed in the serial number section on the specifications page. Until the new versions of PGM are available, the radios will only be programmed with the 6 least significant numbers. Please assure customers that the serial number is actually correct. New PGM will be available soon that will allow the full serial number to be programmed and displayed

First product was produced on the **25th May** .  
Starting serial number was **17006450** .

The differentiation between Trunking and non trunking is now irrelevant because both types use the same serial number range.

## **2. Issuing authority**

#### **Name and position of issuing officer**
