

Technical Note TN-628
T3000-1032 NiMH
Battery Capacity changes
11 August 2000

Applicability

This Technical Note only applies to the T3000-1032 NiMH battery product range

1. Information.

What's Changed

The T3000-1032 has traditionally been an 1850mAh rated Nickel Metal Hydride (NiMH) battery pack. Over recent years, the NiMH packs have become more popular in some countries because of environmental reasons. Tait is committed to continue supplying a NiMH battery pack for the T3000 because of this increased demand.

However, the cell supplier has discontinued the 1850mAh line of cells and has super-ceeded the 1850mAh cell with a higher capacity cell. The T3000-1032 will now be rated at **2000mAh**. This change has already gone through into production. Below are the first serial numbers (and Tait Job numbers) of the T3000-1032 units with the 2000mAh capacity.

J/N:135360 => **S/N:10233580**

J/N:135361 => **S/N:10233630**

J/N:135308 => **S/N:10232780**

CSO's: Please inform all relevant dealers, technical and sales staff of this change.
