

## TBBA03-01 Wall-Mounting Kit Installation Instructions

### Installation

The TB7100 base station can be wall-mounted by rotating the front mounting brackets and fitting the mounting brackets supplied with the kit to the rear of the chassis.

### Contents of Kit

Qty.	Part Number	Description
2	302-05279-00	TB7100 rack mounting bracket
4	346-00005-08	Button head socket scrw M5×8

### Installation

To wall-mount the base station, rotate the front mounting brackets provided with the base station, and fit the mounting brackets supplied with the kit to the rear of the chassis.

When wall-mounting the base station, ensure the airflow is from bottom to top ❶ (front panel facing down), or side to side ❷. The base station will perform best in these orientations.

We do not recommend mounting the base station with the airflow from top to bottom (front panel facing up), as testing has shown that recirculation of air may lead to overheating.

When mounting the base station, ensure that the areas in front of the air intakes and air exhausts are free of obstruction to allow unrestricted airflow.

### Recommended wall-mounting options for a TB7100 base station
