TECHNICAL NOTE

Technical Note TN-925

TM8000 Mobile Radio 10 Watt External Audio Output

1 October 2004

Applicability

This Technical Note details the external audio of the TM8000 and also the TMAA10-03 High Power Remote Speaker.

1. Information

The TM8000 platform utilises a 10-Watt audio amplifier to drive the external speaker, and it does this in a 'bridged' configuration.

It is important for TM8000's fitted into an existing installation that the external speaker used is capable of accepting the audio power level provided and that the speaker wiring is not connected to ground.

Technical Support is aware T2000-05 4W speakers have been re-used by some installers and consequently blown.

Tait suggest utilising the TMAA10-03 High Power Remote Speaker identified below with connection details.

Compliance None.

CSO Instruction Please inform all technical staff and dealers of the recommended external speaker and audio level provided by the TM8000.

2. Issuing Authority

Name and Position of Issuing Officer Graham Brenchley
Technical Support Engineer
