INTRODUCTIONS

INTRODUCTIONS --- KMC-18/18A (DTMF MICROPHONE)

The KMC-18/18A is a DTMF microphone for mobile transceivers with a 6-pin modular connector. The KMC-18 is a standard microphone, the KMC-18A, a multi-function one. They have the following features. (In the table below, indicates that the function is available, and indicates it is not .)

	Feature	KMC-18	KMC-18A
1	Conforms to MIL-STD-81- C/D/E. Rain 506.1/Proce. 2, 506.2/Proce. 2, 506.3/Proce.2 Dust 510.1/Proce. 1, 510.2/Proce. 1, 510.3/Proce.1 Vibration514.2/Proce. 8.10, 514.3/Proce. 1, 514.4/Proce.1 Shock 516.2/Proce. 1.2.3.5, 516.3/Proce. 1.3.4.5.6, 516.4/Proce.1.4	○	○
2	Backlit keyboard (The KMC-18A has a three-level programmable illumination switching function (bright, dark, and OFF).	○	○
3	The hook fitting has a switch function, and the on-hook ground wire is no longer necessary.	○	○
4	The curly cord has an 8-pin modular connector (microphone) and a 6-pin modular connector (transceiver). It can be replaced easily.	○	○
5	A beep sounds to confirm operation. (The KMC-18A is programmable to set it ON or OFF.)	○	○
6	DTMF key operation is inhibited while the PTT button is being held down. (The KMC-18A is programmable to disable or enable the DTMF key.)	○	○
7	When the DTMF key is pressed, the PTT turns on automatically and the microphone is disabled.	○	○
8	The hook can be held on or off.	×	○
9	The DTMF code transmission time is variable.	×	○
10	The 4th column tone transmission is variable.	×	○
11	Eight types of DTMF code up to 22 digits (such as telephone numbers) can be stored in memory.	×	○
12	Connect/disconnect ANI codes up to 17 digits can be stored in memory.	×	○
13	One of the nine operation modes can be selected by combinations of three kinds of operation function (Auto Dial, Store and Send, and Manual Dial) and the Last Number Redial function.	×	○

ADJUSTMENT

The DTMF tone deviation has been adjusted at the factory, so does not normally need to be adjusted.

- DTMF tone deviation adjustment (for KMC-18/18A)
 1. Remove the three screws securing the back of the KMC-18/18A case, then remove the back.
 2. Connect the deviation meter to the transceiver to be used, then connect the KMC-18/18A to the transceiver.
 3. Hold down key **[5]**. The transceiver transmits the DTMF tone corresponding to key **[5]**. With key **[5]** still down, adjust semi-fixed resistor VR1 on the KMC-18/18A board to set the deviation to 2.2 kHz.
 4. Put the back of the case on.
- The KMC-18A allows you to adjust the deviation using the single tone transmission function. Perform steps 1 and 2 above, then put the KMC-18A into set-up mode. (To enter set-up mode, hold down keys **[1]**, **[3]**, and **[*]** and switch the power on.)
Next, press keys **[8]**, **[0]**, and **[#]** in that order, then press the following keys:
Press **[1]** to transmit the Row 1 tone.
Press **[2]** to transmit the Row 2 tone.
Press **[3]** to transmit the Row 3 tone.
Press **[4]** to transmit the Row 4 tone.
Press **[5]** to transmit the Column 1 tone.
Press **[6]** to transmit the Column 2 tone.
Press **[7]** to transmit the Column 3 tone.
Press **[8]** to transmit the Column 4 tone.

Adjust VR1 while each tone is being transmitted, setting the deviation to 1 kHz for the Row 1 tone (key **[1]**) and to 1.5 kHz for the Column 1 tone (key **[5]**).
