# TK-272G

## GENERAL / SYSTEM SET-UP

### INTRODUCTION

#### SCOPE OF THIS MANUAL

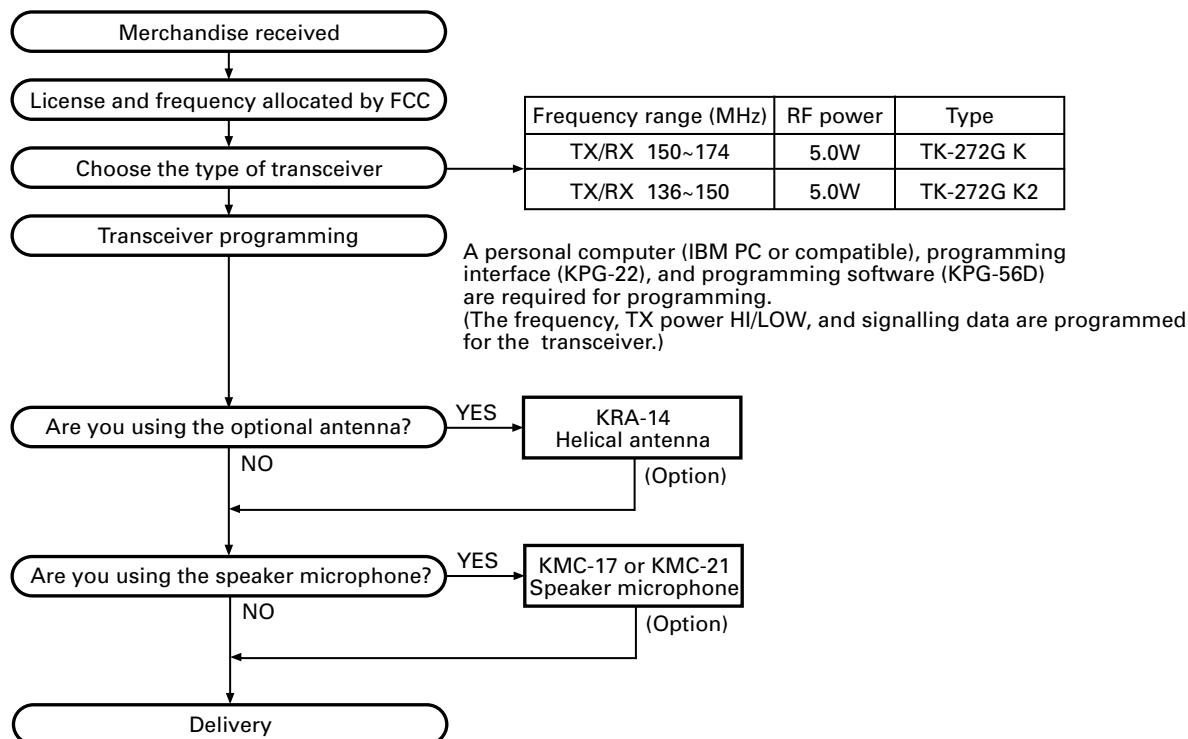

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

### ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts, components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

Unit Model & destination	TX-RX Unit	Display Unit	Frequency range	Remarks
TK-272G	K	X57-5870-11	X54-3250-10	150~174MHz
	K2	X57-5870-13		136~150MHz

### SYSTEM SET-UP

### PERSONNEL SAFETY

The following precautions are recommended for personnel safety:

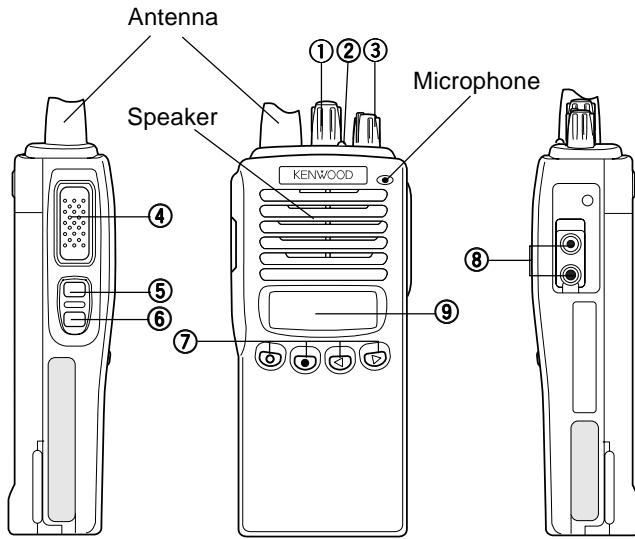

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

### SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

# OPERATING FEATURES

## 1. Operation Features

The transceiver is shown with the optional KNB-14 battery pack.

### ① Rotary encoder

Your dealer can program the encoder as either Group Up/Down (only when the trunking board is installed) or Channel Up/Down (default setting). Rotate to select a group or channel. Also rotate to adjust the squelch in Squelch Adjustment mode.

### ② LED indicator

Lights red while transmitting. Lights green while receiving. Flashes orange while receiving a Code Squelch or Selective Call code, or a 2-Tone or DTMF signal that matches the one set up in your transceiver. Flashes red when the battery power is low while transmitting.

### ③ Power switch/ Volume control

Turn clockwise to switch ON the transceiver. Rotate to adjust the volume. To switch OFF the transceiver, turn counterclockwise fully.

### ④ PTT (Push-to-Talk) switch

Press this switch, then speak into the microphone to call a station.

### ⑤ Side 1 key

This is a PF (Programmable Function) key. Press it to activate its auxiliary function.

### ⑥ Side 2 key

This is a PF (Programmable Function) key. Press it to activate its auxiliary function.

### ⑦ ○, ●, ▲, ▼ keys

These are PF (Programmable Function) keys. Press each key to activate its auxiliary function.

### ⑧ SP/MIC jacks

Connect an optional speaker/ microphone here.

### ⑨ Display

**Note:** The PF keys are programmed with default functions:

- **Side 1 key:** Lamp
- **Side 2 key:** Monitor A
- ○ key: Scan
- ● key: Scan Del/Add
- ▲ key: Talk Around
- ▼ key: RF Power Lo

## Programmable Auxiliary Functions

**Side 1, Side 2, ○, ●, ▲, and ▼** can be programmed with the auxiliary functions listed below.

- Channel Down
- Channel Up
- Display Character
- Group Down <sup>2</sup>
- Group Up <sup>2</sup>
- Home Channel
- Key Lock
- Lamp
- Monitor A (Monitor Unmute–Momentary)
- Monitor B (Monitor Unmute–Toggle)
- Monitor C (Carrier Squelch–Momentary)
- Monitor D (Carrier Squelch–Toggle)
- None
- Operator Sel Tone <sup>1</sup>
- Redial
- RF Power Lo
- Scan
- Scan Del/Add
- Talk-Around
- 2-Tone Encode
- Trunking Group Code Select <sup>2</sup>

<sup>1</sup> Available for K market models only.

<sup>2</sup> Available only when using Trunking function.

## 2. Programmable keys

The functions the FPU programs to the function keys are described in the following sections.

### 1) Channel up/down

When the key is pressed each time, the channel number to be selected is incremented/decremented and repeats if held for one second or longer.

### 2) Display character

This key switches the LCD display between the group/channel number and group/channel name.

### 3) Group up/down

When the key is pressed each time, the group number to be selected is incremented/decremented and repeats if held for one second or longer.

## OPERATING FEATURES

**4) Home Channel**

Press this key once, the channel switches to the pre-programmed home channel.

**5) Key lock**

When the KEY LOCK switch is held down for one second or more, keys other than [PTT], [Side1], [Side2], [VOL], [POWER], and KEY LOCK are locked.

When 12/16 KEY LOCK is set with the FPU, the DTMF key is locked and when front-panel KEY LOCK is set, the DTMF key and the [PF] key are locked.

**6) Lamp**

This key illuminates the LCD and keys on the front panel. When the key is pressed, the LED lamp goes on.

When it is released, the lamp goes off after about five seconds. If any key is pressed while the LED lamp is on, the lamp is kept on for five seconds.

**7) Monitor**

Used to release signalling or squelch when operating in conventional mode. It is also used to reset option signalling.

**8) Operator Selectable Tone**

This key switches the pre-set decode QT/DQT and encode QT/DQT to OST (Operator Selectable Tone) tone pair.

Press this key, the transceiver enters OST mode. In this mode, the display shows "OFF" and the operator can select one of the OST tone pair using the tuning control. The display shows "TONE \*\*" and tone pair No. \*\* is selected.

Press OST key again, the transceiver exits from OST mode, and returns to the group/channel mode.

16 tone pairs for OST can be programmed by KPG-56D. OST is useful to access the repeater with same radio frequency and different tone (QT/DQT).

**9) 2-Tone Encode Select**

- ① Press the key programmed as 2-tone Encode Select.  
• A pre-programmed 2-tone code name appears on the display.
- ② Press the key programmed as Rotary encoder to select you desired 2-tone code name.
- ③ Press PTT switch and 2-Tone Encode Select key to transmit and release them to receive.

**10) RF power low**

Used to temporarily switch transmission output to low power. Turning the function on enables:

Hi→Low, Low→Low

Key states are backed up, except in the PC mode when they are reset.

**11) Scan**

Pressing this key starts scanning. Pressing this key again stops scanning.

**12) Scan Del/Add**

This key switches the currently displayed channel between "Delete" and "Add".

The "Add" channel is contained in the scan sequence, the "Delete" channel is not contained. In the scan mode, this key switches the channel between delete or add, temporarily.

**13) Talk Around**

Press this key, the transceiver uses the receive frequency and tone for transmission.

The operator can call the other party directly (without repeater). Press this key again, the talk around function goes off.

**14) None**

An error operation beep sounds, and no action will occur. Use this function when the transceiver is required to be operated more simply.

**3. Display**

Icon	Description
	Appears while using Smar Trunk.
	Appears when the selected channel is busy.
	Appears when QT, DQT, DTMF, or 2-Tone decoding is deactivated (by pressing the Monitor key).
<b>CALL</b>	Appears when you receive a Code Squelch, Selective Call, 2-Tone, or DTMF Signalling call. Also appears when you transmit using Code Squelch or Selective Call.
<b>SCN</b>	Appears while scanning.
<b>LO</b>	Appears when using low power on the selected channel.
<b>A</b>	Appears when the selected channel is included in the scanning sequence.
	Displays the selected channel, the squelch level, DTMF digits (when entering digits, confirming digits, or making a call), and messages received via Selective Call.

**4. Scan Operating****1) Scan types**

- Single Group Scan

You can scan all valid (ADD) channels in the displayed group that can be selected with the group selector.

# OPERATING FEATURES

## • Multiple Group Scan

You can scan all valid (ADD) channels in all valid (ADD) groups.

## 2) Scan Start Condition

One or more non-priority channels must be added to all channels that can be scanned. The transceiver must be in normal receive mode (PTT off).

When you activate the key programmed to the scan function, scan starts. The scan icon ("SCN") lights and "SCAN" is indicated on display.

## 3) Scan Stop Condition

The scan stops temporarily if the following conditions are satisfied.

- ① The receiving signal matches the signalling code in your radio that is set by the programming software (KPG-56D).
- ② When the Monitor key is depressed.

## 4) Scan Channel Types

- ① Priority channel is the most important channel for scan, and always detects a signal during scan and when the scan stops temporarily.
- ② Non-priority channels detect a signal during scan. For the channels that can be selected with the group or channel selector when the scan does not occur, the "A" icon lights.

## 5) Priority Channel Setting

A priority channel can be set as follows with the programming software (KPG-56D).

- ① Specify a priority channel as a fixed priority channel.
- ② Make a selected channel a priority channel.

Specify the initial channel before the operator changes it.

## 6) Scan Type According to the Priority Channel

- ① When no priority channel is set : Only the non-priority channels are scanned.

If a non-priority channel stops temporarily, it stops until there is no signal on the channel.

- ② When priority channel is set : Either priority channel is scanned.

If a non-priority channel stops temporarily, a priority channel signal is detected at certain intervals.

If a priority channel stops temporarily, it stops until there is no signal on the priority channel.

## 7) Revert Channel

The revert channel is used to transmit during scanning and set by the programming software (KPG-56D).

- ① Priority  
The transceiver reverts to the priority channel.
- ② Priority with talkback  
The transceiver reverts to the priority channel.  
If you press PTT during a resume timer (dropout delay time, TX dwell time) or calling, you can transmit on the current

channel to answer to the call however revert channel is set to priority channel.

After resume time, scan re-starts and the transmission channel returns to the priority channel.

### ③ Selected channel

The transceiver reverts to the channel before scanning or the channel that you changed during scan.

### ④ Last called channel

The transceiver reverts to the last called channel during scan.

### ⑤ Last used channel

The transceiver reverts to the last used (transmitted) channel during scan. "Last used" revert channel includes talkback function.

### ⑥ Selected with talkback

The transceiver reverts to the channel before scanning or the channel that you changed during scan.

## 8) Scan End

When you reactivate the key programmed to the scan function during scan mode, scan ends.

The scan icon ("SCN") and "SCAN" or revert channel (programmable) display goes off.

## 9) Temporarily Delete/Add

It is possible to delete or add a channel temporarily during scan. When scan stops on an unnecessary channel, for example by interference of the other party, press the delete/add key, then that channel is deleted temporarily and scan will re-start immediately.

When you would like to add a deleted channel temporarily to the scan sequence, select the desired (deleted) channel during scan, and press the delete/add key before scan re-starts.

That channel is added temporarily to the scan sequence. The temporarily deleted or added channels are returned to their pre-set delete/add conditions when the transceiver exits from scan mode.

## 5. Details of Features

### 1) Time-out timer

The time-out timer can be programmed in 15 seconds increments from 15 seconds to 300. If the transmitter is keyed continuously for longer than the programmed time, the transmitter is disabled and a warning tone sounds while the PTT button is held down. The alert tone stops when the PTT button is released.

### 2) PTT ID

PTT ID provides a DTMF ANI to be sent with the PTT button every time it is used (Begin of TX ID at beginning of transmission, End of TX ID at end of transmission, or both).

You can program the PTT ID as one of the followings.

Off, BOT (Begin of TX ID), EOT (End of PTT ID), BOTH.

The contents of ID are programmed for each channel.

# OPERATING FEATURES

The transceiver is capable of having ID. The format is DTMF.

The timing that the transceiver sends the ID is programmable.

Begin of TX ID (BOT) : Begin of TX ID is sent at the beginning of transmission.

End of TX ID (EOT) : End of TX ID is sent at the end of transmission.

Both : Begin of TX ID is sent at the beginning of transmission and End of TX ID is sent at the end of transmission.

There is also a "PTT ID" setting for each channel.

## 3) Battery Warning

This transceiver has a battery warning feature. If low voltage is detected during transmission, the transceiver warns you by a flashing red "LED".

When the voltage is detected to be even lower during transmission, the transceiver stops transmission and warns you by a flashing red "LED" and a beep.

Please notice "indication" for the battery exchange, charging time by flashing red LED and beep.

## 4) "TOT" Pre-Alert

The transceiver has a "TOT" pre-alert timer. This parameter selects the time at which the transceiver generates a "TOT" pre-alert tone before the "TOT" is expired.

"TOT" will expire when the selected time passes from the TOT pre-alert tone.

## 5) "TOT" Re-Key Time

The transceiver has a "TOT" re-key timer. This timer is the time you cannot transmit after the "TOT" is exceeded. After the "TOT" re-key time expires you can transmit again.

## 6) "TOT" Reset Time

The transceiver has a "TOT" reset timer. This timer is the minimum wait time allowed during a transmission that will reset the "TOT" count.

"TOT" reset time causes the "TOT" to continue even after the PTT is released, unless the "TOT" reset timer has expired.

## 7) OST (Operator Selectable Tone)

The transceiver is capable of having the "OST" function and 16 tone pairs (QT/DQT) with a max 10-digit name for each tone pair.

## 8) Clear to Transpond

The transceiver waits for an acknowledgment signal until the channel free.

This feature ensures the acknowledgment signal is received by another party.

## 9) Battery Save

This is the automatic battery saver during standby mode operation. The receiver circuit is turned on and off to conserve the battery life.

## 6. Option Signalling (DTMF/2 tone)

Built-in DTMF decoder is available for option signalling.

Built-in 2-Tone decoder is available for option signalling.

It is possible to use individual call, group call, DBD (Dead Beat Disable). **Note :** DBD is only DTMF

Preset operation is triggered when there is a match with Option Signaling.

When Option Signaling matches on a Group Channel where it is set to Yes, the Option Signaling display flashes and Option Signaling is canceled. Settings after this will cause "Transpond" or "Alert" to sound.

Setting the Selective Call Alert LED will cause the LED to start flashing orange.

Mute or Unmute is triggered by the ID/QT/DQT/Carrier when option signaling matches (when Option Signal is deactivated by a transmission).

### AND/OR

Option Signaling match conditions can be selected with AND/OR logic.

	Alert/Transpond	AF Mute Open
AND	Triggers at match with QT/DQT/ID+DTMF(2tone);Opt	Triggers at match with QT/DQT/ID+DTMF(2tone);Opt
OR	Triggers at match with DTMF(2tone);Opt	Triggers only for match with QT/DQT/ID;Signaling

Even if set as OR, there is no Alert/Transpond just with DTMF.

Even if set as OR, AF mute cannot be canceled just by a match with DTMF.

In conventional channels not set with QT/DQT, signaling is a match just by receiving the carrier.

### Auto Reset

When Option Signaling matches on a Group channel where it is set to Yes, Option Signaling is canceled when it matches a group channel set to Yes.

After Option Signaling matches, Option Signaling can automatically Reset after a specified time.

### Dead Beat Disable

When the D.B.D (Dead Beat Disable) code matches, a preset operation is performed.

When D.B.D matches on all group channels regardless of whether Option Signaling = Yes/No, then TX Inhibit or TX RX Inhibit is activated by the settings performed afterwards. D.B.D is canceled when the D.B.D. code + "#" is received.

Transpond is always activated when the D.B.D code matches. Alert is not output. An Option Signaling match is not displayed.

# OPERATING FEATURES / REALIGNMENT

## 7. Audible user feedback tones

The transceiver outputs various combinations of tones to notify the user of the transceiver operating state. The main tones are listed below

The high tone is 1477Hz, the mid tone is 941Hz, and the low tone is 770Hz.

- Power on tone**

This tone is output when the transceiver is turned on. (The high tone is output for 500ms.)

- Alert tone**

This tone is output when the transceiver is in TX inhibition for TOT, battery warning and PLL unlocked. It is output until the PTT button is released. (The 697Hz tone is output.)

- Busy Tone**

This informs the user of a busy channel lock out

- Group Call Tone**

The group call tone informs the user of a group call in DTMF/2 Tone Option Signaling. This tone repeats 7 times.

770Hz		770Hz
30ms	30ms	30ms

- Individual Tone**

Individual tone is issued on receiving selective call by DTMF/2 Tone Option Signaling.

2000Hz		2000Hz		2000Hz
100ms	100ms	100ms	100ms	100ms

- Pre Alert tone**

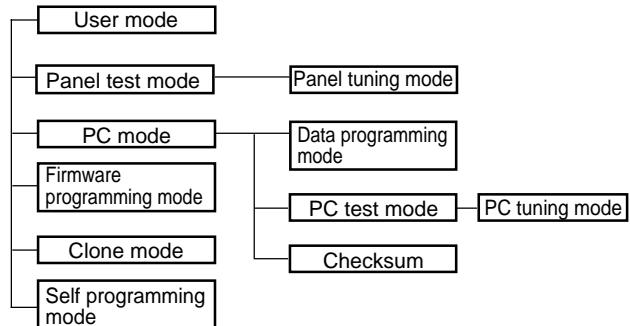

Informs the user when nearing transmit inhibit (transmit cutoff) time due to TOT.

The Pre Alert Tone is issued from the time set for TOT Pre Alert until the TOT triggers.

1633Hz		1633Hz		1633Hz
50ms	50ms	50ms	50ms	50ms

## REALIGNMENT

### 1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the radio.
PC mode	Used for communication between the radio and PC (IBM compatible).
Data programming mode	Used to read and write frequency data and other features to and from the radio.
PC test mode	Used to check the radio using the PC. This feature is included in the FPU. See panel tuning.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode	Used to transfer programming data from one radio to another.
Self programming mode	Frequency, signalling and features.

### 2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[◀]+Power ON (Two seconds)
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode]+[○]
Firmware programming mode	[Side1]+[Side2]+Power ON (Two seconds)
Clone mode	[Side1]+[▶]+Power ON (Two seconds)
Self programming mode	[Side1]+[●]+Power ON (Two seconds)

### 3. For the panel Test Mode

For the setting method, refer to ADJUSTMENT.

#### 3-1. For the panel Tuning Mode

For the setting method, refer to ADJUSTMENT.

## 4. Checksum

Executing this function, "TUNING" appears on the display of TK-272G while calculating the checksum .

When the calculation is completed, the display returns to normal and PC displays the checksum of the radio.

# TK-272G

## REALIGNMENT

### 5. PC Mode

#### 5-1. Preface

The TK-272G transceiver is programmed using a personal computer, a programming interface (KPG-22) and programming software (KPG-56D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

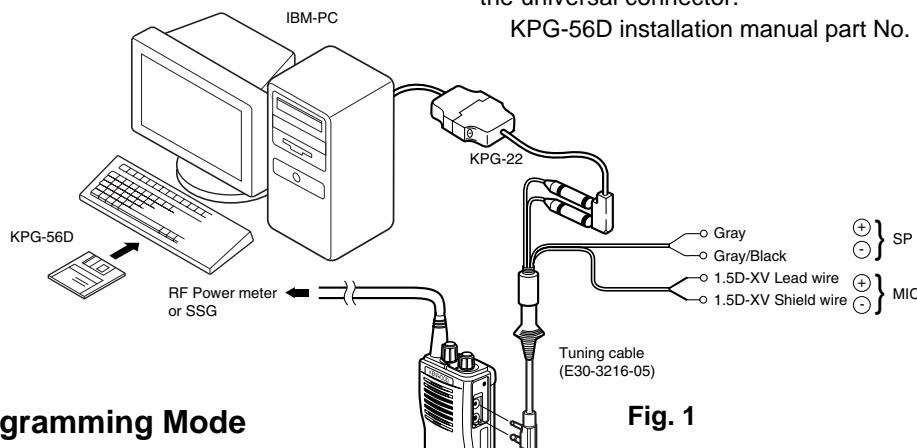

#### 5-2. Connection procedure

1. Connect the TK-272G to the personal computer with the interface cable.
2. When the POWER is switched on, user mode can be entered immediately. When the PC sends a command, the radio enters PC mode.

When data is transmitted from transceiver, the red LED blinks.  
When data is received by the transceiver, the green LED blinks.

#### Notes:

- The data stored in the personal computer must match the model type when it is written into the flash memory.
- Change the TK-272G to PC mode, then attach the interface cable.

### 6. Firmware Programming Mode

#### 6-1. Preface

Flash memory is mounted on the TK-272G. This allows the TK-272G to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

#### 6-2. Connection procedure

Connect the TK-272G to the personal computer (IBM PC or compatible) with the interface cable (KPG-22). (Connection is the same as in the PC Mode.)

#### 6-3. Programming

1. Start up the programming software (KPG-56D), select "firmware program" in the "Program" item, and press the Return key on your personal computer. This starts up the firmware programmer.
2. The top screen is displayed. Press any key to advance to the next screen.
3. Set the communications speed (normally, 57600 bps) and communications port in the Setup item.

#### 5-3. KPG-22 description

##### (PC programming interface cable: Option)

The KPG-22 is required to interface the TK-272G to the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-22 connects the SP/MIC connector of the TK-272G to the computers RS-232C serial port.

#### 5-4. Programming software description

The KPG-56D programming disk is supplied in 3-1/2" disk format. The software on this disk allows a user to program the TK-272G radios via a programming interface cable (KPG-22).

#### 5-5. Programming with IBM PC

If data is transferred to the transceiver from an IBM PC with the KPG-56D, the destination data (basic radio information) for each set can be modified. Normally, it is not necessary to modify the destination data because their values are determined automatically when the frequency range (frequency type) is set.

The values should be modified only if necessary. Data can be programmed into the flash memory in RS-232C format via the universal connector.

KPG-56D installation manual part No. : B62-1153-XX

Fig. 1

4. Set the firmware to be updated by File select (=F1).
5. Hold down the [Side1] and [Side2] switches on the TK-272G, and press the power switch.  
When the [Side1] and [Side2] switches are held down for two seconds, "PROG576" appears on the display and the LED lights orange. When "PROG576" is displayed, release the switches .
6. Check the connection between the TK-272G and the personal computer, and make sure the TK-272G is in Program mode.
7. Press F10 on the personal computer. A window opens on the display to indicate the writing progress. When the TK-272G begins to receive data, the LED lights green.
8. When data is received successfully, a checksum appears on the display.
9. If you want to continue programming other TK-272Gs, repeat steps 5 to 8.

# REALIGNMENT

**Notes:**

- To start the Firmware Programmer from KPG-56D, the Fpro path must be set up by the KPG-56D Setup.
  - This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software (KPG-56D).
  - When programming the firmware, it is recommended to copy the data from the floppy disk to your hard disk before you update the radio firmware.
- Directly copying from the floppy disk to the radio may not work because the access speed is too slow.

## 6-4. Function

- If you press the [Side2] switch while "PROGXXX" is displayed, the checksum is displayed. If you press the [Side2] switch again (while the checksum is displayed), "PROGXXX" is redisplayed.
- A transmission speed can be selected by pressing the [Side1] switch while "PROGXXX" is displayed.
  - 19200 bps: The LED flashes green and red alternately.
  - 38400 bps: The LED flashes orange.
  - 57600 bps: The LED lights orange.

**Note:**

Normally, write in the high-speed mode.

## 7. Clone Mode

Programming data can be transferred from one radio to another by connecting them via their SP/MIC connectors. The operation is as follows (the transmit radio is the master and the receive radio is the slave).

- Turn the master TK-272G power ON with the [Side1]+[▶] keys held down. The TK-272G displays "CLONE".
- Power on the slave TK-272G.
- Connect the cloning cable to the SP/MIC connectors on the master and slave.
- Press the [○] key on the master while the master displays "CLONE". The data of the master is sent to the slave. While the slave is receiving the data, "-PC-" is displayed. When cloning of data is completed, the master displays "END", and the slave automatically operates in the User mode. The slave can then be operated by the same program as the master.
- The other slave can be continuously cloned. When the [○] key on the master is pressed while the master displays "END", and the slave the master displays "CLONE". Carry out the operation in steps 2 to 4.

**Note:** Use the new cloning cable for TK-272G.

You cannot use the old cloning cable for TK-260/270.

**Note:** You can clone the programmed data between the transceiver frequency version must be same.

Cloning cable parts No.

E30-3410-05 (TK-272G → TK-272G)

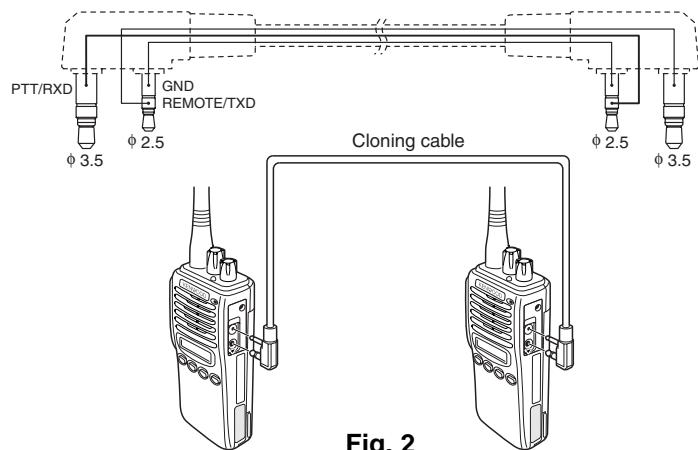

Fig. 2

## 8. Self Programming Mode

Write mode for frequency data and signalling etc. Mainly used by the person maintaining the user equipment.

### 8.1 Self programming mode setting

Remove D17 from the TX-RX unit (Figure 3). Hold down the [Side1]+[●] switches and turn the power switch on.

When the self programming mode is entered, [SELF] appears on the display. The mode changes automatically to Model Select Mode and "PORTABLE" is displayed in about one second.

**Note :**

This mode (self programming mode) cannot be set when it has been disabled with the FPU.

**Note :**

Self programming is disabled if "a Trunking Board is installed in this Radio" is selected in the FPU.

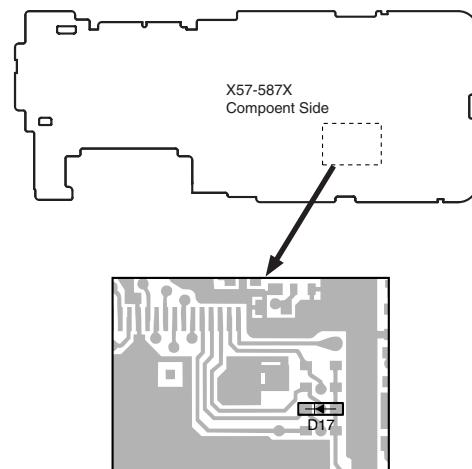

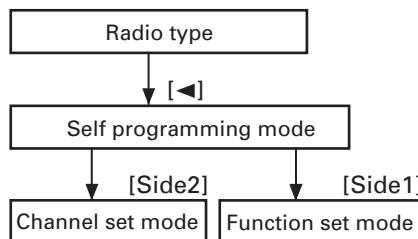

Fig. 3

## REALIGNMENT

## • Flow Chart

**8-2. Channel Setting Mode**

This is a mode for making channel settings with the panel keys without using the FPU.

Pressing [Side2] when "SELF" is displayed, sets Channel Setting Mode.

Select an item set using [▶] then change the selection with the encoder.

The data displayed using [◀] is stored in the memory and then proceeds to the next item. Pressing [▶] proceeds to the next item without storing it in the memory.

Press [Side2] to set the display to "SELF" and return to reset (default) status.

All channel data is cleared when pressing [◀] key with the blank RX frequency.

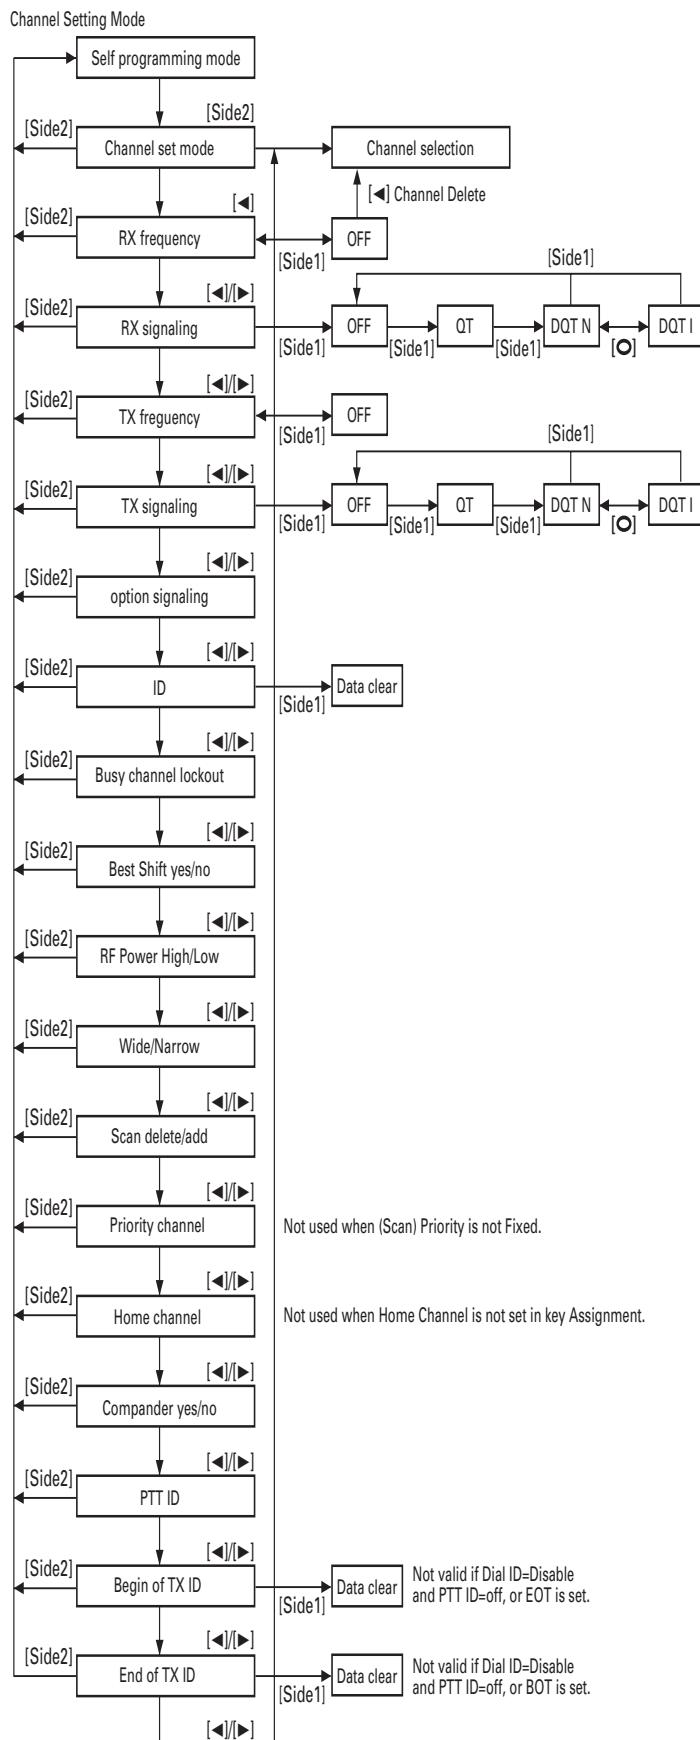

No.	Function	Choices	Display	Remarks
	Select Channel	1-128 1-128_	_1-1_	We recomend up to 32 CH for TK-272G.
1	RX frequency	Step 2.5kHz-1MHz  Blank  100.0000-550.0000MHz	STP_250 STP_1000  R. ——  R.100.0000	Display when an item is selected or when a step is changed (about 0.5 seconds) [●] Step change VHF : 2.5, 5.0, 6.25, 7.5kHz, 1MHz, Step [Side1] : Freq On/Blank switching The rightmost dot indicates 50Hz digit (On=5; Off=0).
2	Rx Signaling	OFF QT 67.0-250.3Hz (EIA Mode) QT 67.0-250.3Hz (0.1Hz Step Mode) DQT 000-777 (Normal) DQT 023-754 (Normal) DQT 000-777 (Inverse) DQT 023-754 (Inverse)	_____ QT_67_0_ QT_250_3 QT_67_0* QT_250_3* DQT000N* DQT023N DQT754N DQT000I* DQT777I* DQT023I DQT754I	[Side1] : Off/QT/DQT switching [●] : Mode switching [○] : Normal/Inverse switching

## • Flow Chart

## 8-3. Function Setting Mode

This is a mode for using the panel keys to make function settings without using the FPU, that operate on all channels.

Pressing the [Side1] when "SELF" is displayed, sets the Function Setting Mode.

Select an item set using [▶] then change the selection with the encoder.

The data displayed using [◀] is stored in the memory and then proceeds to the next item. Pressing [▶] proceeds to the next item without storing it in the memory.

Press [Side1] to display "SELF" and return to reset (default) status.

\*1. This function is not available on TK-272G.

#### 8-4. Memory Reset Mode

This mode is used to clear data for functions that can be set in Self Programming Mode or to return to reset values (default).

Pressing [O] when "SELF" is shown, sets the display to "CANCEL".

Turning the encoder alternately switches the display between "CANCEL"↔"READY".

Pressing [O] when "READY" is shown, clears the data and sets the display to "CLEAR".

Pressing [O] again, returns the display to "SELF".

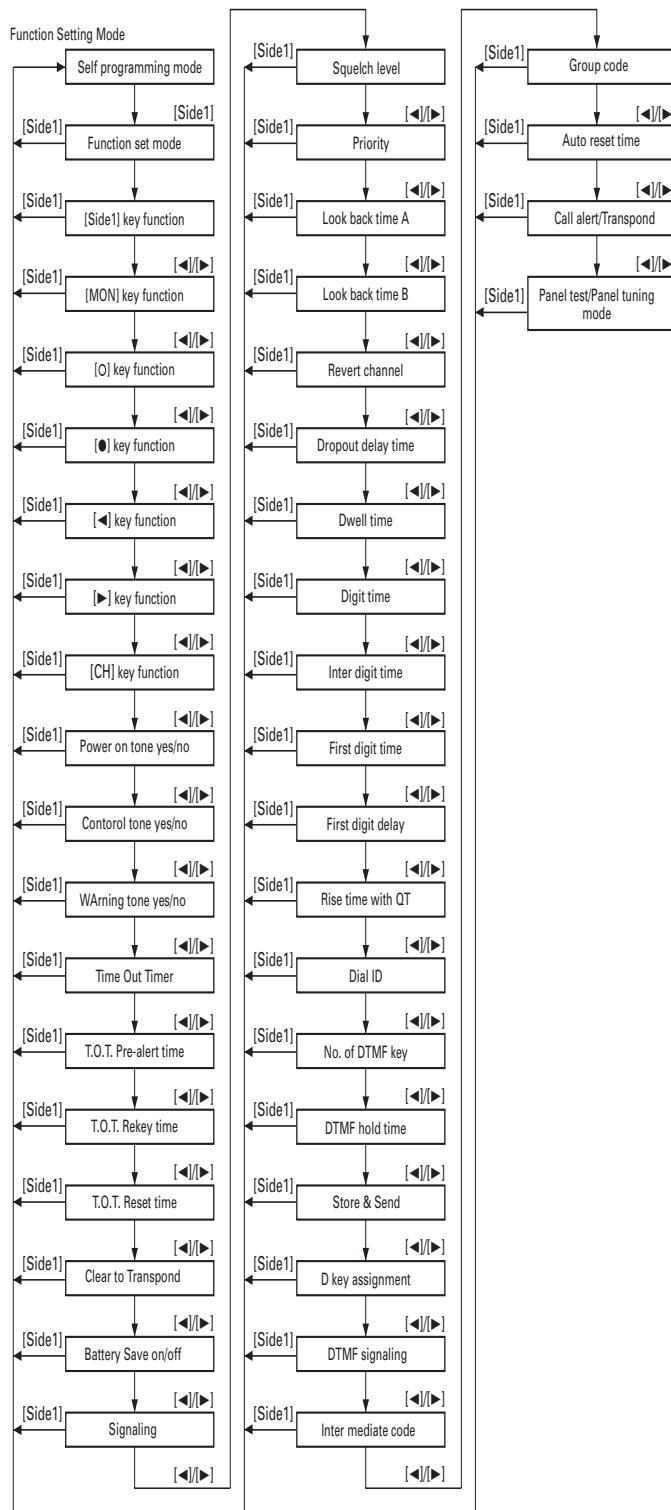

Pressing [O] when "CANCEL" is shown, returns the display to "SELF" without resetting the data.

When the memory is reset, mode data and model data are not reset.

# TK-272G

## REALIGNMENT

# DISASSEMBLY FOR REPAIR

## Separating the case assembly from the chassis.

1. Remove the two knobs ① and three round units ②.
2. Remove the two screws ③.
3. Expand the right and left sides of the bottom of the case assembly, lift the chassis, and remove it from the case assembly ④.

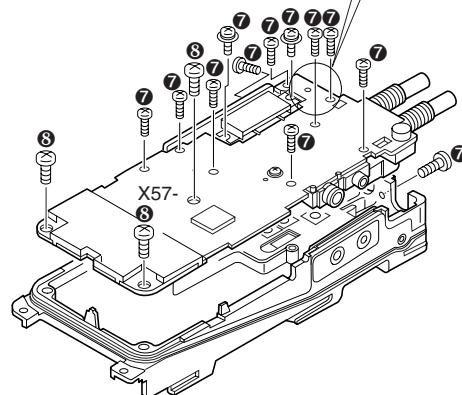

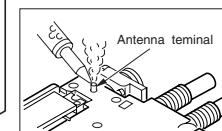

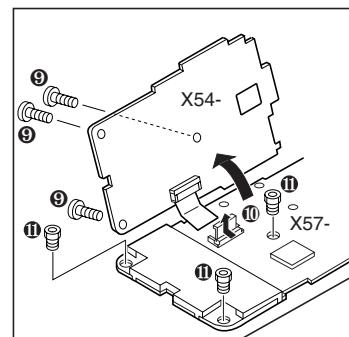

4. Taking care not to cut the speaker lead ⑤, open the chassis and case assembly, and pull the speaker lead with connector ⑥.

## Separating the chassis from the unit.

1. Remove the three screws ⑨.
- Lift the unit (X54), and rise up the connecter lever in the arrow with your finger ⑩.
- Remove the three hexagonal bosses ⑪, and remove the twelve screws ⑦.
- Remove the solder from the antenna terminal using a soldering iron, then lift the unit off (X57).

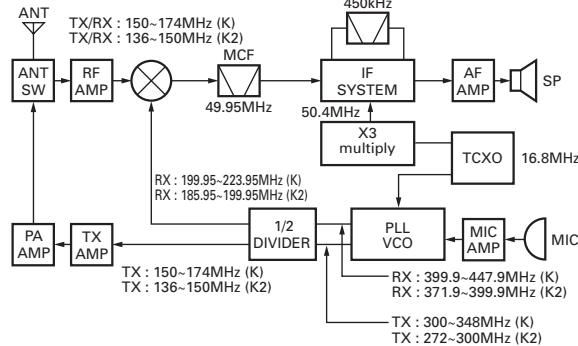

## CIRCUIT DESCRIPTION

**1. Frequency configuration**

The receiver utilizes double conversion. The first IF is 49.95 MHz and the second IF is 450 kHz. The first local oscillator signal is supplied from the PLL circuit.

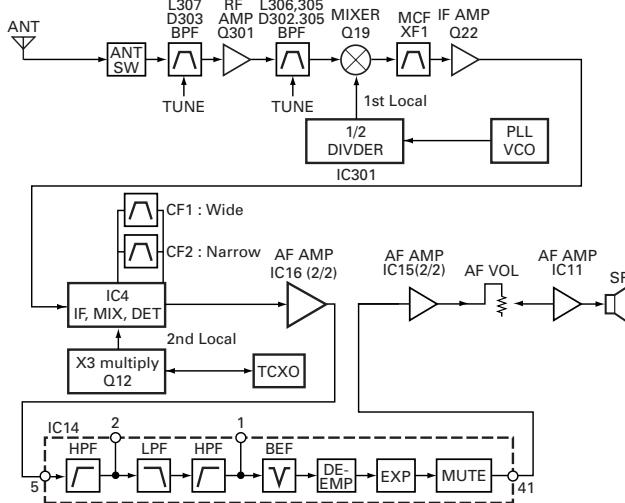

The PLL circuit in the transmitter generates the necessary frequencies. Fig. 1 shows the frequencies.

**Fig. 1 Frequency configuration**

**2. Receiver**

The frequency configuration of the receiver is shown in Fig. 2.

**Fig. 2 Receiver section**

**1) Front end (RF AMP)**

The signal coming from the antenna passes through the transmit/receive switching diode circuit, (D3,D7), passes through a BPF(L307), and is amplified by the RF amplifier (Q301).

The resulting signal passes through a BPF (L305 and L306) and goes to the mixer. These BPFs are adjusted by variable capacitors (D302, 303, 305). The input voltage to the variable capacitor is regulated by voltage output from the microprocessor (IC13).

**2) First mixer**

The signal from the front end is mixed with the first local oscillator signal generated in the PLL circuit by Q19 to produce a first IF frequency of 49.95 MHz.

The resulting signal passes through the XF1 MCF to cut the adjacent spurious and provide the optimum characteristics, such as adjacent frequency selectivity.

**3) IF Amplifier circuit**

The first IF signal is passed through a four-pole monolithic crystal filter (XF1) to remove the adjacent channel signal. The filtered first IF signal is amplified by the first IF amplifier (Q22) and then applied to the IF system IC (IC4). The IF system IC provides a second mixer, second local oscillator, limiting amplifier, quadrature detector and RSSI (Received Signal Strength Indicator). The second mixer mixes the first IF signal with the 50.4MHz of the second local oscillator output (TCXO X3) and produces the second IF signal of 450kHz.

The second IF signal is passed through the ceramic filter (CF1; Wide (without E), CF2 ; Narrow and E type) to remove the adjacent channel signal. The filtered second IF signal is amplified by the limiting amplifier and demodulated by the quadrature detector with the ceramic discriminator (CD1). The demodulated signal is routed to the audio circuit.

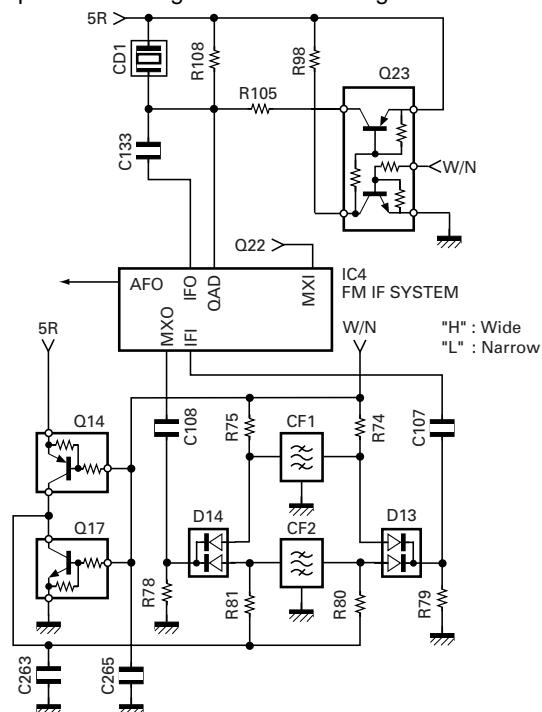

**4) Wide/Narrow changeover circuit**

Narrow and Wide settings can be made for each channel by switching the ceramic filters CF1 (Wide) and CF2 (Narrow).

The WIDE (high level) and NARROW (low level) data is output from IC5 (OUTPUT EXPANDER), pin 4.

When a WIDE (high level) data is received, Q14 turn off and Q17 turn on. When a NARROW (low level) data is received, Q14 turn on and Q17 turn off. D14 and D13 are switched to ceramic filters when a high/low level data is received.

Q23 turns on/off with the Wide/Narrow data and the IC4 detector output level is changed to maintain a constant output level during wide or narrow signals.

**Fig. 3 Wide/Narrow changeover circuit**

# CIRCUIT DESCRIPTION

## 5) Audio amplifier circuit

The demodulated signal from IC4 is amplified by IC16 (2/2), high-pass filtered, low-pass filtered, high-pass filtered, band-eliminate filtered, and de-emphasized by IC14. The signal then goes through an AF amplifier IC15 (2/2), an AF volume control (VR2), and is routed to an audio power amplifier (IC11) where it is amplified and output to the speaker.

## 6) Squelch

Part of the AF signal from the IC enters the FM IC (IC4) again, and the noise component is amplified and rectified by a filter and an amplifier to produce a DC voltage corresponding to the noise level.

The DC signal from the FM IC goes to the analog port of the microprocessor (IC13). IC13 determines whether to output sounds from the speaker by checking whether the input voltage is higher or lower than the preset value.

To output sounds from the speaker, IC6 sends a high signal to the SP MUTE line and turns IC11 on through Q32, Q33, Q34 and Q30. (See Fig. 4)

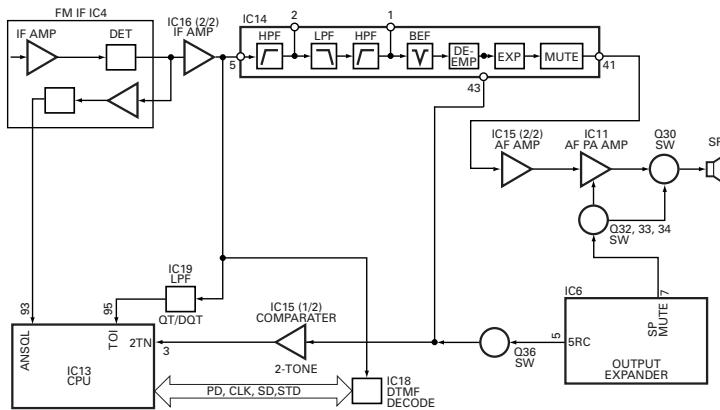

## 7) Receive signaling

### (1) QT/DQT

300Hz and higher audio frequencies of the output signal from IF IC are cut by a low-pass filter (IC19). The resulting signal enters the microprocessor (IC13). IC13 determines whether the QT or DQT matches the preset value, and controls the SP MUTE and the speaker output sounds according to the squelch results.

### (2) 2-TONE

Part of the received AF signal output from the AF amplifier IC16(2/2), and then passes through an audio processor (IC14), goes to the other AF amplifier IC15(1/2), is compared, and then goes to IC13. IC13 checks whether 2-TONE data is necessary. If it matches, IC13 carries out a specified operation, such as turning the speaker on. (See Fig. 4)

**Fig. 4 AF Amplifier and Squelch**

## (3) DTMF

The DTMF input signal from the IF IC(IC4) is amplified by IC16(2/2) and goes to IC18, the DTMF decoder. The decoded information is then processed by the CPU. During transmission and standby, the DTMF IC is set to the power down mode when the PD terminal is High. When the line is busy, the PD terminal becomes Low, the power down mode is canceled and decoding is carried out.

## 3. PLL frequency synthesizer

The PLL circuit generates the first local oscillator signal for reception and the RF signal for transmission.

### 1) PLL

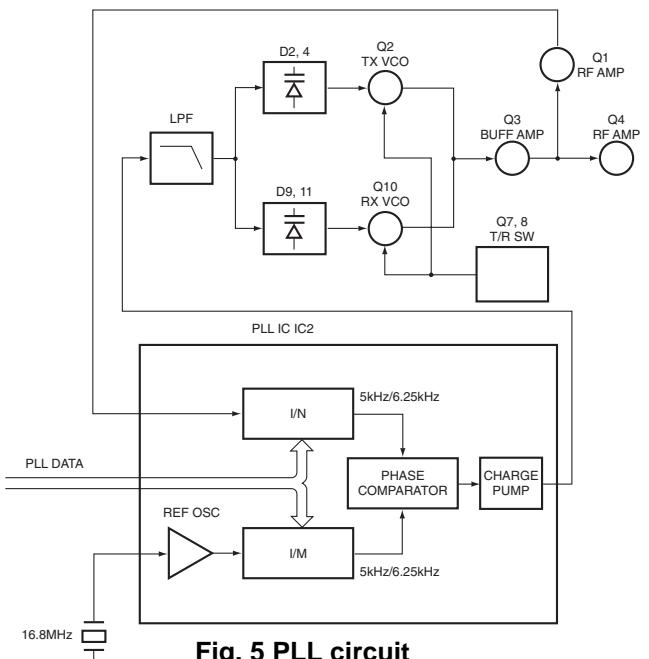

The frequency step of the PLL circuit is 5 or 6.25kHz. A 16.8MHz reference oscillator signal is divided at IC2 by a fixed counter to produce an oscillator (VCO) output signal which is buffer amplified by Q3 then divided in IC2 by a dual-module programmable counter. The divided signal is compared in phase with the 5 or 6.25kHz reference signal from the phase comparator in IC2. The output signal from the phase comparator is filtered through a low-pass filter and passed to the VCO to control the oscillator frequency. (See Fig. 5)

### 2) VCO

The operating frequency is generated by Q2 in transmit mode and Q10 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator, to the varactor diodes (D2 and D4 in transmit mode and D9 and D11 in receive mode). The T/R pin is set high in receive mode causing Q7 and Q8 to turn Q2 off and Q10 on.

The T/R pin is set low in transmit mode. The outputs from Q10 and Q2 are amplified by Q3 and sent to the buffer amplifiers.

The outputs from Q3 to Q4 is divided into 1/2 in passing through a Divider IC (IC301), and goes to the RF amplifiers.

**Fig. 5 PLL circuit**

## CIRCUIT DESCRIPTION

### 3) UNLOCK DETECTOR

If a pulse signal appears at the LD pin of IC2, an unlock condition occurs, and the DC voltage obtained from D1, R1, and C6 causes the voltage applied to the microprocessor to go low. When the microprocessor detects this condition, the transmitter is disabled, ignoring the push-to-talk switch input signal.(See Fig. 6)

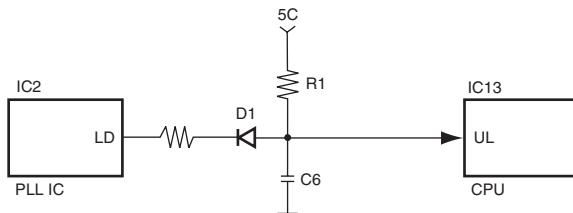

Fig. 6 Unlock detector circuit

## 4. Transmitter System

### 1) Microphone amplifier

The signal from the microphone passes through the limiter circuit in D23, and through the high-pass filter, the ALC circuit, the low-pass filter, the high-pass filter, and pre-emphasis/IDC circuit IC14. When encoding DTMF, the mute switch (Q35) is turned OFF for muting the microphone input signal.

The signal passes through the D/A converter (IC17) for the maximum deviation adjustment, and goes to the VCXO modulation input.

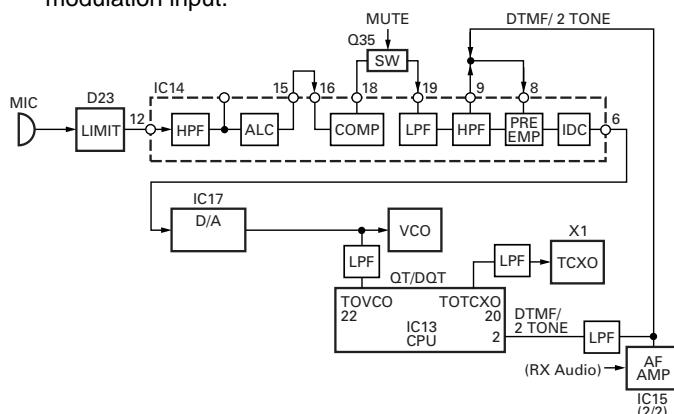

Fig. 7 Microphone amplifier

### 2) Drive and Final amplifier

The signal from the T/R switch (D5 is on) is amplified by the drive amplifier (Q6) to 50mW.

The output of the drive amplifier is amplified by the RF power amplifier (IC1) to 5.0W (1W when the power is low). The RF power amplifier consists of two MOS FET stages. The output of the RF power amplifier is then passed through the harmonic filter (LPF) and antenna switch (D3 is on) and applied to the antenna terminal.

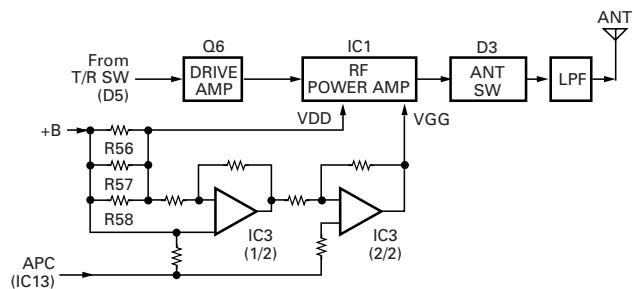

Fig. 8 Drive and final amplifier and APC circuit

### 3) APC circuit

The APC circuit always monitors the current flowing through the RF power amplifier (IC1) and keeps a constant current. The voltage drop at R56, R57 and R58 is caused by the current flowing through the RF power amplifier and this voltage is applied to the differential amplifier IC3(1/2). IC3(2/2) compares the output voltage of IC3(1/2) with the reference voltage from IC13, and the output of IC3(2/2) controls the VGG of the RF power amplifier to make both voltages the same.

The change of power high/low is carried out by the change of the reference voltage.

### 4) Encode signaling

#### (1) QT/DQT

QT,DQT data of the TOTCXO Line is output from pin 20 of the CPU. The signal passes through a low-pass CR filter and goes to the TCXO(X1).

The QT,DQT data of the TOVCO Line is output from pin 22 of the CPU. The signal passes through a low pass CR filter, mixes with the audio signal, and goes to the VCO modulation input. TX deviation is adjusted by the CPU. (See fig.7)

#### (2) DTMF/2 TONE

High-speed data is output from pin 2 of the CPU. The signal passes through a low-pass CR filter, and provides a TX and SP out tone, and is then applied to the audio processor (IC14). The signal is mixed with the audio signal and goes to the VCO.

TX deviation is adjusted by the CPU. (See fig.7)

## 5. Power supply

There are five 5V power supplies for the microprocessor: 5V, 5M, 5C, 5R, and 5T. 5V is always output while the power is on. 5M is always output, but turns off when the power is turned off to prevent malfunction of the microprocessor.

5C is a common 5V and is output when SAVE is not set to OFF.

5R is 5V for reception and output during reception.

5T is 5V for transmission and output during transmission.

# CIRCUIT DESCRIPTION

## 6. Control Circuit

The control circuit consists of a microprocessor (IC13) and its peripheral circuits. It controls the TX-RX unit and transfers data to and from the display unit. IC13 mainly performs the following:

- (1) Switching between transmission and reception by the PTT signal input.
- (2) Reading system, group, frequency, and program data from the memory circuit.
- (3) Sending frequency program data to the PLL.
- (4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- (5) Controlling the audio mute circuit by the decode data input.
- (6) Transmitting tone and encode data.

### 1) Frequency shift circuit

The microprocessor (IC13) operates at a clock of 9.8304MHz. This oscillator has a circuit that shifts the frequency by BEAT SHIFT SW (Q31).

### 2) Memory circuit

Memory circuit consists of the CPU (IC13) and a flash memory (IC12). A flash memory has a capacity of 2M bits that contains the transceiver control program for the CPU and data such as transceiver channels and operating features.

This program can be easily written from an external device. Data, such as DTMF memories and the operating status, are programmed into the EEPROM (IC10).

#### • Flash Memory

**Note :** The flash memory holds data such as written with the FPU (KPG-56D), and firmware program (User mode, Test mode, Tuning mode, etc.). This data must be rewritten when replacing the flash memory.

#### • EEPROM

**Note :** The EEPROM stores tuning data (Deviation, Squelch, etc.).

Realign the transceiver after replacing the EEPROM.

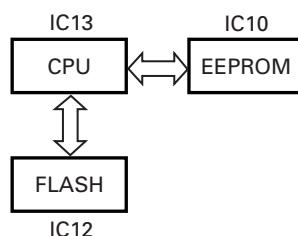

Fig. 9 Memory circuit

### 3) Low battery warning

The battery voltage is monitored by the microprocessor (IC13). When the battery voltage falls below the voltage set by the Low Battery Warning adjustment, the LED flashes red to notify the operator that it is time to replace the battery. If the battery voltage falls even more (approx. 5.8V), a beep sounds and transmission is stopped.

Low battery warning	Battery condition
The red LED flashes during transmission.	The battery voltage is low but the transceiver is still usable.
The red LED flashes and a continuous beep sounds while PTT is pressed.	The battery voltage is low and the transceiver is not able to make calls.

## 7. Optional Board Terminal

Terminals for mounting the option board are provided at the bottom edge of the TX-RX unit. The table below shows the correspondence between the board and terminals.

### Optional Board Terminal Function (CN5)

Pin	Name	I/O	Function
1	GND	-	GND
2	SB	O	Power output after power switch

6	BYTE	I	+5V(5M)
7	CNVSS	I	GND
8	AFSTB	O	Base Band IC strobe/rest output
9	AFFCLK	O	Base Band IC frame rest/system reset output
10	RESET	I	Reset
11	XOUT	O	Clock output
12	VSS	-	GND
13	XIN	I	Clock input
14	VCC	-	+5V
15	NC	I	NC
16	EN2	I	Encoder pulse input 2
17	AUX3	I/O	Option board port 3    *Smar Trunk: Clock output    *E Trunk: Step pulse input
18	INT	I	Battery voltage monitor input Low battery:L
19	OE	I	Not used
20	TOTCXO	I	QT/DQT modulation output(TCXO)
21	EEPDAT	I/O	EEPROM data input/output
22	TOVCO	O	QT/DQT modulation output(VCO)
23	AUX1	I	Option board port 1    *Smar Trunk: Req/Ack input    *E Trunk: TX Request input
24	SFTSTB	O	Shift register strobe output
25	EN1	O	Encoder pulse input 1
26	DACS	I	Chip select output(Max dev)    Select:L
27	EN3	I	CH selector input (TK-260G)
28	NC	O	NC
29	AUX4	O	Option board port 4    *Smar Trunk: Data output
30	AUX2	I/O	Option board port 2    *Smar Trunk: Data input    *E Trunk: Synchronizing input
31	KOUT3	O	Key scan output 3
32	KOUT2	O	Key scan output 2
33	TXD	O	Serial data
34	PTT/RXD	I	PTT on: L/Serial data
35	KOUT1	O	Key scan output 1
36	KOUT0	O	Key scan output 0
37	RDY	-	Not used
38	ALE	O	Not used
39	HOLD	I	Not used
40	HLDA	O	Not used
41	BLCK	O	Not used
42	RDY	O	READ signal
43	BHE	O	Not used
44	WR	O	WRITE signal
45	LDCDS	O	LCD chip enable output
46	CNTDAT	O	Common data output (EEPROM,LCD,SHIFT REG,1bit D/A MODEM)
47	CNTCLK	O	Common clock output (EEPROM,LCD,SHIFT REG,1bit D/A MODEM)

Pin No.	Port Name	I/O	Function
48	CSO	-	Chip select signal
49	A19	-	Not used
50-59	A18-A9	-	Flash memory address bus
60	ACC	-	+5V
61	A8	-	Flash memory address bus
62	VSS	-	GND
63-70	A7-A0	-	Flash memory address bus
71-75	KIN0-KIN4	I	Key scan input
76	PLLUL	O	PLL unlock detect input    unlock: L
77	PLLSTB	O	PLL strobe output    Latch: L
78	SAVE	I	Battery save output
79-86	D7-D0	-	Flash memory data bus
87	KEYAD	I	MONI LAMP key input
88	BATT	I	Battery voltage input
89	RFDAT	O	PLL data output
90	RFCLK	O	PLL clock output
91	NC	-	NC
92	RSSQL	I	Receive signal strength indicator input
93	ANLSQL	I	Analog squelch level input
94	AVSS	-	GND
95	TOI	I	QT/DQT signal input
96	VREF	-	Reference voltage input
97	AVCC	-	GND
98	DTMPD	O	DTME IC power control    Power down: H
99	DTMCLK	O	DTME IC decode clock output
100	DTMDAT	I	DTME IC decode data input

## Shift register 1:BU4094BCFV(IC5)

■ Pin function

Pin No.	Port	I/O	Function
4	W/N	O	Wide/Narrow SW (K, M)    Narrow: L
5	MUTE	O	RX audio/MIC mute    Mute: L
6	NC	O	NC
7	LED0	O	RED LED    LED lights: H
11	BSHIFT	O	Beat Shift    Shift on: H
12	REG2	O	Base Band IC inter register select 2
13	REG1	O	Base Band IC inter register select 1
14	LED1	O	GREEN LED    LED lights: H

## Shift register 2:BU4094BCFV(IC6)

■ Pin function

Pin No.	Port	I/O	Function
4	5MC	O	5MC control    Power on: L
5	5RC	O	5R control    Power on: L
6	5TC	O	5T control    Power on: H
7	SPMUTE	O	AF amp power supply control Power on: H
11	AUX6	O	Option board port 6
12	AUX5	O	Option board port 5
13	LCDBLK	O	LCD back light    Back light on: L
14	RX	O	RX/TX VCO SW    RX: L

## DESCRIPTION OF COMPONENTS

## DISPLAY UNIT (X54-3250-10)

Ref. No.	Use/Function	Operation/Condition	
IC501	IC	LCD driver	
Q501	Transistor	Current driver	/ LCD back light LED AVR
Q502	Transistor	DC switch	
D505	Diode	Speed up	
D506	LED	LCD back light	
D507	Diode	Voltage reference	
D508~510	LED	LED	/ Key pad back light
D511	LED	LCD back light	
D512~516	LED	LED	/ Key pad back light

## TX-RX UNIT (X57-587X-XX)

Ref. No.	Use/Function	Operation/Condition	
IC1	IC	RF Power Module	
IC2	IC	PLL system	
IC3	IC	Comparator (APC)	
IC4	IC	FM IF system	
IC5,6	IC	Shift register	/ Output expander
IC7	IC	Voltage regulator	/ 5V
IC8	IC	Voltage detector	/ Reset
IC9	IC	Voltage detector	/ INT
IC10	IC	EEPROM	
IC11	IC	AF Power amplifier	
IC12	IC	Flash memory	
IC13	IC	Microprocessor	
IC14	IC	Audio processor	
IC15(1/2)	IC	2Tone amplifier	
IC15(2/2)	IC	AF Pre amplifier	
IC16(1/2)	IC	Bias buffer	
IC16(2/2)	IC	AF Buffer amplifier	
IC17	IC	D/A converter (TX AF adjustment)	
IC18	IC	DTMF decoder	
IC19	IC	Active filter	/ For LSD in
IC301	IC	VCO 1/2 divider	
Q1	Transistor	PLL IC fin amplifier	
Q2	Transistor	VCO oscillation (TX)	
Q3	Transistor	RF Buffer amplifier	
Q4	Transistor	RF amplifier	
Q6	Transistor	RF amplifier	/ TX driver
Q7	FET	DC switch	
Q8,Q9	Transistor	DC switch	
Q10	FET	VCO oscillation (RX)	
Q11	Transistor	Ripple filter	
Q12	Transistor	Tripler	
Q13	Transistor	DC switch	
Q14	Transistor	2 <sup>nd</sup> IF W/N switch sets to on when Narrow	
Q15	Transistor	DC switch	
Q16	Transistor	DC switch	/ 5R
Q17	Transistor	2 <sup>nd</sup> IF W/N switch sets to on when Wide	
Q18	Transistor	DC switch	/ 5T, Save
Q19	FET	Mixer	
Q20,Q21	Transistor	DC switch	/ 5T, Save
Q22	Transistor	IF amplifier	

Ref. No.	Use/Function	Operation/Condition	
Q23	Transistor	DC switch	/ W/N audio amplitude adjust
Q24	Transistor	DC switch	/ LED (Red)
Q25	Transistor	DC Switch	/ LED (Green)
Q26	Transistor	DC switch	/ Squelch
Q27	FET	DC switch	/ 5T, Save
Q28	Transistor	DC switch	/ 5M
Q30	FET	SP Mute switch	
Q31	Transistor	Clock frequency shift	
Q32~34	Transistor	DC switch	/ SP Mute
Q35(1/2)	FET	Mute switch	/ MIC line mute
Q35(2/2)	FET	DC switch	
Q36	FET	Mute switch	
Q301	FET	RF amplifier	
D1	Diode	Unlock detect	
D2	Variable capacitance diode	Frequency control	
D3	Diode	ANT switch	
D4	Variable capacitance diode	Frequency control	
D5	Diode	TX/RX switch	
D6	Variable capacitance diode	TX modulation	
D7	Diode	ANT switch	
D8	Zener Diode	Overload protection	
D9	Variable capacitance diode	Frequency control	
D10	Diode	ANT switch	
D11	Variable capacitance diode	Frequency control	
D12	Diode	Current steering	
D13,14	Diode	RF switch (2 <sup>nd</sup> IF wide/narrow)	
D15	Diode	Reverse protection	
D17	Diode	Model check	
D18	LED	LED/ Red, Green	
D19	Diode	Model check	
D21	Diode	Voltage drop	
D22	Diode	Reverse protection	
D23	Diode	Voltage clamp	
D302,303,305	Variable capacitance diode	Rf BPF turnig	

## PARTS LIST

\* New Parts.  $\triangle$  indicates safety critical components.Parts without **Parts No.** are not supplied.Les articles non mentionnés dans le **Parts No.** ne sont pas fournis.Teile ohne **Parts No.** werden nicht geliefert.

## ADJUSTMENT

### Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	150 to 174MHz (K) 136 to 150MHz (K2). Frequency modulation and external modulation. -127dBm/0.1µV to greater than -47dBm/1mV
2. Power Meter	Input Impedance Operation Frequency Measurement Range	50Ω. 150 to 174MHz (K) 136 to 150MHz (K2). Vicinity of 10W
3. Deviation Meter	Frequency Range	150 to 174MHz (K) 136 to 150MHz (K2).
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	10mV to 10V DC High input impedance for minimum circuit loading.
5. Oscilloscope		DC through 30MHz.
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz. 0.2ppm or less.
7. Ammeter		5A.
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz. 1mV to 10V.
9. Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more. 0 to 1V.
10. Distortion Meter	Capability Input Level	3% or less at 1kHz. 50mV to 10Vrms.
11. Spectrum Analyzer	Measuring Range	DC to 1GHz or more
12. Tracking Generator	Center frequency Output Voltage	50kHz to 600MHz 100mV or more
13. 8Ω Dummy Load		Approx. 8Ω, 3W.
14. Regulated Power Supply		5V to 10V, approx. 3A Useful if ammeter equipped.

# ADJUSTMENT

## ■ The following parts are required for adjustment

### 1. Antenna connector adapter

The antenna connector of this radio uses an SMA terminal.

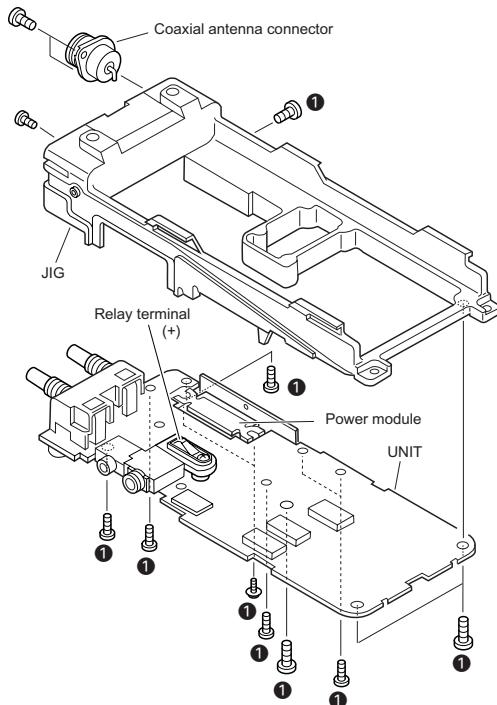

Use an antenna connector adapter [SMA(f) – BNC(f) or SMA(f) – N(f)] for adjustment. (The adapter is not provided as an option, so buy a commercially-available one.)

### Note

When the antenna connector adapter touches the knob, draw out the knob to mount the connector.

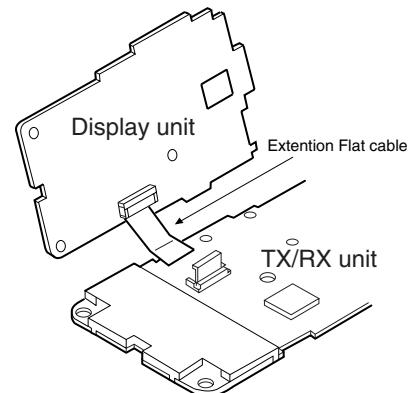

## Repair Jig (Chassis)

1. Jig (chassis) : Part No. A10-4009-13) for adjustment.
2. Use the jig as follows.
  - ① Place the TX-RX unit on the jig and fix it with thirteen screws ①.
  - ② Solder the antenna terminal of the TX-RX unit.
3. Supply power from an external power supply.  
Relay terminal : + (7.5)  
Jig (Chassis) : -

## Repair Jig (Extention Flat cable : part No. E37-0851-05)

This cable is used for connecting the TK-272G display unit and TX/RX unit when you test or repair the transceiver.

**Caution :** You must connect TK-272G display unit when you test or repair the transceiver.

## Test Mode

### ■ Test mode operating features

This transceiver has a test mode. To enter test mode, press the [ $\blacktriangleleft$ ] key and turn the power on. Hold the [ $\blacktriangleleft$ ] key until the test channel No. and test signalling No. appear on LCD. Test mode can be inhibited by programming. To exit test mode, switch the power on again. The following functions are available in test mode.

#### • Controls

[PTT]	Used when making a transmission.
[Side2]	Monitor ON and OFF.
[Side1]	Changes wide and narrow.
[O]	Sets to the Tuning mode.
[●]	Unused
[◀]	RF power HIGH and LOW.
[▶]	Changes signalling.
[ENCODER]	Changes channel.

#### • LCD indicator

- "LO"      Lights at RF Power Low.  
" "      Lights at monitor ON.

#### • LED indicator

- |           |  |
|-----------|--|
| Red LED   | Lights during transmission. Blinks during low battery voltage warning. |
| Green LED | Lights when there is a carrier.  |

## ADJUSTMENT

**■ Frequency and signalling**

The set has been adjusted for the frequencies shown in the following table. When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

**Frequency (MHz) K type**

Channel No.	RX Frequency	TX Frequency
1	162. 05000	162. 00000
2	150. 05000	150. 00000
3	173. 95000	174. 00000
4	162. 00000	162. 00000
5	162. 20000	162. 20000
6	162. 40000	162. 40000
7~16	—	—

**Frequency (MHz) K2 type**

Channel No.	RX Frequency	TX Frequency
1	143. 05000	143. 00000
2	136. 05000	136. 00000
3	149. 95000	150. 00000
4	143. 00000	143. 00000
5	143. 20000	143. 20000
6	143. 40000	143. 40000
7~16	—	—

**Signalling**

Signalling No.	RX	TX
1	None	None
2	None	100Hz square wave
3	QT 67.0Hz	QT 67.0Hz
4	QT 151.4Hz	QT 151.4Hz
5	QT 210.7Hz	QT 210.7Hz
6	QT 250.3Hz	QT 250.3Hz
7	DQT D023N	DQT D023N
8	DQT D754I	DQT D754I
9	DTMF DEC, (159D)	DTMF ENC, (159D)
10	None	DTMF tone 9
11	2 tone 321.7/928.1Hz	ENC
12	Single tone 1200Hz	Single tone 1200Hz

**• Preparations for tuning the transceiver**

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

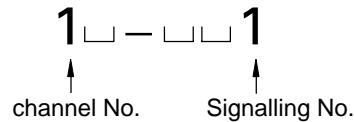

Whenever the transmitter is tuned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a 8Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

**• Transceiver tuning**

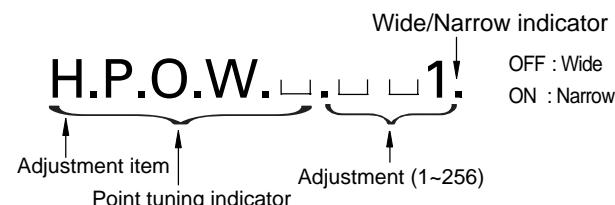

(To place the transceiver in tuning mode)

Channel appears on the LCD. Set the channel according to the tuning requirements.

**LCD display (Test mode)**

Press [O], to enter tuning mode. Use the [ $\blacktriangleleft$ ] key to write tuning data through the tuning modes, and the channel selector knob to adjust the tuning requirements (1 to 256 appears on LCD).

Use the [ $\triangleright$ ] key to select the adjustment item through the tuning modes. Use the [ $\bullet$ ] key to adjust 3 or 5 point tuning, and use the [Side1] key to switch between Wide/Narrow.

**LCD display (Tuning mode)****Panel Tuning Mode K type**

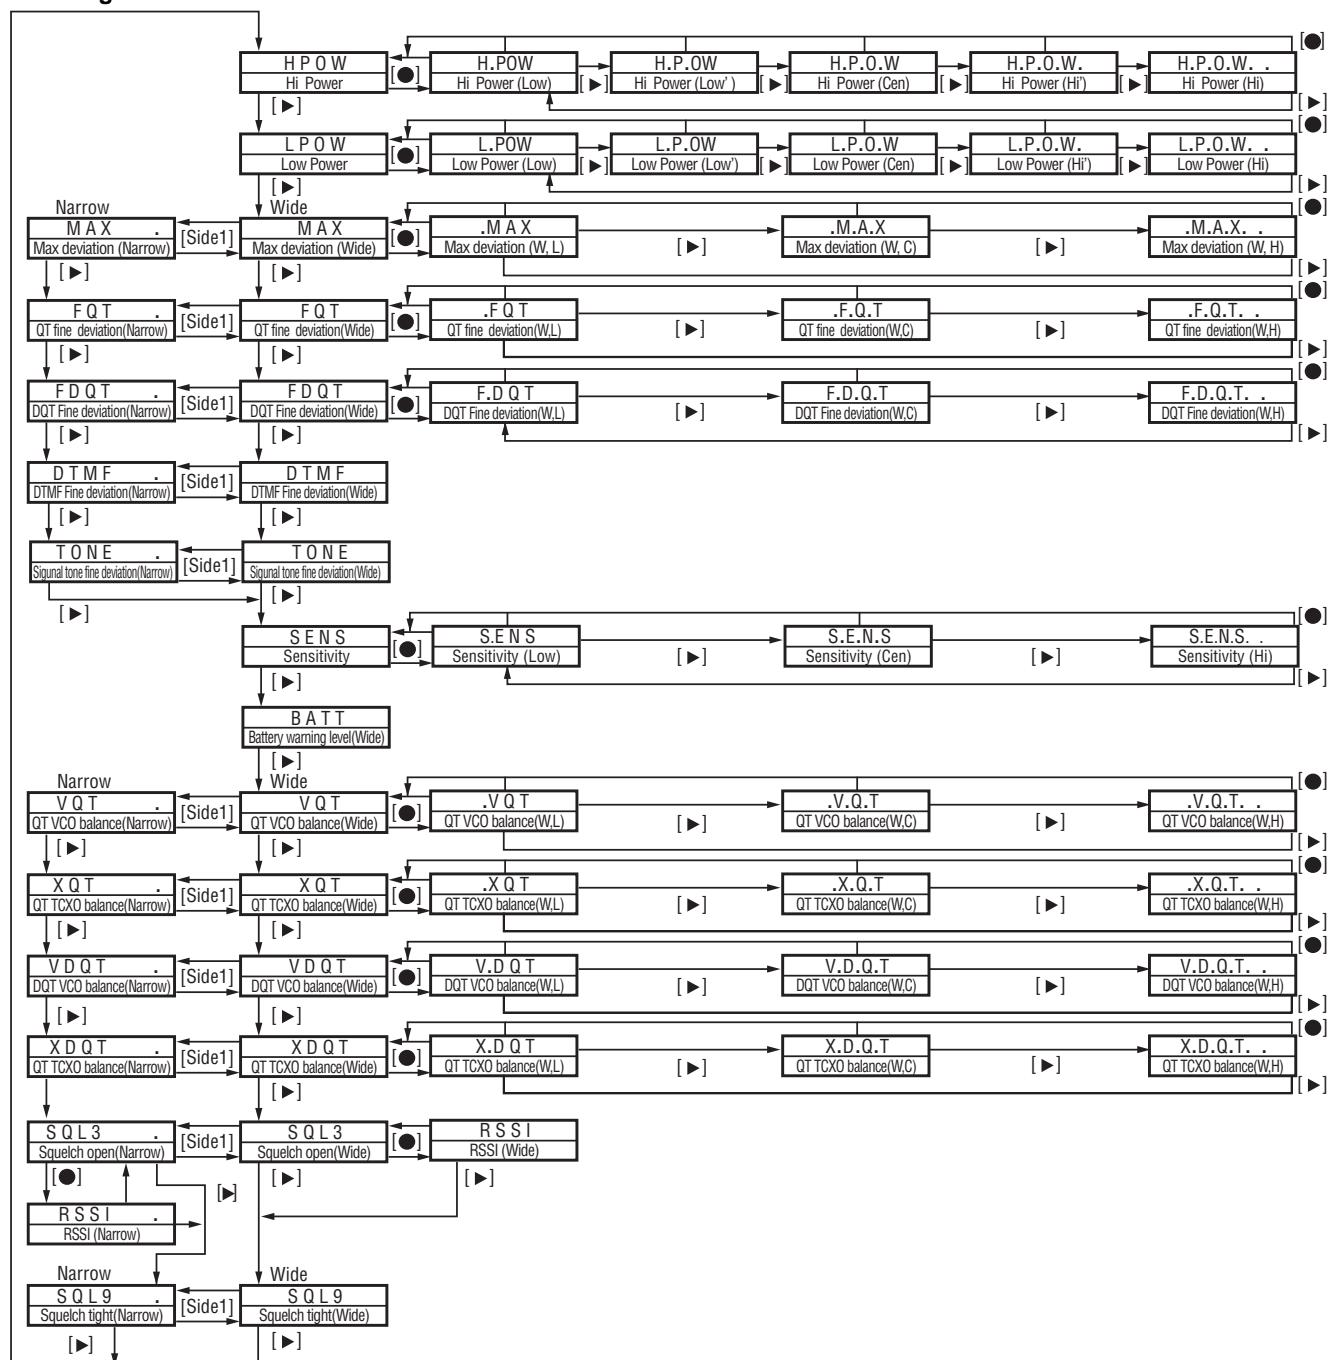

150-174(MHz)		
TEST Ch	RX frequency (MHz)	TX frequency (MHz)
Low	150.05000	150.00000
Low'	156.05000	156.00000
Center	162.05000	162.00000
High'	168.05000	168.00000
High	173.95000	174.00000

**Panel Tuning Mode K2 type**

136-150(MHz)		
TEST Ch	RX frequency (MHz)	TX frequency (MHz)
Low	136.05000	136.00000
Low'	139.55000	139.50000
Center	143.05000	143.00000
High'	146.55000	146.50000
High	149.95000	150.00000

## ADJUSTMENT

## ■ Tuning mode

## ADJUSTMENT

**Note**

Precision parts are used for the PTT, side1, and side2 switches.

In order to avoid damaging these switches, do not press them using your fingers. However, if it is necessary to press these switches, be sure to press them at 90° angles, pressing them at other angles can easily damage the parts.

**Common Section**

Item	Condition	Measurement		Adjustment		Specifications/ Remark
		Test equipment	Terminal	Parts	Method	
1. Setting	1) BATT terminal voltage:7.5V 2) SSG Standard modulation [Wide] MOD:1kHz, DEV:3kHz [Semi Wide] MOD:1kHz, DEV:24kHz [Narrow] MOD:1kHz, DEV:1.5kHz					
2. VCO lock voltage RX	[Panel Test Mode]	Power meter DVM	ANT CV(LV)		Check	
	1) CH-Sig:2-1					0.8V or more
	2) CH-Sig:3-1					4.0V ± 0.1V
	3) CH-Sig:2-1 PTT:ON					0.8V or more (K) 0.6V or more (K2)
TX	4) CH-Sig:3-1 PTT:ON					3.5V ± 0.1V (K,K2)

**Transmitter Section**

Item	Condition	Measurement		Adjustment		Specifications/ Remark
		Test equipment	Terminal	Parts	Method	
1. Frequency Adjust	1) PTT:ON	Freq. Counter Power meter Am meter	ANT	VR1	Center frequency (162.0 MHz) ± 100Hz (K) (143.0 MHz) ± 100Hz (K2)	
2. Max Power Check	1) Adj item [HPOW] Adjust [256]				Check	5.2W or more
	2) Adj item [H.P.O.W] → [H.P.O.W] → [H.P.O.W.] → [H.P.O.W..] Adjust [256] PTT:ON					
3. Hight Power Adjust	1) Adj item [HPOW] Adjust [***] 2) Adj item [H.P.O.W] → [H.P.O.W] → [H.P.O.W.] → [H.P.O.W..] Adjust [***] PTT:ON			Encoder knob	5.0W	±0.1W 2.2A or less
4. Hight Power Check	[Panel Test Mode]				Check	4.0~6.0W 2.3A or less
	1) CH-Sig:1-1 PTT:ON					
	2) CH-Sig:2-1 PTT:ON					
5. Low Power Adjust	3) CH-Sig:3-1 PTT:ON			Encoder knob	1.0W	±0.1W 1.0A or less
	1) Adj item [LPOW] Adjust [***] 2) Adj item [L.P.O.W] → [L.P.O.W] → [L.P.O.W.] → [L.P.O.W..] Adjust [***] PTT:ON					

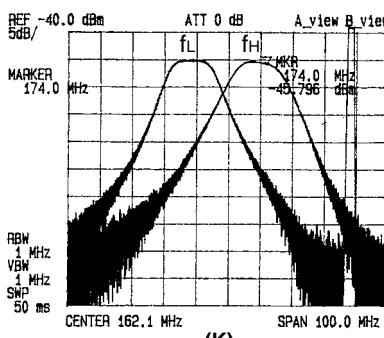

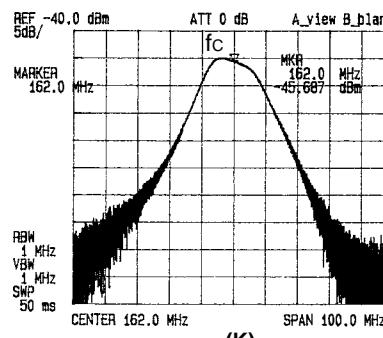

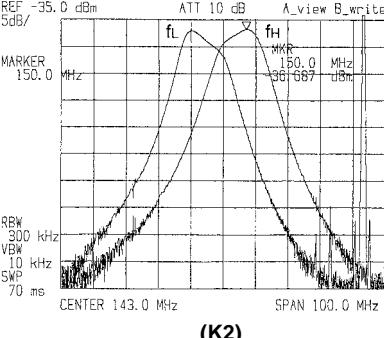

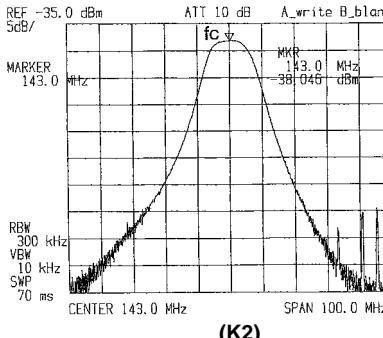

## ADJUSTMENT

Item	Condition	Measurement		Adjustment		Specifications/ Remark
		Test equipment	Terminal	Parts	Method	
6. Low Power Check	[Panel Test Mode] 1) CH-Sig:1-1 Set low power (Push [ $\blacktriangleleft$ ]) PTT:ON	Freq. Counter Power meter Am meter	ANT	VR1	Check	0.5~1.5W 1.2A or less
	2) CH-Sig:2-1 PTT:ON					
	3) CH-Sig:3-1 PTT:ON					
7. Max DEV Adjust [Wide]	1) Adj item [MAX] Adjust [***] AG:1kHz / 150mV Dev meter filter LPF:15kHz HPF:OFF	Power meter Dev meter Oscilloscope AG AF VTVM	ANT SP/MIC connector	Encoder knob	4.2kHz (According to the larger +,-)	$\pm 50\text{Hz}$
	2) Adj item [.M A X] $\rightarrow$ [.M.A.X] $\rightarrow$ [.M.A.X. .] Adjust [***] PTT:ON					
	[Narrow] 1) Adj item [MAX .] Adjust [***] PTT:ON					
8. MIC Sensitivity Check	[Panel Test Mode] 1) CH-Sig:1-1 AG:1kHz / 15mV LPF:3kHz PTT:ON				Check	2.2~3.0kHz
9. QT TCXO Balance	Adj item [X Q T] Adjust [200] Wide, Narrow	ANT SP/MIC connector	Encoder knob			
10.DQT TCXO Balance	Adj item [X D Q T] Adjust [150] Wide, Narrow					
11.DQT VCO Balance Adjust [Wide]	1) Adj item [VDQT] Adjust [***] LPF:3kHz HPF:OFF				Make the demodulation waves into square waves.	
	2) Adj item [V.D Q T] $\rightarrow$ [V.D.Q.T] $\rightarrow$ [V.D.Q.T. .] Adjust [***] PTT:ON					
	[Narrow] 3) Adj item [VDQT .] Adjust [***] PTT:ON					
12.QT VCO Balance	Adj item [V Q T] Adjust [***] $[\text{VDQT}] \times \frac{200}{150} = [\text{VQT}]$					

## ADJUSTMENT

Item	Condition	Measurement		Adjustment		Specifications/ Remark
		Test equipment	Terminal	Parts	Method	
13.QT Deviation Adjust	[Wide]	1) Adj item [FQT] Adjust [***] LPF:3kHz HPF:OFF 2) Adj item [ .F Q T] → [ .F.Q. T] → [ .F.Q.T. .] Adjust [***] PTT:ON	Power meter Dev meter Oscilloscope AG AF VTVM	Encoder knob	Wide:0.90kHz Narrow:0.42kHz	±40Hz ±40Hz
	[Narrow]	3) Adj item [FQT.] Adjust [***] PTT:ON				
	[Wide]	1) Adj item [FDQT] Adjust [***] LPF:3kHz HPF:OFF 2) Adj item [F.D Q T] → [F.D.Q.T] → [F.D.Q.T. .] Adjust [***] PTT:ON				
	[Narrow]	3) Adj item [FDQT.] Adjust [***] PTT:ON				
14.DQT Devition Adjust	[Wide]	1) Adj item [DTMF] Adjust [***] LPF:15kHz HPF:OFF PTT:ON			Wide:0.75kHz Narrow:0.35kHz	±50Hz
	[Narrow]	2) Adj item [DTMF .] Adjust [***] PTT:ON				
	[Wide]	1) Adj item [DTMF] Adjust [***] LPF:15kHz HPF:OFF PTT:ON				
	[Narrow]	2) Adj item [DTMF .] Adjust [***] PTT:ON				
16.TONE Deviation Adjust	[Wide]	1) Adj item [TONE] Adjust [***] LPF:15kHz HPF:OFF PTT:ON			Wide:3.0kHz Narrow:1.5kHz	±0.1kHz
	[Narrow]	2) Adj item [TONE .] Adjust [***] PTT:ON				
	[Wide]	1) Adj item [TONE] Adjust [***] LPF:15kHz HPF:OFF PTT:ON				
	[Narrow]	2) Adj item [TONE .] Adjust [***] PTT:ON				
17.BATT Detection Writing	1) Adj item [BATT] Adjust [***] PTT:ON	Power meter DVM	ANT BATT terminal	Encoder knob	After pressing the PTT switch, confirm that one predetermined numeric in the range of 1 to 256 appears, then press the [ $\blacktriangleleft$ ] key. That number will be stored in memory.	BATT terminal voltage:5.9V
18.BATT Detection Check	<b>[Panel Test Mode]</b> 1) CH-Sig:1-1 BATT terminal voltage:6.5V PTT:ON				Check	No blinking of LED
	2) BATT terminal voltage:5.7V PTT:ON	Blinking of LED				

## ADJUSTMENT

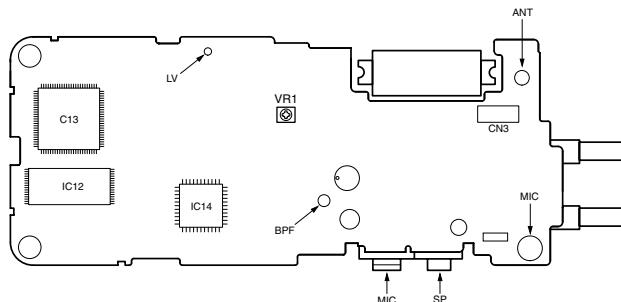

Item	Condition	Measurement		Adjustment		Specifications/ Remark
		Test equipment	Terminal	Parts	Method	
1. Sensitivity	Adj item [SENS]	DVM		Encoder knob	f <sub>L</sub> : ([S.E.N.S]) : [88] (K) [60] (K2)	
Adjustment	Adjust [***]  f <sub>L</sub> f <sub>c</sub> f <sub>H</sub> [S.E.N.S] → [S.E.N.S] → [S.E.N.S..]				fc : (S.E.N.S) : [134] (K) [100] (K2)	
					f <sub>H</sub> : (S.E.N.S..) : [180] (K) [130] (K2)	
2. BPF	(PANEL TEST MODE) CH-Sig 2-1 Tra-G setting -40dBm	Tracking generator spectrum analyzer	ANT	L305, L306, L307	Adjust wave form to figure 1.(f <sub>L</sub> )	
	CH-Sig 1-1		BPF		Check wave form to figure 2.(fc)	
	CH-Sig 3-1				Check wave form to figure 1.(f <sub>H</sub> )

## SPECIFICATIONS

### General

Frequency Range .....	150~174MHz (K) 136~150MHz (K2)
Number of channels .....	Max. 32
Channel Spacing .....	25kHz, 30kHz (Wide) 12.5kHz, 15kHz (Narrow)
PLL channel stepping .....	2.5kHz, 5kHz, 6.25kHz, 7.5kHz
Operating Voltage .....	7.5 VDC±20%
Battery Life .....	More than 4 hours at 5 watts (5-5-90 duty cycle with KNB-14 battery) More than 8 hours at 5 watts (5-5-90 duty cycle with KNB-15A battery)
Operating Temperature range .....	-30°C to +60°C (-22 °F to +140 °F)
Dimensions and Weight	
With KNB-14 (7.2V 600mAh battery) .....	58 (2-5/16) W x 135 (5-5/16) H x 32 (1-1/4) D mm (in) 400g (0.88lbs)
With KNB-15A (7.2V 1100mAh battery) .....	58 (2-5/16) W x 135 (5-5/16) H x 35 (1-3/8) D mm (in) 440g (0.97lbs)

### Receiver (Measurements made per EIA standard EIA-RS316B)

Sensitivity	
EIA 12dB SINAD .....	0.25µV (Wide)/0.28µV (Narrow)
Selectivity .....	70dB (Wide)/65dB (Narrow)
Inter modulation .....	65dB (Wide)/60dB (Narrow)
Spurious response .....	65dB
Audio Power Output .....	500mW
Frequency Stability .....	±3.0ppm
Channel Frequency Spread .....	24MHz (K), 14MHz (K2)

### Transmitter (Measurements made per EIA standard EIA-RS 316B)

RF Power Output .....	5W/1W
Spurious and Harmonics .....	70dB
Modulation .....	16KΦF3E (Wide)/11KΦF3E (Narrow)
FM Noise .....	45dB (Wide)/43dB (Narrow)
Audio Distortion .....	Less than 5%
Frequency Stability .....	±3.0ppm
Channel Frequency Spread .....	24MHz (K), 14MHz (K2)
