GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

PERSONAL SAFETY

The following precautions are recommended for personal safety:

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by only qualified technicians.

PRE-INSTALLATION CONSIDERATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. PRE-INSTALLATION CHECKOUT

2-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

2-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signalling equipment operation should be verified.

3. PLANNING THE INSTALLATION

3-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

3-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

GENERAL

3-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

3-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

4. INSTALLATION PLANNING – CONTROL STATIONS

4-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

4-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

SERVICE

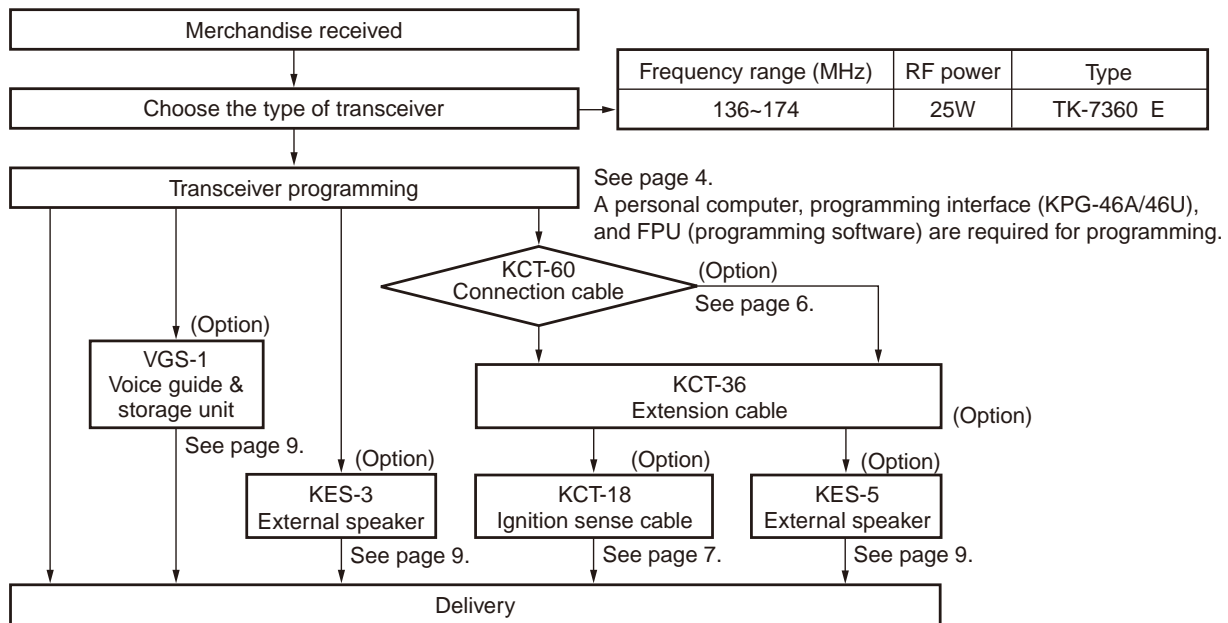

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

NOTE

If you do not intend to use the speaker 3.5-mm jack and the D-sub 15-pin connector, fit the supplied speaker-jack cap and ACC cap to stop dust and sand from getting in.

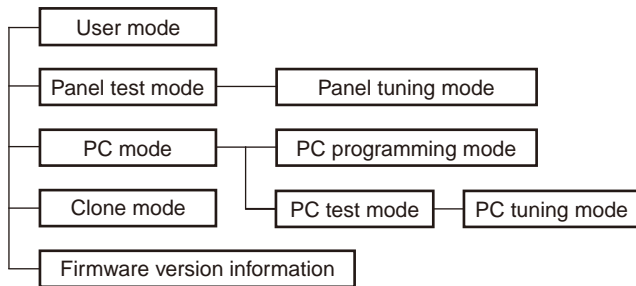

SYSTEM SET-UP

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Use by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the transceiver.
PC mode	Used for communication between the transceiver and PC.
PC programming mode	Used to read and write frequency data and other features to and from the transceiver.
PC test mode	Used to check the transceiver using the PC. This feature is included in the FPU.
PC tuning mode	Used to tune the transceiver using the PC.
Clone mode	Used to transfer programming data from one transceiver to another.
Firmware version information	Used to confirm the internal firmware version.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[A]+Power ON
Panel tuning mode	Panel test mode+[s]
PC mode	Received commands from PC
Clone mode	[<B]+Power ON (One second)
Firmware version information	[Δ]+Power ON

3. Panel Test Mode

Setting method refer to ADJUSTMENT.

4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

5. PC Mode

5-1. Preface

The transceiver is programmed using a personal computer, a programming interface (KPG-46A/46U, USB adapter (KCT-53U)) and programming software (KPG-135D : ver.2.00 or later).

The programming software can be used with a PC. Figure 1 shows the setup of a PC for programming.

REALIGNMENT

5-2. Connection procedure

1. Connect the transceiver to the computer using the interface cable and USB adapter (When the interface cable is KPG-46A, the KCT-53U can be used.).

Note:

- You must install the KPG-46U driver in the computer to use the USB programming interface cable (KPG-46U).
- You must install the KCT-53U driver in the computer to use the USB adapter (KCT-53U).
- When using the USB adapter (KCT-53U) for the first time, plug the KCT-53U into a USB port on the computer with the computer power ON.

2. When the Power is switched on, user mode can be entered immediately. When the PC sends a command, the transceiver enters PC mode, and "PROGRAM" is displayed on the LCD.

When data is transmitting from the transceiver, the red LED blinks.

When data is receiving by the transceiver, the green LED blinks.

Note:

The data stored in the computer must match the "Model Name" when it is written into the EEPROM.

5-3. KPG-46A description

(PC programming interface cable: Option)

The KPG-46A is required to interface the transceiver to the computer. It has a circuit in its D-sub connector (KPG-46A: 9-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46A connects the 8-pin microphone connector of the transceiver to the RS-232C serial port of the computer.

5-4. KPG-46U description

(USB programming interface cable: Option)

The KPG-46U is a cable which connects to a USB port on a computer.

When using the KPG-46U, install the supplied CD-ROM (with driver software) in the computer. The KPG-46U driver runs under Windows XP, Vista or 7.

5-5. KCT-53U description (USB adapter: Option)

The KCT-53U is a cable which connects the KPG-46A to a USB port on a computer.

When using the KCT-53U, install the supplied CD-ROM (with driver software) in the computer. The KCT-53U driver runs under Windows 2000, XP or Vista (32-bit).

5-6. Programming Software KPG-135D description

The KPG-135D is the programming software for the transceiver supplied on a CD-ROM. This software runs under Windows XP, Vista or 7 on a PC.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

Fig. 1

6. Clone Mode

Programming data can be transferred from one transceiver to another by connecting them via their modular microphone jacks. The operation is as follows (the transmit transceiver is the source and the receive transceiver is a target).

Note :

Clone mode should be enabled.

1. Turn the source transceiver power ON with the [**B**] key held down (1 second), "CLONE MODE" is displayed on the LCD.
2. Power on the target transceiver.
3. Connect the cloning cable (No. E30-3382-05) to the modular microphone jacks on the source and target.
4. Press the [**s**] key on the source transceiver.
The data of the source is sent to the target. While the source is sending data, red LED blinks. While the target is receiving the data, "PROGRAM" is displayed and green LED blinks. When cloning of data is completed, the source displays "END", and the source red LED turned off, and the target automatically operates in the User mode. The target can then be operated by the same program as the source.
5. The other target can be continuously cloned. Carry out the operation in step 2 to 4.

REALIGNMENT

6-1. Adding the data password

If the read authorization password is set in the optional feature menu, you must enter the password (Source transceiver) to activate a clone mode.

You can use 0-9 to configure the password. The maximum length of the password is 6 digits.

1. [**B**]+Power ON.
2. "CLONE LOCK" is displayed on the LCD.
3. If the [**↵**] and [**⏏**] keys is pressed while "CLONE LOCK" is displayed, numbers (0 to 9) are displayed flashing. When you press the [**C>**] key, the currently selected number is determined. If you press the [**S**] key after entering the password in this procedure, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.

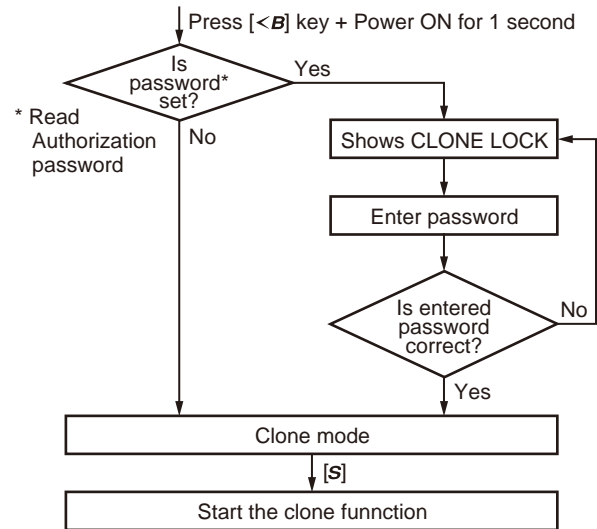

Fig. 2

6-2. Flow chart (Source transceiver)

7. Firmware Version Information

Press and hold the [**Δ**] key while turning the transceiver power ON and then keep pressing and holding the [**Δ**] key, the firmware version information appears on the LCD.

INSTALLATION

1. Connection Cable (KCT-60: Option)

The KCT-60 connection cable kit is used to connect the transceiver to a Horn alert cable, KCT-18 (Ignition sense cable), KES-5 (External speaker), or through the KCT-36 extension cable.

1-1. Installing the KCT-60 (Connection cable) in the transceiver

1. Remove the ACC. cap on the rear of the transceiver.
2. Connect the D-sub connector of the KCT-60 to the D-sub 15-pin terminal of the transceiver.
3. Connect the 15-pin connector of the KCT-60 to a Horn alert cable, KCT-18, KES-5, or through a KCT-36 extension cable.

Note: You must setup using the KPG-135D

INSTALLATION

1-2. Terminal function

D-sub 15-pin Pin No.	Function	Molex 15-pin Pin No.
1	SB	1
2	IGN	2
3	PA or EXT-SP	12
4	DO	4
5	DI	5
6	FNC1	9
7	FNC2	11
8	FNC3	7
9	FNC4	6
10	FNC5	8
11	FNC6	10
12	5C	-
13	HR1	13
14	HR2	14
15	GND	3

2. Horn Alert Function

The Horn alert function (max. 2A drive) is enabled by installing the KCT-60 in the transceiver.

2-1. Installation Procedure

1. Remove the chip resistor R863 (4.7kΩ) on the TX-RX unit before installing the KCT-60 in the transceiver.

Combination of Horn alert function and Ignition function

R863	KCT-18	Horn alert function	Ignition function	
Present	Absent	Always inactive	Inactive	Default
Absent	Present	Active when ignition is off	Active	
Absent	Absent	Always active	Transceiver cannot be turned on if the ignition function is set	
Present	Present	Do not use this configuration	Do not use this configuration	

2. Remove the ACC. cap on the rear of the transceiver.
3. Connect the D-sub connector of the KCT-60 to the D-sub 15-pin terminal of the transceiver.
4. Insert the two crimp terminals of the Horn alert cable to pins 13 and 14 of the square plug.
5. Connect the square plug to the 15-pin connector of the KCT-60.
6. Connect the remaining two Horn alert cables to your car Horn alert signal control.

The internal FET switch can be controlled by turning the HA function on/off and by using a signaling decode output. The maximum current of HA is 2A. This FET switch is the open drain circuit. Therefore, a DC power supply is necessary to use the HR1. The voltage range is from 5V to 16V.

Note: You must set up using the KPG-135D.

3. Ignition Sense Cable (KCT-18: Option)

The KCT-18 is an optional cable for enabling the ignition function. The ignition function lets you turn the transceiver power on and off with the car ignition key.

3-1. Installing the KCT-18 (Ignition sense cable) in the transceiver

1. The KCT-18 can be installed in the transceiver by the following two methods (Method A, Method B).
 Method A: The KCT-18 is soldered to the "IGN" pad on the TX-RX unit.
 Method B: The KCT-18 is connected to the 15-pin connector of the KCT-60 connected to the transceiver.

INSTALLATION

■ Installation Procedure: Method A

1. Remove the two screws on both the right and left sides of the transceiver, then remove the cabinet and top packing from the transceiver.
2. Remove the chip resistor R863 (4.7kΩ) on the TX-RX unit.

3. Cut the crimp terminal side of the KCT-18 using a pair of nippers or similar tool.

4. Solder the cable side cut in the above step 3 to the "IGN" pad on the TX-RX unit.

5. Dress the KCT-18 cable as shown in the figure. The KCT-18 cable needs to pass through one of two indentations located on the rear panel of the transceiver.

6. Cut off the projection of the top packing using a pair of nippers or similar tool.

If the KCT-18 cable is dressed to be routed through the indentations on the right side in step 5, the right side of the projection needs to be cut off. If the KCT-18 cable is dressed to be routed through the indentations on the left side, the left side of the projection needs to be cut off. Following is a figure presenting an example for when the right side of the projection is cut off.

7. Reinstall the top packing. Check the correct fitting of the top packing, then reinstall the cabinet and two screws for the right and left sides.
8. Connect the other side of the KCT-18 to the ignition line of the car.

■ Installation Procedure: Method B

1. Remove the two screws on both the right and left sides of the transceiver, then remove the cabinet and top packing from the transceiver.
2. Remove the chip resistor R863 (4.7kΩ) on the TX-RX unit.

3. Remove the ACC. cap on the rear of the transceiver.
4. Connect the D-sub connector of the KCT-60 to the D-sub 15-pin terminal of the transceiver.
5. Insert the crimp terminal side of the KCT-18 to pin 2 of the square plug.
6. Connect the square plug to the 15-pin connector of the KCT-60.
7. Connect the other side of the KCT-18 to the ignition line of the car.

Note: You must set up using the KPG-135D.

INSTALLATION

4. External Speaker (Option)

4-1. KES-3

The KES-3 is an external speaker for the 3.5-mm-diameter speaker jack.

■ Connection procedure

1. Remove the speaker-jack cap on the rear of the transceiver.
2. Connect the KES-3 to the 3.5-mm-diameter speaker jack on the rear of the transceiver.

4-2. KES-5

External speaker KES-5 can be installed for KCT-60.

■ Connection procedure

1. Remove the ACC. cap on the rear of the transceiver.
2. Connect the D-sub connector of the KCT-60 to the D-sub 15-pin terminal of the transceiver.
3. Insert the two crimp terminals of the KES-5 to pins 3 and 12 of the square plug.
4. Connect the square plug to the 15-pin connector of the KCT-60.

Note:

You must set up using the KPG-135D. Before the external speaker can be used, you must assign one of the keys as "External Speaker", using the KPG-135D.

5. Voice Guide & Storage Unit (VGS-1: Option)

5-1. Installing the VGS-1 unit in the transceiver

1. Remove the two screws on both sides of the transceiver, then remove the cabinet and top packing from the transceiver.
2. Remove the cover fitted into the TX-RX unit connector (CN700).
3. Attach two cushions to VGS-1
4. Insert the VGS-1 connector (CN1) into the TX-RX unit connector (CN700).

Note: You must set up using the KPG-135D.

INSTALLATION

6. GPS Receiver Connection

6-1. Installing the GPS receiver

1. Solder each cable of the connector cables to the TX-RX unit.

- Red cable

The red cable needs to be connected to the solder pad (5M) on the TX-RX unit.

- Yellow cable

The yellow cable needs to be connected to the solder pad GPS (RS-232C-RXD) on the TX-RX unit.

- Black cable

The black cable needs to be connected to the solder pad (GND) on the TX-RX unit.

Note: You must set up using the KPG-135D.

7. Extended Function: COM Port 0 and COM Port 1

Location of COM Port 0 and COM Port 1 of the transceiver is shown below.

You must configure the transceiver COM Port 0 and COM Port 1 using the KPG-135D.

When you set as "Data", the Function port 1 and 2 will be automatically fixed as Input ports. The reason for this is because function port 1 (TXD) and 2 (RXD) share the same circuit path of TXD and RXD line.

8. Changing Serial Port Level

8-1. Change FNC2 (RXD) of D-SUB 15-pin connector from TTL level to RS-232C level

FNC2 (RXD) of D-SUB 15-pin connector is configured at the TTL level as the default value. But you can change this serial port level to RS-232C level by configuring the port.

Remove the R726 chip jumper and solder the clip jumper to R727.

8-2. Change FNC1 (TXD) and FNC2 (RXD) of D-SUB 15-pin connector from TTL level to RS-232C level

FNC1 (TXD) and FNC2 (RXD) of D-SUB 15-pin connector are configured at the TTL level as the default value. But you can change these serial port level to RS-232C level through the RS-232C level converter IC (IC700) by configuring the port.

Remove the R760 and R761 chip jumpers and solder the chip jumpers to R752, R753, R767 and R768.

■ In the case of 8-1.

[TTL level]

R726, R760 and R761: 0Ω chip jumper.
R727, R752, R753, R767 and R768: open.

[RS-232C level]

R727, R760 and R761: 0Ω chip jumper.
R726, R752, R753, R767 and R768: open.

■ In the case of 8-2.

[TTL level]

R726, R760 and R761: 0Ω chip jumper.
R727, R752, R753, R767 and R768: open.

[RS-232C level]

R726, R752, R753, R767 and R768: 0Ω chip jumper.
R727, R760 and R761: Open.

DISASSEMBLY FOR REPAIR

1. Disassembly Procedure

1. When removing the cabinet, first remove the two screws from the right and left with a phillips screwdriver. Then, hook your finger on the edge of the cabinet and pull it out until it is over the chassis protrusion. Remove the cabinet by prying the cabinet as shown below.

2. To remove the panel assembly, first turn the transceiver upside down. Then, insert a flat-head screwdriver into the holes of the chassis and tilt it in the direction as shown by the arrow.

3. Disconnect the flat cable from connector of the panel assembly.

4. Hook the finger to hole and while pulling the speaker holder to this side, expand the panel side of ① to ③, and remove the speaker holder from the front panel.

5. When removing the TX-RX PCB, first remove the top packing. Then, remove the solder of the antenna hot pin and positive terminal of the DC cord. Remove the 15 screws from the TX-RX PCB, power module, and audio amp.

DISASSEMBLY FOR REPAIR

Note:

When you supply power to the TX-RX PCB after removing the TX-RX PCB from the chassis, solder the positive and ground terminals of the DC cord (Recommendation: E30-3448-25) to the + and GND terminals of the TX-RX PCB.

- Pull it out behind the chassis by rotating the bush ③ of the DC cord 90 degrees in the direction of the arrow after the screw ① in the negative terminal is removed, and the positive terminal ② is removed from the chassis.

2. Precautions for Reassembly

- The tab from ① to ③ is applied the front panel first. And, ④ to ⑥ tabs inside the front panel is pushed.

- When mounting the panel assembly, pass the flat cable through the hole of the chassis as shown below then connect the flat cable to connector of the panel assembly.

- Fit the panel assembly into the two tabs of the chassis top side first. Then, fit the panel assembly into the two tabs of the chassis bottom side by turning the panel assembly.

3. Correspondence when replacing the LED (D22 and D23)

When replacing the LED (D22 and D23), it makes it to length.

CIRCUIT DESCRIPTION

1. Frequency Configuration

The receiver utilizes double conversion. The first IF is 38.85MHz and the second IF is 450kHz. The first local oscillator signal is supplied from the PLL circuit.

The PLL circuit in the transmitter generates the necessary frequencies. Figure 1 shows the frequencies.

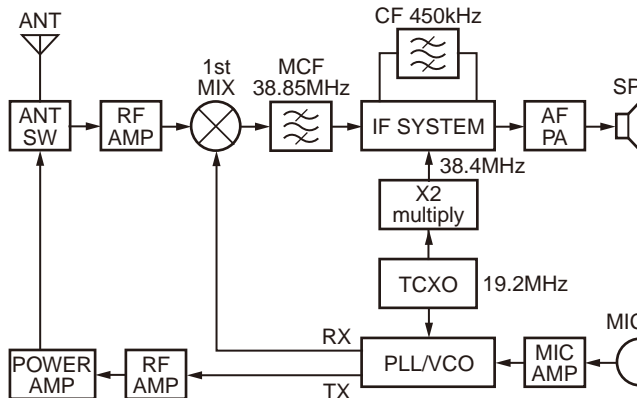

Fig. 1 Frequency configuration

2. Receiver System

The receiver is a double conversion superheterodyne.

The frequency configuration is shown in Figure 1.

2-1. Front-end RF Amplifier

An incoming signal from the antenna is applied to an RF amplifier (Q511) after passing through the transmit/receive switch circuit (D303, D304, D307 and D308) and bandpass filter (L518, L519 and varactor diodes: D506, D507).

After the signal is amplified (Q511), the signal is filtered by the bandpass (L513 and varactor diodes: D504, D505) to eliminate unwanted signals before it is passed to the first mixer.

The voltage of these diodes are controlled by tracking the MCU (IC704) center frequency of the bandpass filter. (See Figure 2)

2-2. First Mixer

The signal from the RF amplifier is heterodyned with the first local oscillator signal from the PLL frequency synthesizer circuit at the first mixer (Q507) to create a 38.85MHz first intermediate frequency (1st IF) signal. The first IF signal is then fed through one pair of monolithic crystal filters (MCF: XF500) to further remove spurious signals.

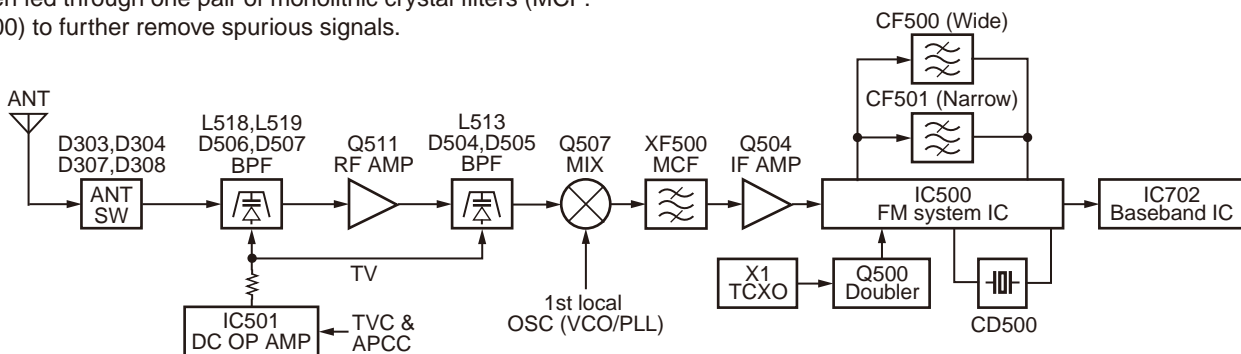

Fig. 2 Receiver System

Item	Rating
Nominal center frequency	38.85MHz
Pass bandwidth	±6.0kHz or more at 3dB
40dB stop bandwidth	±25.0kHz or less
Ripple	1.0dB or less
Insertion loss	4.0dB or less
Guaranteed attenuation	75dB (-900kHz); 50dB (+900kHz) Spurious: 40dB or more within fo±1MHz
Terminal impedance	610Ω// 3.0pF// Coupling Cap 13.0pF

Table 1 Crystal filter (L71-0659-05): XF500

2-3. IF Amplifier Circuit

The first IF signal is amplified by Q504, and enters IC500 (FM processing IC). The signal is heterodyned again with a second local oscillator signal within IC500 to create a 450kHz second IF signal. The second IF signal is then fed through a 450kHz ceramic filter (Wide: CF500, Narrow: CF501) to further eliminate unwanted signals before it is amplified and demodulated by the quadrature detector with the ceramic discriminator (CD500).

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±6.0kHz or more
50dB bandwidth	±12.5kHz or less
Ripple	2.0dB or less
Insertion loss	6.0dB or less
Guaranteed attenuation	35.0dB or more within fo±100kHz
Terminal impedance	2.0kΩ

Table 2 Ceramic filter (L72-0993-05): CF500

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±4.5kHz or more
50dB bandwidth	±10.0kHz or less
Ripple	2.0dB or less
Insertion loss	6.0dB or less
Guaranteed attenuation	55.0dB or more within fo±100kHz
Terminal impedance	2.0kΩ

Table 3 Ceramic filter (L72-0959-05): CF501

CIRCUIT DESCRIPTION

2-4. Wide/Narrow Switching Circuit

The Wide port (pin 99) and Narrow port (pin 98) of the MCU is used to switch between ceramic filters. When the Wide port is high, the ceramic filter switch diodes (D500, D501) cause CF500 to turn on to receive a Wide signal.

When the Narrow port is high, the ceramic filter switch diodes (D500, D501) cause CF501 to turn on to receive a Narrow signal.

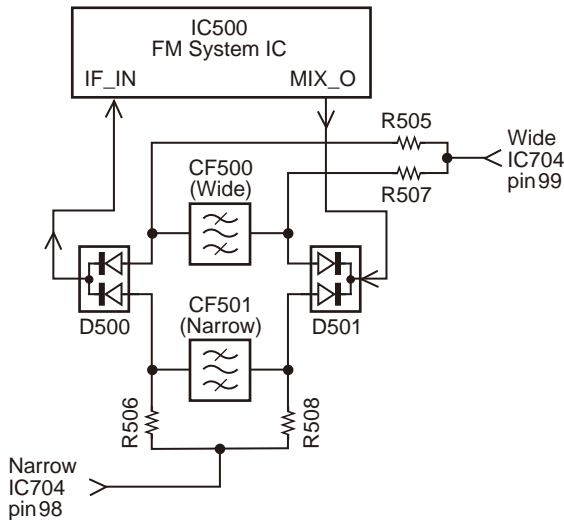

Fig. 3 Wide/Narrow switching circuit

2-5. AF Signal System

The detection signal from the FM IC (IC500) goes to the baseband IC (IC702) DISC input (pin 16) for characterizing the signal.

The AF signal output from IC702 is input to the audio power amplifier (IC706). The AF signal from IC706 switches between the internal speaker and the speaker jack (J701) output.

Fig. 4 AF signal system

2-6. Squelch Circuit

The detection output from the FM IC (IC500), a voltage is applied to the MCU (IC704). The MCU controls squelch according to the voltage (SQIN) level.

The signal from the RSSI pin of IC500 is monitored.

The electric field strength of the receive signal can be known before the SQIN voltage is input to the MCU, and the scan stop speed is improved.

Fig. 5 Squelch circuit

3. Transmitter System

3-1. Outline

The transmitter circuit produces and amplifies the desired frequency directly. It FM-modulates the carrier signal by means of a varicap diode.

3-2. Power Amplifier Circuit

The transmit output signal from the VCO passes through the transmission/reception selection diode (D17) and amplified by Q300. The amplified signal goes to the RF power module (IC300) through a low-pass filter. The lowpass filter removes unwanted high-frequency harmonic components, and the resulting signal goes through the antenna terminal.

3-3. APC Circuit

The automatic transmission power control (APC) circuit detects part of a final amplifier output with a coupler circuit and applies a voltage to IC301. IC301 compares the APC control voltage (PC) generated by the baseband IC (IC702) and DC amplifier (IC501) with the detection output voltage. IC301 generates the voltage to control IC300 and stabilizes transmission output.

The APC circuit is configured to protect over current of Q300 and IC300 due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

Fig. 7 APC circuit

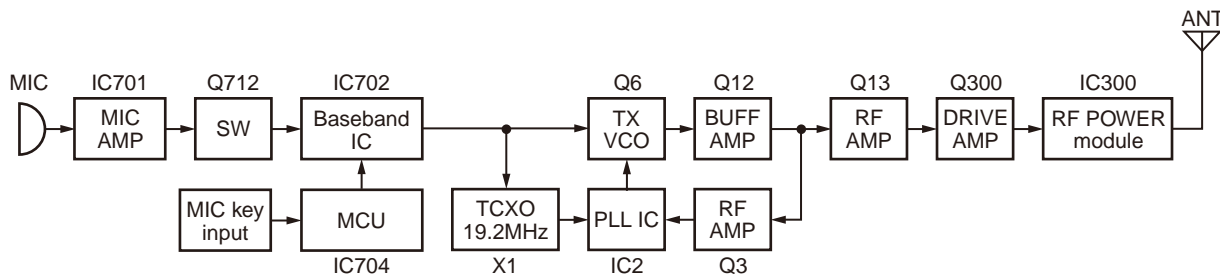

Fig. 6 Transmitter system

CIRCUIT DESCRIPTION

4. PLL Frequency Synthesizer

The PLL circuit generates the first local oscillator signal for reception and the RF signal for transmission.

4-1. PLL Circuit

The frequency step of the PLL circuit is 5, 6.25, 7.5, 10, 12.5 or 15kHz.

A 19.2MHz reference oscillator signal is divided at IC2 by a fixed counter to produce the reference frequency. The voltage controlled oscillator (VCO) output signal is buffer amplified by Q12, then multiplied by using a doubler and divided by a programmable counter in IC2.

The divided signal is compared in phase with the reference signal in the phase comparator in IC2. The output signal from the phase comparator is filtered through a low-

pass filter and passed to the VCO to control the oscillator frequency.

4-2. VCO Circuit

The operating frequency is generated by Q6 in transmit mode and Q8 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator to the varactor diodes (D6 and D7 in transmit mode and D8 and D9 in receive mode) and assist voltage to the (D10, D12 and D13 in transmit mode and D11, D14 and D15 in receive mode).

The TX/RX pin is set high in receive mode causing Q7 to turn off, and turn Q10 on. The TX/RX pin is set low in transmit mode. The outputs from Q8 and Q6 are amplified by Q12 and sent to the RF amplifiers.

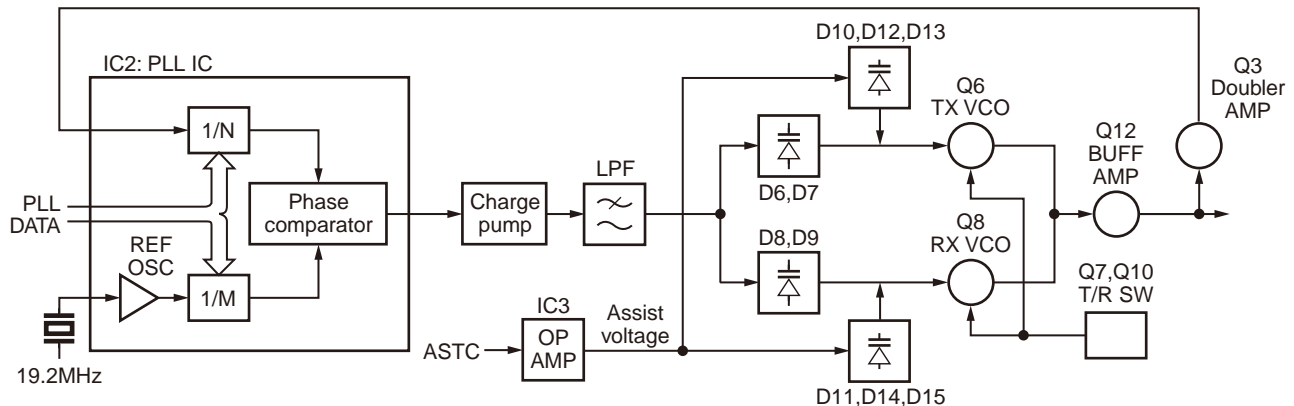

Fig. 8 PLL circuit

4-3. Unlock Circuit

During reception, the 9RC signal goes high, the 9TC signal goes low, and Q400 turns on. Q402 turns on and a voltage is applied to the collector (9R). During transmission, the 9RC signal goes low, the 9TC signal goes high and Q401 turns on. Q403 turns on and a voltage is applied to 9T.

The MCU in the control unit monitors the PLL (IC2) LD signal directly. When the PLL is unlocked during transmission, the PLL LD signal goes low. The MCU detects this signal and makes the 9TC signal low. When the 9TC signal goes low, no voltage is applied to 9T, and no signal is transmitted.

Fig. 9 Unlock circuit

5. Control Circuit

The MCU carries out the following tasks:

- 1) Controls the WIDE, NARROW, TX/RX outputs.
- 2) Controls the Baseband IC (IC702).
- 3) Controls the PLL (IC2).
- 4) Controls the display unit.

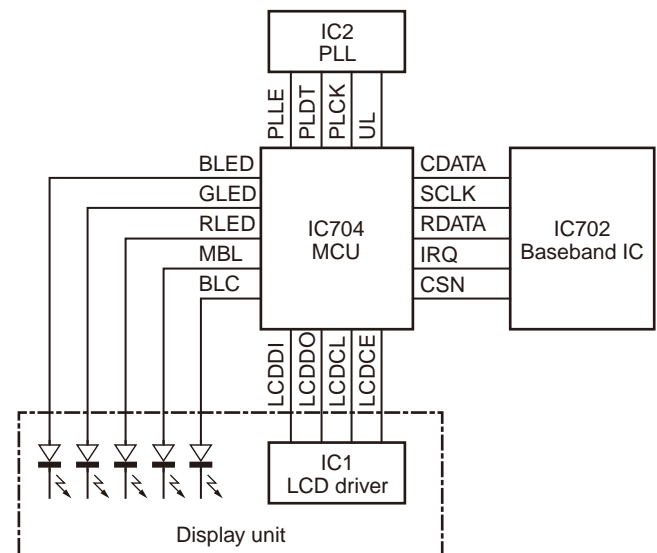

Fig. 10 Control circuit

CIRCUIT DESCRIPTION

5-1. Memory Circuit

The transceiver has a 512k-bit EEPROM (IC705). The EEPROM contains adjustment data. The MCU (IC704) controls the EEPROM through three serial data lines.

Fig. 11 Memory circuit

5-2. Display Circuit

The MCU (IC704) controls the LCD display and LEDs.

When power is on, the MCU will use the MBL line and the BLC line to control the key backlight LEDs and LCD backlight LEDs.

When the transceiver is busy, the GLED line goes high, Q6 turns on and the green LED (D23) lights after Q5 turns on. In transmit mode, the RLED line goes high, Q3 and Q4 turn on and the red LED (D23) lights.

BLED will be set high when the function select (FPU setting) is on, Q2 turns on and the blue LED (D22) lights.

The LCD driver (IC1) controls the functions of the LCD through the LCDDI, LCDDO, LCDCL, LCDCE lines from the MCU.

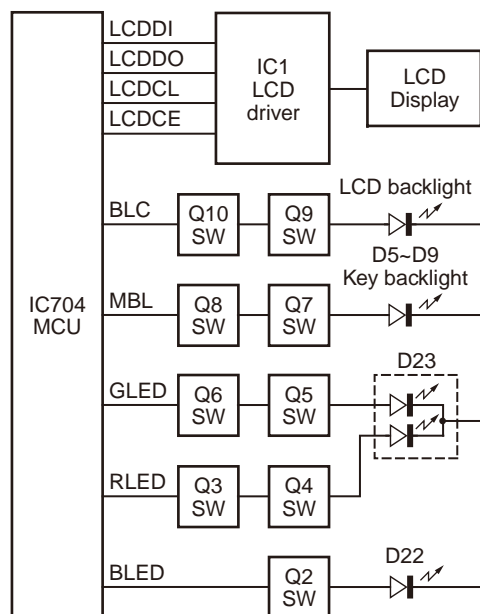

Fig. 12 Display circuit

5-3. Key Matrix Circuit

The front panel has function keys. Each of them is connected to a cross point of a matrix of the KMI1 to KMO3 ports of the LCD driver. The KMO1 to KMO3 ports are always high, while the KMI1 to KMI3 ports are always low.

The LCD driver monitors the status of the KMI1 to KMO3 ports. If the state of one of the ports changes, the LCD driver assumes that the key at the matrix point corresponding to that port has been pressed.

Fig. 13 Key matrix circuit

6. Signaling Circuit

6-1. Encode

■ Low-speed data (QT, DQT)

Low-speed data is output from pin 26 (LSDO) of the MCU (IC704). The signal passes through a low-pass CR filter. The signal is mixed with the audio signal and goes to the VCO and TCXO (X1) modulation input after signal processing in the baseband IC (IC702).

■ High-speed data (5-tone)

High-speed data (HSD) is output from pin 2 (HSDO) of the MCU.

The signal passes through a low-pass CR filter. TX deviation making an adjustment by MCU is applied to the baseband IC (IC702). The signal is mixed with the audio signal and goes to the VCO and TCXO.

The RX tone is audio output of the baseband IC (IC702) at the same time to audio power amplifier and then to the speaker.

Fig. 14 Encode

■ MSK / DTMF

MSK and DTMF signal is self generated by the baseband IC (IC702).

The TX deviation adjustment is done by the output gain of the baseband IC (IC702), and is routed to the VCO. When encoding MSK/DTMF, the microphone-input signal is muted.

6-2. Decode

■ Low-speed data (QT, DQT)

The demodulated signal from the FM IC (IC500) will input to the baseband IC (IC702) to remove frequencies of 300Hz or more.

The signal is input to pin 88 (LSDI) of the MCU. The MCU digitizes this signal, performs processing such as DC restoration, and decodes the signal.

CIRCUIT DESCRIPTION

High-speed data (5-tone)

The demodulated signal from the FM IC (IC500) is amplified by the baseband IC and passes through a band pass filter and a comparator (IC709) to detect the signal to the MCU. The MCU digitizes this signal and decodes the signal after receiving the signal at pin 5 (HSDI).

MSK/ DTMF

The demodulated signal from the FM IC (IC500) will input to the baseband IC (IC702), then the baseband IC will decode and send the decoded information to the MCU by the data line.

The MCU then processes the decoded information.

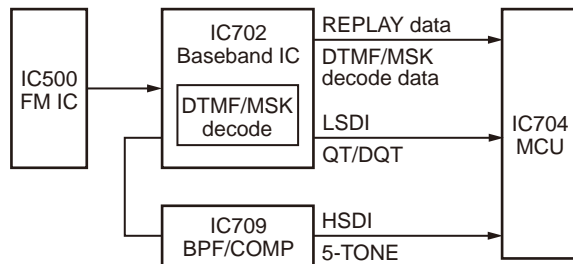

Fig. 15 Decode

7. Power Supply Circuit

When the power switch on the display unit is pressed, the power port on the display unit which is connected to port 17 (POWER), goes low, then port 52 (SBC) goes high, Q406 turns on, SB switch (Q407) turns on and power (SB) is supplied to the transceiver.

When the DC power is supplied to the transceiver, voltage regulator IC (IC401, IC402) will supply into the MCU VDD and reset the voltage detect IC (IC404). IC404 will generate signal (RESET) into the reset terminal on the MCU (IC704) to carry out a power on reset. Also, MCU (IC704) is checking on port 91 (BATT). If DC power is less than about 8.5V, the transceiver is unable to power on.

When the DC power voltage decreases from normal voltage, the INT voltage detector IC (IC403) will set to high on MCU port 18 (INT). If B line becomes less than about 8.5V, MCU will send the backup data to EEPROM (IC705) and go into STOP mode.

This circuit has an overvoltage protection circuit. If a DC voltage of 16V or higher is applied to the base of Q717, this voltage turns Q717 on and sets port 18 (INT) to low. As a result port 78 (SBC) is low, and turns Q406 and Q407 (SB) off.

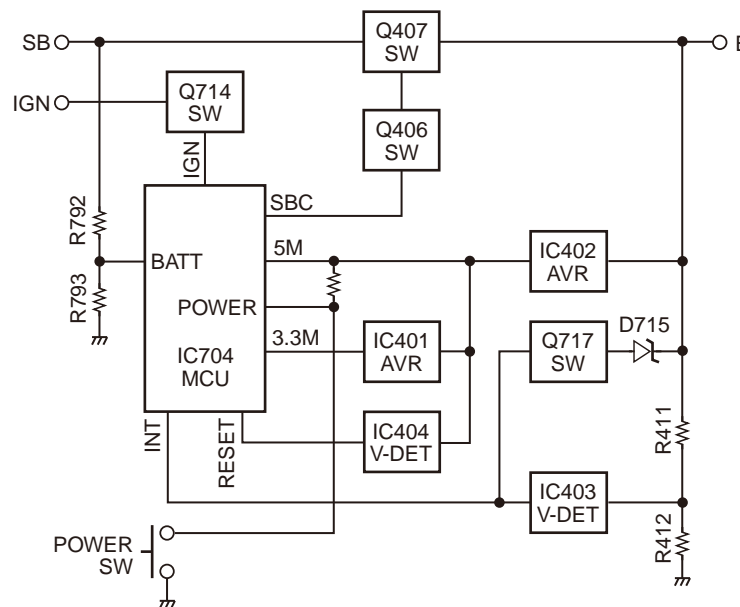

Fig. 16 Power supply circuit

SEMICONDUCTOR DATA

MCU: F3650TDFBKEBA (TX-RX unit IC704)

Pin No.	Name	I/O	Function
1	FREQ	O	Frequency alignment
2	HSDO	O	High speed data output
3	LCDDO	O	LCD data output
4	LCDCE	O	LCD enable
5	HSDI	I	High speed data input
6	E	-	GND (Only for bus control)
7	CNVSS	I	CNVSS for emulator (H: boot mode)
8	LCDDI	I	LCD data input
9	LCDCCL	O	LCD clock output
10	RESET	I	Reset
11	XOUT	O	11.0592MHz clock output
12	VSS	-	GND
13	XIN	I	11.0592MHz clock input
14	VCC1	-	+5V
15	5CC	O	5C control
16	MKEY	I/O	Mic key detect
17	POWKEY	I	Power key detect
18	INT	I	MCU stop
19	ASTSW	O	Assist speed up switch control
20	BEEP	O	Beep for side tone
21	FNC8	I/O	Function port 8
22	FNC7	I/O	Function port 7 (REC/SRC)
23	FNC6	I/O	Function port 6
24	FNC5	I/O	Function port 5
25	FNC4	I/O	Function port 4
26	LSDO	O	Low speed data output
27	SI	I	Serial data input for VGS
28	SO	O	Serial data output for VGS
29	FNC1	I/O	Function port 1 (TXD to COM port 1)
30	FNC2	I/O	Function port 2 (RXD from COM port 1)
31	ECLK	-	SCLK for emulator
32	FNC3/ EBSY	I/O	Function port 3 / BUSY for emulator
33	TXD	I/O	TXD to FPU
34	RXD	I/O	RXD from FPU
35	HOOK	I	Hook
36	PTT	I	PTT
37	BSFT	O	Beat shift (L: beat shift ON)
38	LPOSW	O	No use
39	EPM	-	EPM for emulator
40	PLLE	O	PLL lock enable
41	PLDT	O	PLL data output
42	PLCK	O	PLL clock output

Pin No.	Name	I/O	Function
43	PA	O	Public address control
44	CE	-	CE for emulator
45	CDATA	O	Command data output for baseband IC
46	RDATA	I	Reply data input for baseband IC
47	SCLK	O	Serial clock output for baseband IC
48	CSN1	O	Chip select for baseband IC
49	SP MUTE	O	Speaker mute control
50	9RC	O	9R control
51	9TC	O	9T control
52	SBC	O	SB control
53	3CC	O	3C control
54	PLPS	O	Sleep mode function for PLL IC
55	EEPS	O	EEPROM chip select
56	AMPSW	O	AF AMP switch control (L: enable / H: disable)
57	EEPQ	I	EEPROM serial data input
58	EEPD	O	EEPROM serial data output
59	EEPC	O	EEPROM serial clock output
60	VCC2	-	+3.3V
61	SCRSW	O	Scrambler switch control (Audio path)
62	VSS	-	GND
63	NC	-	No connection
64	TXRX	O	TX/RX (H: RX / L: TX)
65	BLC	O	LCD backlight control
66	MBL	O	Panel and mic key backlight control
67	NC	-	No connection
68	DST	I	Destination
69	NC	-	No connection
70	NC	-	No connection
71	STSW	O	Side tone switch control for VGS playback
72	IGN	I	Ignition
73	IRQ1	I	Interrupt request for baseband IC
74	RLED	O	Red LED for TX
75	GLED	O	Green LED for busy
76	BLED	O	Blue LED for VGS writing and signaling
77	VGSRX	O	VGS recording switch control for RX
78	NC	-	No connection
79	NC	-	No connection
80	EMG	I	Emergency key detect
81	NC	-	No connection
82	NC	-	No connection
83	UL	I	PLL unlock detect
84	DMUTE	O	Det mute control

SEMICONDUCTOR DATA

Pin No.	Name	I/O	Function
85	MIC1MUTE	O	Internal mic mute control
86	MIC2MUTE	O	External mic mute control

COMPONENTS DESCRIPTION

Display unit (X54-3740-20)

Ref. No.	Part Name	Description
IC1	IC	LCD driver
Q2	Transistor	Indication LED (BLUE) switch
Q3	Transistor	TX LED switch control
Q4	Transistor	TX LED switch
Q5	Transistor	BUSY LED switch
Q6	Transistor	BUSY LED switch control
Q7	Transistor	KEY backlight switch
Q8	Transistor	KEY backlight switch control
Q9	Transistor	LCD backlight switch control
Q10	Transistor	LCD backlight switch
D1	Zener diode	Surge protection
D2	Diode	Voltage protection
D5~9	LED	KEY backlight
D10	Diode	Voltage protection
D11~21	LED	LCD backlight
D22	LED	Indication (BLUE)
D23	LED	TX/BUSY indication
D24	LED	LCD backlight

TX-RX unit (X57-8022-71)

Ref. No.	Part Name	Description
IC1	IC	DC AMP (frequency)
IC2	IC	PLL IC
IC3	IC	Assist filter
IC300	IC	Power module
IC301	IC	DC AMP (APC)
IC400	IC	Voltage regulator (9V)
IC401	IC	Voltage regulator (3.3V)
IC402	IC	Voltage regulator (5V)
IC403	IC	Voltage detection (INT)
IC404	IC	Voltage detection (reset)
IC500	IC	FM SYSTEM IC
IC501	IC	RX BPF/ APC DC AMP
IC700	IC	RS-232C driver
IC701	IC	MIC MOD AMP
IC702	IC	Baseband IC
IC703	IC	Voltage regulator (3.3V)
IC704	IC	MCU
IC705	IC	EEPROM

COMPONENTS DESCRIPTION

Ref. No.	Part Name	Description
IC706	IC	AF power AMP
IC707,708	IC	Option setting switch
IC709	IC	HSD BPF/COMP
IC710	IC	MOD/ Option setting switch
Q1	Transistor	Buffer AMP (PLL IC clock)
Q2	Transistor	Fin filter control
Q3	Transistor	Doubler
Q4	FET	Assist filter switch
Q5	FET	Assist filter switch control
Q6	FET	TX VCO
Q7	Transistor	TX/RX VCO switch
Q8	FET	RX VCO
Q10	Transistor	T/R VCO switch
Q11	Transistor	Ripple filter
Q12	Transistor	Buffer AMP
Q13	Transistor	RF AMP
Q300	Transistor	TX drive AMP
Q400	Transistor	9R switch control
Q401	Transistor	9T switch control
Q402	Transistor	9R switch
Q403	Transistor	9T switch
Q404	FET	5C switch
Q405	FET	3.3C switch
Q406	Transistor	SB switch
Q407	FET	SB switch control
Q500	Transistor	Doubler (2nd local)
Q502	Transistor	W/N switch
Q503	Transistor	W/N switch control
Q504	Transistor	IF AMP
Q505	Transistor	Squelch noise AMP
Q506	Transistor	Squelch input switch
Q507	FET	1st mixer
Q508	Transistor	Squelch input switch
Q511	FET	RF AMP
Q700	Transistor	RS-322C RXD buffer
Q702	FET	Horn alert switch
Q703	Transistor	MIC mute switch
Q704	FET	MIC mute switch
Q705	Transistor	Horn alert switch control
Q708	Transistor	DET AMP (D-SUB)

Ref. No.	Part Name	Description
Q709	FET	TX/RX switch
Q710	Transistor	Baseband IC clock AMP
Q712	FET	Option switch
Q713	FET	DET mute switch
Q714	Transistor	IGN switch
Q715	Transistor	Beet shift switch
Q716,717	Transistor	Over voltage detect switch
Q718,719	FET	SP mute switch
Q720	Transistor	AF AMP switch
D1	Diode	PLL unlock detect
D2~4	Diode	Fin filter switch
D6,7	Variable capacitance diode	TX VCO frequency
D8,9	Variable capacitance diode	RX VCO frequency
D10	Variable capacitance diode	RX VCO assist
D11	Variable capacitance diode	TX VCO assist
D12,13	Variable capacitance diode	RX VCO assist
D14,15	Variable capacitance diode	TX VCO assist
D16	Variable capacitance diode	Modulation
D17,18	Diode	TX/RX RF switch
D300	Zener diode	Voltage protection
D301	Diode	TX power control
D302	Diode	Reverse power detection
D303,304	Diode	ANT switch
D305,306	Diode	RF power detection
D307,308	Diode	ANT switch
D309,310	Zener diode	Voltage protection
D400	Surge absorber	Voltage protection
D500,501	Diode	W/N CF switch
D502	Diode	Squelch detection
D504~507	Variable capacitance diode	RF BPF tuning
D700~711	Diode	Surge protection
D712,713	Diode	MIC AGC detection
D715	Zener diode	Voltage drop
D716	Diode	Speed up (DET mute)

EXPLODED VIEW

Parts with the exploded numbers larger than 700 are not supplied.
 If a part reference number is listed in a box on the exploded view of the PCB, that part does not come with the PCB.
 These parts must be ordered separately.

PACKING

ADJUSTMENT

Controls

■ Preparations for checking/tuning the transceiver

Before attempting to check/tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned on, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with an 4Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during checking/tuning.

Panel Test Mode

■ Test mode operation features

This transceiver has a test mode. To enter test mode, press and hold the [A] key while turning the transceiver power ON. Before the transceiver enters test mode, the frequency version information appears on the LCD momentarily. Test mode can be inhibited by programming. To exit test mode, turn the transceiver power OFF. The following functions are available in test mode.

■ Key operation

Key	“-” not appears	
	Function	Display
[S]	Shifts to Panel tuning mode	-
[A]	Function on	“-” appears
[<B]	MSK 1200bps and 2400bps	2400bps: ☒ icon appears
[C>]	Test signaling CH up	Signaling No.
[^]/[v]	Test frequency CH up/down	Channel No.
[^]/[v]	Volume up/down	-
[Δ]	Squelch on/off	🔊
■	Narrow/Wide	Narrow: “N”, Wide 5k: “W”, Wide 4k: “S”
Microphone key		
[PTT]	Transmit	-
[0] to [9] and [#], [*]	Use as the DTMF keypad. If a key is pressed during transmission, the DTMF corresponding to the key that was pressed is sent.	-

Key	“-” appears	
	Function	Display
[S]	High power / Low power	Low: “- -” icon appears
[A]	Function off	-
[<B]	Compander on/off	On: 🎧 icon appears
[C>]	Beat shift on/off	On: ⬠ icon appears
[^]/[v]	Function off	-
[^]/[v]	Function off	-
[Δ]	Squelch level 0	On: 🗲 icon appears
■	LCD all lights	LCD all point appears
Microphone key

 S : Wide 4k

■ Frequency and Signaling

The transceiver has been adjusted for the frequencies shown in the following table. When required, readjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

• Frequency (MHz)

Channel	RX Frequency	TX Frequency
1	155.05000	155.10000
2	136.05000	136.10000
3	173.95000	173.90000
4	155.00000	155.00000
5	155.20000	155.20000
6	155.40000	155.40000
7~16	-	-

ADJUSTMENT

• Signaling

Signaling No.	RX (Decode)	TX (Encode)
1	None	None
2	None	20Hz Square Wave
4	QT: 67.0Hz	QT: 67.0Hz
5	QT: 151.4Hz	QT: 151.4Hz
6	QT: 210.7Hz	QT: 210.7Hz
7	QT: 254.1Hz	QT: 254.1Hz
8	DQT: D023N	DQT: D023N
9	DQT: D754I	DQT: D754I
10	DTMF (CODE: 159D)	DTMF (CODE: 159D)
11	None	DTMF (CODE: 9)
12	None	MSK (1010..)
13	FleetSync: 100-1000	Fleet Sync: 100-1000
14	None	Single Tone (1000Hz)
16	None	DTMF Tone (1477Hz)
17	Single Tone (979.9Hz)	Single Tone (979.9Hz)
18	None	MSK PN9
19	5-tone (CCIR 12345)	5-tone (CCIR 12345)
20	Single Tone (1200Hz)	Single Tone (1200Hz)

■ Key operation

Key	Function	
	Push	Hold (1 second)
[S]	End of panel tuning mode	-
[A]	To enter 5 reference level adjustments	-
[<B]	Writes the adjustment value	-
[C>]	Go to next adjustment item	Back to last adjustment item
[^]/[v]	Adjustment value up/down	Continuation up/down
[^]/[v]	Volume level up/down	Continuation up/down
[Δ]	Squelch on/off	-
■	Selects Narrow, Wide 5k	-

■ 5 reference level adjustments frequency (MHz)

TEST CH	RX	TX
Low	136.05000	136.10000
Low'	145.55000	145.50000
Center	155.05000	155.10000
High'	164.55000	164.50000
High	173.95000	173.90000

Panel Tuning Mode

■ Transceiver tuning

(To place transceiver in tuning mode)

Press [S] key, now in tuning mode. Use [<B] key to write tuning data through tuning modes, and [^]/[v] to adjust tuning requirements (1 to 70/256/1024/4096 appears on LCD).

Use [C>] key to select the adjustment item through tuning modes. Use [A] key to adjust 5 reference level adjustments, and use [■] key to switch between Wide/Narrow.

Channel appears on LCD. Set channel according to tuning requirements.

ADJUSTMENT

Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	136 to 174MHz Frequency modulation and external modulation -127dBm/0.1μV to greater than -7dBm/100mV
2. Power Meter	Input Impedance Operation Frequency Measurement Range	50Ω 136 to 174MHz or more Vicinity of 100W
3. Deviation Meter	Frequency Range	136 to 174MHz
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	1 to 20V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. Ammeter		20A or more
8. AF Volt Meter (AF VM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 3V
9. Audio Generator (AG)	Frequency Range Output	20Hz to 20kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 4Ω Dummy Load		Approx. 4Ω, 10W or more
12. Regulated Power Supply		13.2V, approx. 20A (adjustable from 9 to 17V) Useful if ammeter equipped
13. Spectrum Analyzer	Center Frequency	50kHz to 600MHz
14. Tracking Generator	Output Voltage	100mV or more

Test cable for microphone input (E30-3360-28)

MIC connector (Front panel view)

- 1 : MBL
- 2 : SB
- 3 : GND
- 4 : PTT
- 5 : ME
- 6 : MIC
- 7 : HOOK
- 8 : DM

Tuning cable (E30-3383-05)

Adapter cable (E30-3383-05) is required for injecting an audio if PC tuning is used.
See "PC Mode" section for the connection.

BLOCK DIAGRAM

LEVEL DIAGRAM

Receiver Section

To make measurements in the RF section, connect the RF level meter. In the RF section, use a 0.01μF coupling capacitor. (The display shows the SSG input value required to obtain 12dB SINAD.)

To make measurements in the AF section, connect the AC level meter. (ANT input: -53dBm, 1kHz FM, 3kHz Dev (WIDE)) The AF output level is adjusted for a 0.47V/4Ω by the front panel AF VOL control.

Transmitter Section

To make measurements in the AF section, connect the AC level meter. AG is set so that MIC input becomes 3kHz (Wide) DEV at 1kHz MOD.

To make measurements in the RF section, connect the RF Wattmeter (50Ω).

SPECIFICATIONS

GENERAL

Frequency Range	136 ~ 174MHz		
Number of Channels.....	128		
Zones.....	128		
Channel Spacing	Wide 5k: 25kHz	Wide 4k: 20kHz	Narrow: 12.5kHz
Operating Voltage	13.2V DC (10.8~15.6V DC)		
Operating Temperature Range	-30°C to +60°C		
Frequency Stability	±2.5ppm		
Antenna Impedance	50Ω		
Dimensions (W x H x D) (Projections not included).....	160 x 43 x 136 mm		
Weight (net)	1.18kg		

RECEIVER (Measurements made per EN standard)

Sensitivity			
EIA 12dB SINAD	Wide 5k: 0.28μV	Wide 4k: 0.28μV	Narrow: 0.35μV
EN 20dB SINAD	Wide 5k: -3dBμV (0.35μV)	Wide 4k: -3dBμV (0.35μV)	Narrow: -2dBμV (0.40μV)
Adjacent Channel Selectivity	Wide 5k: 70dB	Wide 4k: 70dB	Narrow: 60dB
Intermodulation.....	Wide 5k: 65dB	Wide 4k: 65dB	Narrow: 65dB
Spurious Response Rejection	70dB		
Audio Output (4Ω impedance).....	4W with less than 5% distortion		

TRANSMITTER (Measurements made per EN standard)

RF Power Output	5~25W (High: 25W, Low: 5W)		
Spurious Emission.....	-36dBm≤1GHz, -30dBm>1GHz		
FM Noise (EIA)	Wide 5k: 45dB	Wide 4k: 43dB	Narrow: 40dB
Modulation Distortion.....	Wide 5k: Less than 3%	Wide 4k: Less than 3%	Narrow: Less than 5%
Modulation	16K0F3E, 14K0F3E, 14K0F2D, 12K0F2D, 8K50F3E, 7K50F2D		

Analog measurements made per EN standards or TIA/EIA 603 and specifications shown are typical.
Kenwood reserves the right to change specifications without prior notice or obligation.
