GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

PERSONNEL SAFETY

The following precautions are recommended for personnel safety :

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by a qualified technician only.

Note

The terms, "Wide" and "Semi wide" this service manual, are same as "W5k" and "W4k" in the KPG-67D (Field Programming Unit) menu and help text, respectively.

PRE-INSTALLATION CONSIDERNATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

GENERAL

2. PRE-INSTALLATION CHECKOUT

2-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

2-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signalling equipment operation should be verified.

3. PLANNING THE INSTALLATION

3-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

3-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

3-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

3-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

4. INSTALLATION PLANNING – CONTROL STATIONS

4-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

4-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

Note

When you modify your radio as described in system set-up, take the following precaution.

The rating of pin 7 (SB) of the accessory connector cable (KCT-19) on the rear of the radio is 13.2V (1A). Insert a 1A fuse if you use the SB pin for external equipment.

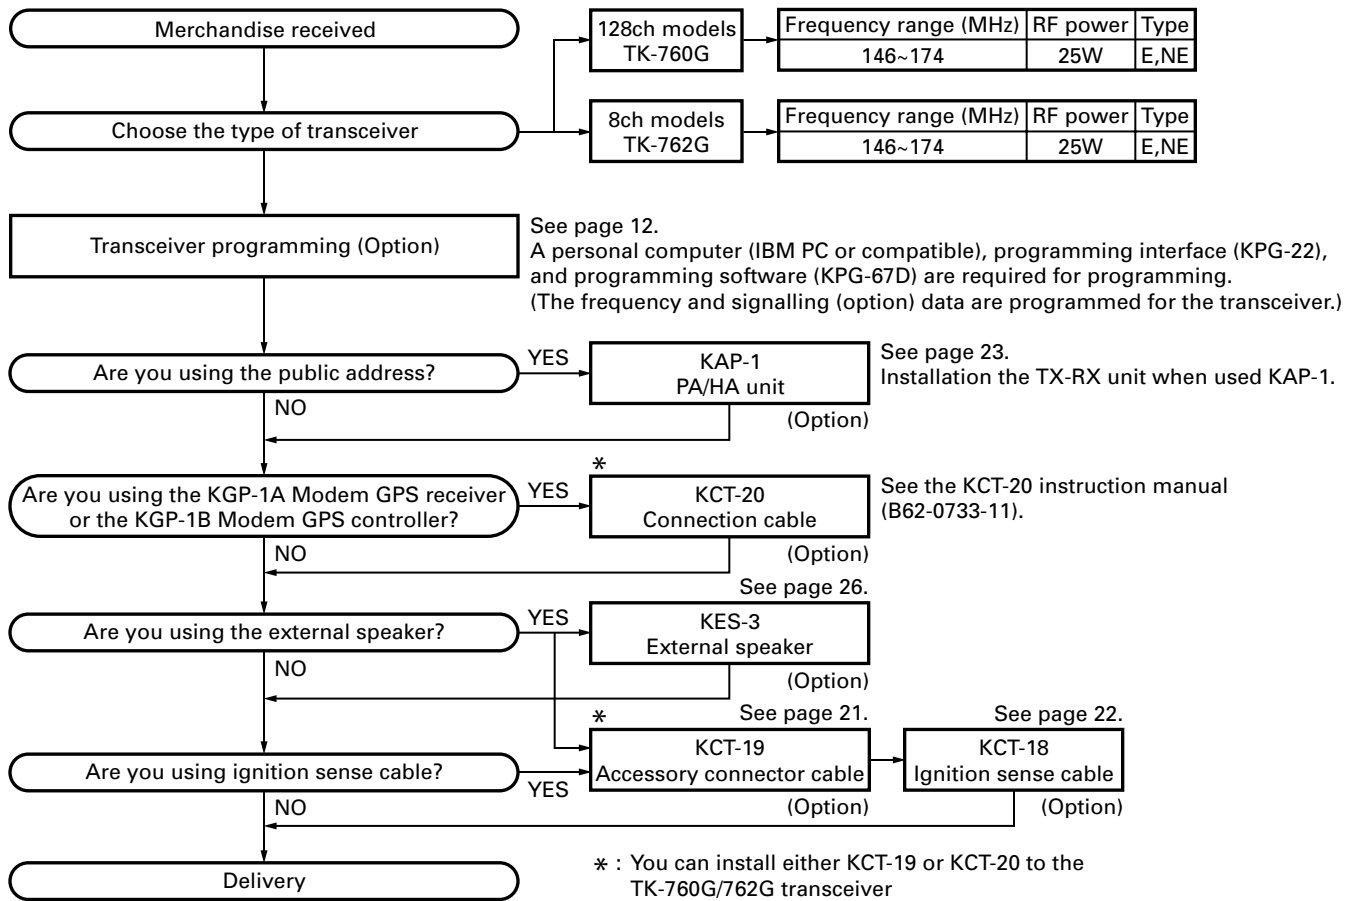

If you do not intend to use the 3.5-mm jack for the external speaker, fit the supplied speaker-jack cap (B09-0235-05) to stop dust and sand getting in.

TK-760/G(N)/762G/(N)

SYSTEM SET-UP

OPERATING FEATURES

1. Controls and Functions

1-1. TK-760G Front Panel

1-2. TK-762G Front Panel

1-3. Speaker/Microphone

■ Optional KMC-30

- ① IO (Power) switch
Press to switch the transceiver ON (or OFF).
- ② LED indicator
Lights red while transmitting. Lights green while receiving. If programmed by the dealer, flashes orange while receiving a Code Squelch or Selective Call code, or a 2-Tone code that matches the one set up in your transceiver.
- ③ ▲/▼ keys
These are PF (Programmable Function) keys. Press each key to activate its auxiliary function. The default settings are Volume Up and Volume Down.
- ④ Display
See right.
- ⑤ ▲/▼ keys
These are PF (Programmable Function) keys. Press each key to activate its auxiliary function. The default settings are Channel Up and Channel Down.
- ⑥ Microphone jack
Insert the microphone plug into this connector.
- ⑦ MON, A, D/A, ▼, ▲, and SCN keys (TK-760G)
MON, ○, ●, and A keys (TK-762G)
These are PF (Programmable Function) keys. Press each key to activate its auxiliary function.
- ⑧ PTT (Push-to-Talk) switch
Press this switch, then speak into the microphone to call a station.

1-4. Display

■ TK-760G

Indicator	Description
	Not used in this transceiver.
	Appears when the selected channel is busy.
	Appears when QT, DQT, DTMF, 2-Tone, or 5-tone decoding is deactivated (by pressing the Monitor or Squelch key).
CALL	If programmed by your dealer, appears when you receive a Code Squelch, Selective Call, 2-Tone code, 5-Tone code. Also appears when you transmit using Code Squelch or Selective Call.
SCN	Appears while scanning.
AUX	Appears when the AUX port is activated.
A	Appears when the selected channel is included in the scanning sequence.
	Displays the selected channel number (or name), DTMF digits (when entering digits, confirming digits, or making a call), and messages received via Selective Call.

■ TK-762G

Indicator	Description
MONI	Appears when QT, DQT, DTMF, 2-Tone, or 5-Tone decoding is deactivated (by pressing the Monitor or Squelch key).
AUX	Appears when the AUX port is activated. Flashes orange when the Talk-Around feature is active.
	Displays the selected channel number.

TK-760/G(N)/762G/(N)

OPERATING FEATURES

1-5. Rear panel

1-6. Programmable Auxiliary Functions

The following keys can be programmed with the functions listed below.

TK-760G : \swarrow/\searrow (left side), \swarrow/\searrow (right side), MON, A, D/A, ∇ , \blacktriangle , and SCN.

TK-762G : \swarrow/\searrow (left side), \swarrow/\searrow (right side), MON, \circ , \bullet , and A.

Function	DTMF/2-Tone	5-Tone
AUX	Yes	Yes
Call 1	No	Yes
Call 2	No	Yes
Channel Down	Yes	Yes
Channel Up	Yes	Yes
Display Character (TK-760G only)	Yes	Yes
Group Down	Yes	Yes
Group Up	Yes	Yes
Home Channel	Yes	Yes
Horn Alert	Yes	Yes
Key Lock	Yes	Yes
Monitor	Yes	Yes
Monitor Momentary	Yes	Yes
None (No function)	Yes	Yes
Public Address	Yes	Yes
Redial	Yes	No
Scan (TK-760G only)	Yes	Yes
Scan Del/Add (TK-760G only)	Yes	Yes
Selcall Entry	No	Yes
Squelch Momentary	Yes	Yes
Squelch Off	Yes	Yes
Talk-Around	Yes	Yes
Volume Up	Yes	Yes
Volume Down	Yes	Yes
2-Tone Encode*	Yes	No

* : The code for the TK-762G transceiver is not selectable. You can transmit only one 2-Tone code, which is pre-programmed in the transceiver.

The Emergency function can also be programmed. However, it can only be used with a foot switch.

2. Operation Features

The TK-760G/762G is a VHF FM radio designed to operate in conventional format. The programmable features are summarized.

3. Transceiver Controls and Indicators

3-1. Front Panel Controls

All the keys on the front panel are momentary-type push buttons. The functions of these keys are explained below.

- **POWER key**

Transceiver POWER key. When the power is switched off, all the parameters are stored in memory. When the power is switched on again, the transceiver returns to the previous conditions.

- **CHANNEL UP/DOWN key (Programmable)**

- **$\blacktriangle/\blacktriangledown$ key (Programmable) : TK-760G only**

- **SCAN key (Programmable) : TK-760G only**

- **MONITOR key (Programmable)**

- **A, D/A key (Programmable) : TK-760G only**

- **\circ, \bullet, A key (Programmable) : TK-762G only**

- **VOLUME UP/DOWN key (Programmable)**

- **BUSY/TX LED**

The BUSY indicator (Green LED) shows that the channel is in use. The TX indicator (Red LED) shows that you are transmitting.

3-2. Programmable Keys

The FPU (KPG-67D) enables programmable keys to select the following functions.

AUX, Channel down, Channel up, Display character *1, Emergency (Only foot key), Group down *1, Group up *1, Home channel, Horn alert, Key lock, Squelch Momentary, Squelch Off, Monitor Momentary, Monitor, Public address, Redial, Scan *1, Scan del/add *1, Talk around, Volume down, Volume up, 2-tone encode and None.

These functions the FPU programs to the function keys and described in the following sections.

*1 : TK-760G only.

- **AUX**

If this key is pressed, "AUX" icon lights on the display and AUX port which is inside of the transceiver turns to the high level. If pressed again, the "AUX" icon goes off and the AUX ports turns to the lower level.

- **Channel up/down**

When the key is pressed each time, the channel number to be selected is incremented/decremented and repeats if held for one second or longer.

OPERATING FEATURES

- **Display character (TK-760G only)**

This key switches the LCD display between the group and channel number and the group and channel name.

- **Emergency**

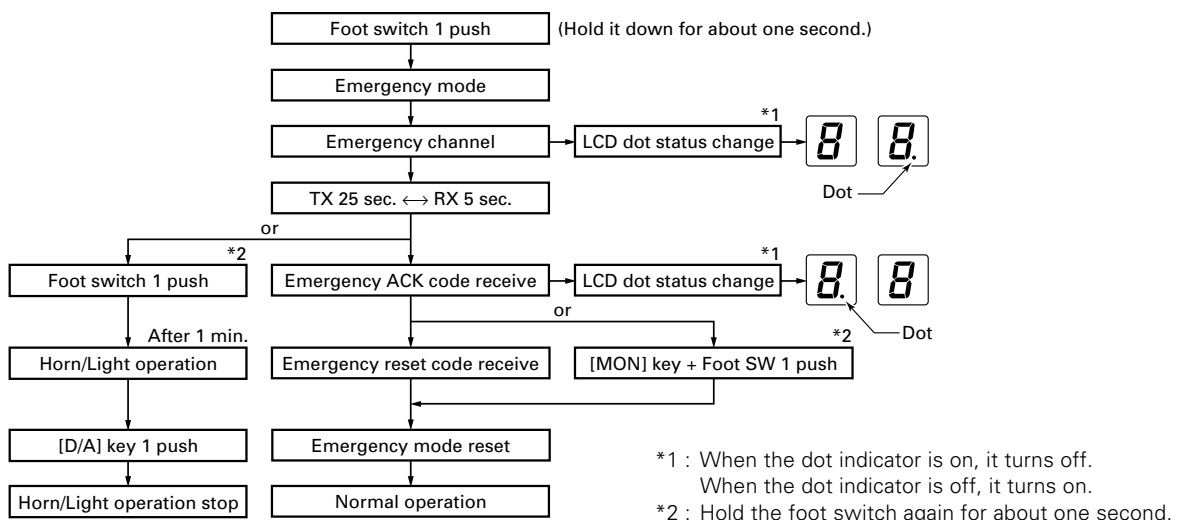

Pressing this key for longer than 1 second causes the transceiver to enter the emergency mode. The transceiver jumps to the programmed "Emergency the group and channel" and transmits for 25 seconds.

The transceiver disables mic mute while transmitting. After finishing transmission, the transceiver receives for 5 seconds. The transceiver mutes the speaker while receiving. Following the above sequence, the transceiver continues to transmit and receive.

- **Emergency mode system chart (TK-760G)**

- **Emergency mode system chart (TK-762G)**

OPERATING FEATURES

- **Group up/down (TK-760G only)**

When the key is pressed each time, the group number to be selected is incremented/decremented and repeats if held for one second or longer.

- **Home channel**

Press this key once, the channel switches to the pre-programmed home channel.

- **Horn alert**

If you are called from the base station using 2-tone/DTMF while you are away from your transceiver, you will be alerted by the vehicle horn or some other type of external alert. To turn the horn alert function on, press this key. A confirmation tone sounds, (and the display shows "HA" on the LCD *1).

If this key is pressed again, the horn alert function is turned off.

*1 : TK-760G only.

- **Key lock**

Pressing this key causes the transceiver to accept entry of only the [Vol Up/Down], [Key lock], [PTT], [Monitor A], [Monitor B], [Monitor C], [Monitor D], and [Emergency] keys.

- **Monitor**

Used to release signalling or squelch when operating as a conventional. It is also used to reset option signalling.

- **Public address**

Public address amplifies the microphone audio, and outputs it through a PA speaker. PA is activated by pressing this key. A confirmation tone sounds, (and the display shows "PA" *1). PA can be activated at anytime (scanning or non-scanning).

If this key is pressed again, a confirmation tone will sound, (the display will return to the normal channel or SCAN display *1), and the PA function will turn off.

*1 : TK-760G only.

- **Redial**

If you press this key when the group/channel is displayed, the last transmitted DTMF code will appear on the display. Pressing the PTT switch at this time will transmit the displayed DTMF code.

- **Scan (TK-760G only)**

Press this key starts scanning. Pressing this key stops scanning.

- **Scan del/add (TK-760G only)**

This key switches the currently displayed channel between "Delete" and "Add".

The "Add" channel contained in the scan sequence, and "Delete" channel is not contained. In the scan mode, this key switches the channel delete or add temporarily.

- **Talk around**

Press this key, the transceiver uses the receive frequency and the tone for transmission.

The operator can call the other party directory (without repeater). Press this key again, the talk around function goes off.

- **Volume up/down**

When the key is pressed, the volume level is increased/decreased and repeats if held for 200ms or longer.

- **None**

Sounds error operation beep, and no action will occur. Use this function when the transceiver is required to be more simple operated.

- **Call 1 or 2 (5-Tone)**

Press the [CALL #] key to transmit the 5-tone code that is programmed to "Call #" in the channel data.

- **Selcall entry**

Press [Selcall entry] key to enter the desired Selcall code you want to call.

When you enter Selcall entry mode, the "TX address" number appears on the LCD.

To enter Selcall number, use the keypad. You can also use the channel selector to select the number.

4. Scan Operating (TK-760G only)

■ Scan types

- **Single group scan**

You can scan all valid (ADD) channels in the displayed group that can be selected with the group up/down key.

- **Multiple group scan**

You can scan all valid (ADD) channels in the all valid (ADD) group.

■ SCAN start condition

One or more non-priority channels must be added to all channels that can be scanned. The transceiver must be in normal receive mode (PTT off).

When you activate the key programmed to the scan function, the scan starts. The scan icon "SCN" lights and "SCAN" is indicated on alphanumeric display.

■ Scan stop condition

The scan stops temporarily if the following conditions are satisfied.

- 1) A carrier is detected, then signalling matches on channels for which receive the signalling is set by the programming software.
- 2) A carrier is detected on the channels for which receiving signalling is not set by the programming software or when the monitor (signalling cancel) function is activated.

OPERATING FEATURES

■ Scan channel types

- 1) Priority channel is the most important channel for the scan, and always detects a signal during scan and when the scan stops temporarily.
- 2) Non-priority channels detects a signal during scan. For the channels that can be selected with the group or channel up/down key when the scan does not occur, adds an indicator "A" lights.

■ Priority channel setting

A priority channel can be set as follows with the programming software (KPG-67D).

- 1) Specify a priority channel as a fixed priority channel.
- 2) Make a selected channel, a priority channel.

■ Scan type according to the priority channel

- 1) When no priority channel is set : Only the non-priority channels are scanned.
If a non-priority channel stops temporarily, it stops until there is no signal on the channel.
- 2) When priority channel is set : Either priority channel is scanned.
If a non-priority channel stops temporarily, a priority channel signal is detected at certain intervals.
If a priority channel stops temporarily, it stops until there is no signal on the priority channel.

■ Revert channel

The revert channel is used to transmit during scanning and set by the programming software (KPG-67D).

- 1) Priority
The transceiver reverts to the priority channel.
- 2) Priority with talkback
The transceiver reverts to the priority channel.
If you press PTT during a resume timer (dropout delay time, TX dwell time) or calling, you can transmit on current channel to answer to the call however revert channel is set to priority channel.
After resume time, scan re-starts and transmission channel is return to priority channel.
- 3) Selected channel
The transceiver reverts to the channel before scanning or the channel that you changed during scan.
- 4) Last called channel
The transceiver reverts to the last called channel during the scan.
- 5) Last used channel
The transceiver reverts to the last used (transmitted) channel during scan. "Last used" revert channel includes talkback function.
- 6) Selected with talkback
The transceiver reverts to the channel before scanning or the channel that you changed during scan.

■ Scan end

When you reactivate the key programmed to the scan function during scan mode, the scan ends.

The scan icon "SCN" and "SCAN" display goes off.

■ Temporarily delete/add

It is possible to delete or add channel temporarily during scan. When scan stops on unnecessary channel for example by interference of the other party, activate the delete/add function (for example press the key), then that channel is deleted temporarily and scan re-start immediately.

When you would like to add the deleted channel temporarily to scan sequence, select the desired (deleted) channel during scan, activate the delete/add function (for example press the key) before scan re-start.

That channel is added temporarily to scan sequence. The temporary deleted or added channels are returns to pre-set delete/add, when the transceiver exits from scan mode.

5. Details of Features

■ Time-out timer

The time-out timer can be programmed in 15 seconds increments from 15 seconds to ten minutes. If the transmitter is keyed continuously for longer than the programmed time, the transmitter is disabled and a warning tone sounds while the PTT button is held down. The alert tone stops when the PTT button is released.

■ PTT ID

PTT ID provides a DTMF ANI to be sent with every time PTT (beginning of transmission, end of transmission, or both).

You can program PTT ID "on" or "off" for each group. The contents of ID are programmed for each channel.

The timing that the transceiver sends ID is programmable.

BOT : DTMF ID (BOT) is sent on beginning of transmission.

EOT : DTMF ID (EOT) is sent on end of transmission.

Both : DTMF ID (BOT) is sent on beginning of transmission and DTMF ID (EOT) is sent on end of transmission.

■ Radio password (TK-760G only)

When the password is set in the transceiver, user can not use the transceiver unless enter the correct password.

This code can be up to 6 digits from 0 to 9 and input with the key, and "SCN" key.

■ Off hook decode

If the Off hook decode function has been enabled, removing and replacing the microphone on the hook has no effect for decoding QT/DQT and option signalling.

■ "TOT" pre-alert

The transceiver has "TOT" pre-alert timer. This parameter selects the time at which the transceiver generates "TOT" pre-alert tone before "TOT" is expired.

"TOT" will be expired when the selected time passes from a "TOT" pre-alert tone.

OPERATING FEATURES

■ "TOT" re-key time

The transceiver has "TOT" re-key timer. This timer is the time you can not transmit after "TOT" exceeded. After "TOT" re-key time expired you can transmit again.

■ "TOT" reset time

The transceiver has "TOT" reset timer. This timer is the minimum wait time allowed during a transmission that will reset the "TOT" count.

"TOT" reset time causes the "TOT" to continue even after PTT is released unless the "TOT" reset timer has expired.

■ Clear to transpond

The transceiver waits the transpond of 5-tone/2-tone / DTMF if channel is busy until channel open. This feature prevents the interference to other party.

6. Option Signalling (DTMF/2-Tone)

Built-in DTMF decoder is available for option signalling.

Built-in 2-tone decoder is available for option signalling.

It is possible to use individual call, group call, D.B.D. (Dead Beat Disable). D.B.D. is used with DTMF only.

If the option signalling matches, a predetermined action will occur.

If option signalling matches on a group/channel which is set up with option signalling, the option signalling indicator (CALL) will flash and option signalling will be released. The transpond or alert tone will sound.

The orange LED will flash.

While option signalling matches (or if option signalling is deactivated when you are transmitting), you can mute or unmute QT/DQT/Carrier.

■ AND/OR

You can select AND or OR for option signalling match conditions.

	Alert/Transpond
AND	QT/DQT+DTMF (2-tone); Option matches = Action
OR	QT/DQT+DTMF (2-tone); Option matches = Action
	AF mute open
AND	QT/DQT+DTMF (2-tone); Option matches = Action
OR	QT/DQT/ID; Signalling only matches = Action

With OR set up, alert/transpond will not function with only DTMF.

With OR set up, AF mute will not release when only DTMF matches.

With a conventional channel not set up with QT or DQT, only the carrier is considered when signalling matches.

■ Auto Reset

If option signalling matches a group set up with option signalling, option signalling is released. After matching option signalling, option signalling will temporarily reset automatically.

■ Dead Beat Disable

If the D.B.D. code matches, a predetermined action will occur. Whether option signalling is activated or not, when D.B.D. matches on any channel, the transceiver will become TX inhibited or TX/RX inhibited. While D.B.D. is active, if the D.B.D. code + "#" code is received, D.B.D. will deactivate.

When D.B.D. matches, transpond will function. Alert will not be output, and option signalling match icon will not appear.

7. Audible User Feedback Tones

The transceiver outputs various combinations of tones to notify the user of the transceiver operating state. The main tones are listed below.

The high tone is 1477Hz, the mid tone is 941Hz, and the low tone is 770Hz.

■ Power on tone

This tone is output when the transceiver is turned on. (The high tone is output for 500ms.)

■ Alert tone

This tone is output when the transceiver is TX inhibition for TOT, and PLL unlocked. It is output until the PTT button is released.

■ DBD on tone

When a D.B.D. code is received, transpond tone sounds.

■ DBD off tone

When a D.B.D. release code is received, transpond tone sounds.

■ Busy tone

Sounds in conventional mode, when busy channel lock-out is functioning. You can select yes or no for the optional feature's warning tone.

■ Group call tone

Sounds when a group call with the correct DTMF/2-tone option signalling is received, repeats 7 times. You can select yes or no for the optional feature's warning tone.

■ Individual call tone

Sounds when an individual call with the correct DTMF/2-tone option signalling is received. You can select yes or no for the optional feature's warning tone.

■ Key press tone [A]

Sounds when a key is pressed. For toggle keys, sounds when toggle function is turned on (key press tone [B] sounds when it is turned off). You can select yes or no for the optional feature's control tone.

OPERATING FEATURES / REALIGNMENT

■ Key press tone [B]

Sounds when a key is pressed. For toggle keys, sounds when the toggle function is turned off (key press tone [A] sounds when it is turned on). You can select yes or no for the optional feature's control tone.

■ Key input error tone

Sounds when a key is pressed but that key cannot be used. You can select yes or no for the optional feature's warning tone.

■ Roll over tone

Sounds in Conventional format at the smallest group/channel. You can select yes or no for the optional feature's control tone.

■ Transpond tone

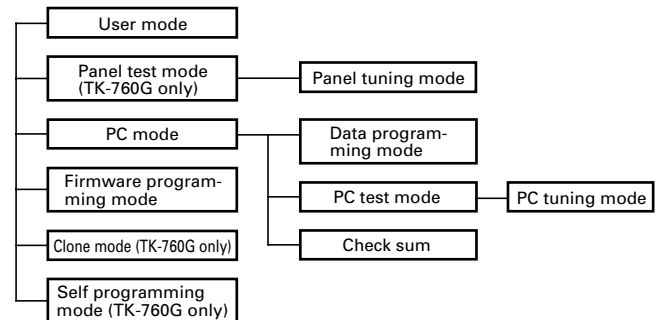

Sounds when an individual call with the correct DTMF/2-tone option signalling is received. For group calls, only the group tone will sound, not the transpond tone.

■ Pre alert tone

Sounds prior to the TOT TX inhibit activation. If TOT pre alert is set, the tone sounds at the amount of time programmed, before the TOT expires (TOT time – TOT pre alert time = Pre alert tone sounding time). You can select yes or no for the optional feature's warning tone.

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the radio.
PC mode	Used for communication between the radio and PC (IBM compatible).
Data programming mode	Used to read and write frequency data and other features to and from the radio.
PC test mode	Used to check the radio using the PC. This feature is included in the FPU. See panel tuning.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode	Used to transfer programming data from one radio to another.
Self programming mode	Frequency, signalling and features write to the radio.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[SCN]+Power ON (Two seconds)
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode]+[SCN]
Firmware programming mode	[CH ▲]+Power ON (Two seconds)
Clone mode	[▼]+Power ON (Two seconds)
Self programming mode	[A]+Power ON (Two seconds)

3. For the Panel Test Mode (TK-760G only)

Setting method refer to ADJUSTMENT.

3-1. For the Panel Tuning Mode

Setting method refer to ADJUSTMENT.

TK-760G/(N)/762G/(N)

REALIGNMENT

4. Check Sum

Executing this function, "TUNING" appears on the display of the TK-760G while calculation the check sum.

When the calculation is completed, the display returns to normal and PC displays the check sum of the radio.

5. PC Mode

5-1. Preface

The TK-760G/762G transceiver is programmed using a personal computer, a programming interface (KPG-46) and programming software (KPG-67D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

5-2. Connection Procedure

1. Connect the TK-760G/762G to the personal computer with the interface cable.
2. When the Power is switched on, user mode can be entered immediately. When the PC sends a command, the radio enters PC mode.
When data is transmitted from transceiver, the red LED blink.
When data is received by the transceiver, the green LED blink.

Notes :

- The data stored in the personal computer must match model type when it is written into the flash memory.
- Change the TK-760G/762G to PC mode, then attach the interface cable.

5-3. KPG-46 Description

(PC programming interface cable : Option)

The KPG-46 is required to interface the TK-760G/762G with the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46 connects the modular microphone jack of the TK-760G/762G to the computers RS-232C serial port.

Fig. 1

5-4. Programming Software KPG-67D Description

The KPG-67D is programming software for the transceiver supplied on two 3.5" floppy disks. This software runs under MS-DOS 3.1 or later on an IBM-PC or compatible machine.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

We recommend that install the KPG-67D for example to harddisk first then use it.

6. Firmware Programming Mode

6-1. Preface

Flash memory is mounted on the TK-760G/762G. This allows the TK-760G/762G to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

6-2. Connection Procedure

Connect the TK-760G/762G to the personal computer (IBM PC or compatible) with the interface cable (KPG-46). (Connection is the same as in the PC Mode.)

6-3. Programming

1. Start up the programming software (KPG-67D), select "firmware program" in the "Program" item, and press the Return key on your personal computer. This starts up the firmware programmer.
2. The top screen is displayed. Press any key to advance to the next screen.
3. Set the communications speed (normally, 57600 bps) and communications port in the Setup item.
4. Set the firmware to be updated by File select (=F1).
5. Turn the TK-760G/762G Power ON with the [CH \wedge] switch held down. Hold the switch down for two seconds until the display changes to "PROG 576", the BUSY/TX LED lights orange. When "PROG 576" appears, release your finger from the switch.
6. Check the connection between the TK-760G/762G and the personal computer, and make sure that the TK-760G/762G is in Program mode.
7. Press F10 on the personal computer. A window opens on the display to indicate the writing progress. When the TK-760G/762G starts to receive data, the BUSY/TX LED lights green.
8. If writing ends successfully, the LED on the TK-760G/762G goes off and the checksum is displayed. (Since the TK-762G does not have a display, check the checksum with the FPU (KPG-67D).)
9. If you want to continue programming other TK-760G/762G, repeat steps 5 to 8.

REALIGNMENT

Notes :

- To start the Firmware Programmer from KPG-67D, the FPRO path must be set up by the KPG-67D setup.
- This mode cannot be entered if the Firmware programming mode is set to Disable in the Programming software (KPG-67D).
- When programming the firmware, it is recommend to copy the data from the floppy disk to your hard disk before you update the radio firmware.
Directly copying from the floppy disk to the radio may not work because the access speed is too slow.

6-4. Function

1. If you press the [MON] switch while "PROG 576" is displayed, the checksum is displayed. If you press the [MON] switch again (while the checksum is displayed), "PROG 576" is redisplayed.
2. If you press the [A] switch while "PROG 576" is displayed, the display changes to "PROG 192" to indicate that the write speed is low speed (19200 bps). If you press the [A] switch again while "PROG 192" is displayed, the display changes to "PROG 384", and the write speed becomes the middle speed (38400 bps). If you press the [A] switch again while "PROG 384" is displayed, the display returns to "PROG 576".

Note :

TK-762G indicate

19200 bps : The LED flashes green and red alternately.

38400 bps : The LED flashes orange.

57600 bps : The LED lights orange.

Normally, write in the high-speed mode.

7. Clone Mode (TK-760G only)

Programming data can be transferred from one radio to another by connecting them via their modular microphone jacks. The operation is as follows (the transmit radio is the master and the receive radio is the slave).

1. Turn the master TK-760G power ON with the [▼] key held down. If the password is set to the TK-760G, the TK-760G displays "CLN LOCK". If the password is not set, the TK-760G displays "CLONE".
2. When "CLN LOCK" is displayed, only the [CH▲/▼] key and [SCN], and [0] to [9] keys can be accepted. When you enter the correct password, and "CLONE" is displayed, the TK-760G can be used as the cloning master. The following describes how to enter the password.
3. How to enter the password with the microphone keypad; If you press a key while "CLN LOCK" is displayed, the number that was pressed is displayed on the TK-760G. Each press of the key shifts the display in order to the left. When you enter the password and press the [SCN] key, "CLONE" is displayed if the entered password is correct. If the password is incorrect, "CLN LOCK" is redisplayed.

How to enter the password with the [CH▲/▼] key;

If the [CH▲/▼] key is pressed while "CLN LOCK" is displayed, numbers (0 to 9) are displayed flashing. When

you press the [SCN] key, the correctly selected number is determined, and the display shifts to the left. If you press the [SCN] key after entering the password in this procedure, "CLONE" is displayed if the entered password is correct. If the password is incorrect, "CLN LOCK" is redisplayed.

4. Power on the slave TK-760G.
5. Connect the cloning cable (No. E30-3382-05) to the modular microphone jacks on the master and slave.
6. Press the [SCN] key on the master while the master displays "CLONE". The data of the master is sent to the slave. While the slave is receiving the data, "-PC-" is displayed. When cloning of data is completed, the master displays "END", and the slave automatically operates in the User mode. The slave can then be operated by the same program as the master.
7. The other slave can be continuously cloned. When the [SCN] key on the master is pressed while the master displays "END", the master displays "CLONE". Carry out the operation in step 4 to 6.

Note :

You can clone the programmed data between the transceiver frequency version must be same.

Fig. 2

8. Self Programming Mode (TK-760G only)

Write mode for frequency data and signalling etc. Mainly used by the person maintaining the user equipment.

REALIGNMENT

8-1. Enter to the Self Programming Mode

Remove D507 (Figure 3) from the TX-RX unit. Hold down the [A] key and turn the power switch on. When enter the self programming mode, "SELF" is displayed. The mode changes autoically to Model Select Mode in about one second, and set up radio type, radio band & channel type and frequency version.

Note :

This mode (self programming mode) cannot be set when it has been disabled with the FPU.

Fig. 3

9. Channel Setting Mode

Each channel can be setup in its action mode by using the panel keys.

- Pressing [MON] when "SELF" is diplayed, sets channel setting mode.
- Select an item set using [▼] then change the selection with the [CH▲/▼].
- The data displayed using [D/A] is stored in the memory and then proceeds to the next item.
- Pressing [▼] proceeds to the next item without storing it in the memory.
- Press [MON] to set the display to "SELF" and return to reset (default) status.

The setup items for channel setting mode are listed below.

No.	Function	Choices	Display	Remarks
	Select channel	1~128	__1-__1__ __1-128__	[▼] : Group selection/ Channel selection change
	Select group	1~128	__1-__1__ 128-__1__	
1	RX frequency	Step 2.5kHz~1MHz	STP__250 STP__1M	Display when an item is selected or when a step is changed (about 0.5 seconds) [A] : Step change 5.0, 6.25kHz, 1MHz step
		Blank	R. - - - - -	
		100.0000~ 550.0000MHz	R.150.0000	[▲] : Frequency on/ blank switching The right most dot indicates 50Hz digit (On=5, Off=0)
2	RX signalling	Off	- - - - -	[▲] : Off/QT/DQT switching [A] : Mode switching [SCN] : Normal/ Inverse switching
		QT 67.0~250.3Hz (EIA mode)	QT__67.0__ QT__250.3__	
		QT 67.0~254.1Hz (0.1Hz step mode)	QT__67.0* QT__254.1*	
		DQT 000~777 (Normal) (1 step mode)	DQT000N* DQT777N*	
		DQT 023~754 (Normal) (Standard table mode)	DQT023N_ DQT754N_	
		DQT 000~777 (Inverse) (1 step mode)	DQT000I* DQT777I*	
		DQT 023~754 (Inverse) (Standard table mode)	DQT023I_ DQT754I_	
3	TX frequency	Step 2.5kHz~1MHz	STP__250 STP__1M	Display when an item is selected or when a step is changed (about 0.5 seconds) [A] : Step change 5.0, 6.25kHz, 1MHz step

REALIGNMENT

9-1. Flow Chart

REALIGNMENT

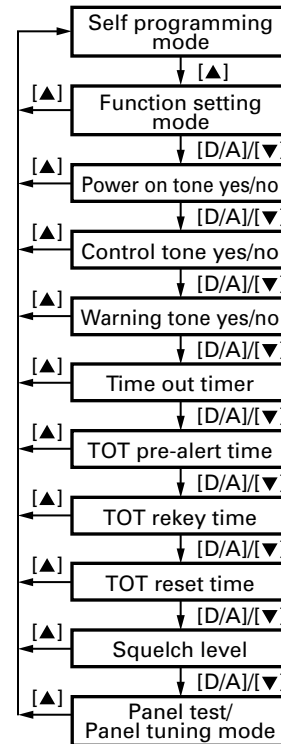

10. Function Setting Mode

All channels can be set up together in the action mode by using the panel keys.

- Pressing [▲] when "SELF" is displayed, sets the function setting mode.
- Select an item set using [▼] then change the selection with the [CH▲/▼].
- The data displayed using [D/A] is stored in the memory and then proceeds to the next item.
- Pressing [▼] proceeds to the next item without storing it in the memory.
- Press [▲] to display "SELF" and return to reset (default) status.

No.	Function	Choices	Display	Remarks
Optional feature				
1	Power on tone	YES/NO	PONT_YES	Default : Yes
2	Control tone	YES/NO	CNTT_YES	Default : Yes
3	Warning tone	YES/NO	WART_YES	Default : Yes

9	Panel test/ panel tuning mode	Enable	PTM__ENA	←Default
		Disable	PTM__DIS	Not used for TK-762G

10-1. Flow Chart

11. Memory Reset Mode (TK-760G only)

You can clear all settings you made in self programming mode, or you can return to the original display.

- Press [SCN] while "SELF" is displayed will change the display to "CANCEL".
- Press [CH▲/▼] to change the display between "CANCEL" and "READY".
- When "READY" is displayed, pressing [SCN] will set all data to default, and "CLEAR" will appear on the display. Press [SCN] again to display "SELF".
- When "CANCEL" is displayed, pressing [SCN] will cancel the reset, and "SELF" will be displayed.

INSTALLATION

1. Accessory Connection Cable (KCT-19 : Option)

The KCT-19 is an accessory connection cable for connecting external equipment. The connector has 15 pins and the necessary signal lines are selected for use.

1-1. Installing the KCT-19 in the transceiver

1. Remove the upper half of the transceiver case, and lift the DC cord bushing (1) from the chassis.
2. Remove the pad as shown in Figure 1 (2).
3. Insert the KCT-19 cable (3) into the chassis (4).
The wire harness band (5) must be inside the chassis.
4. Replace the DC cord bushing (6).
5. Connect the KCT-19 to the TX-RX unit (A/2) as shown in Figure 2 (7).
6. Connect the KCT-19 to the external accessory by inserting the crimp terminal (8) into the square plug (9), both of which are supplied with the KCT-19.

Fig. 1

Fig. 2

*2 : Emergency mode

3. Ignition Sense Cable (KCT-18 : Option)

The KCT-18 is an optional cable for enabling the ignition function. The ignition function lets you turn the power to the transceiver on and off with the car ignition key.

If you use the Horn Alert function or the Manual Relay function, you can turn the function off while driving with the ignition key.

3-1. Connecting the KCT-18 to the Transceiver

1. Install the KCT-19 in the transceiver. (See the KCT-19 section.)
2. Insert the KCT-18 lead terminal (2) into pin 3 of the square plug (1) supplied with the KCT-19, then insert the square plug into the KCT-19 connector (3).

Fig. 3

3-2. Modifying the Transceiver

Modify the transceiver as follows to turn the power or the Horn Alert or Manual Relay function on and off with the ignition key.

1. Remove the lower half of the transceiver case.
2. Set jumper resistors (0Ω) R134 and R135 of the TX-RX unit (A/2) as shown in Table 1.

Fig. 4

INSTALLATION

Operation when KCT-18 is connected	R134	R135	
	Enable	Enable	← KCT-18 cannot be connected
Power on/off and Horn Alert or AUX-A on/off	Disable	Enable	
Horn Alert or AUX-A on/off	Enable	Disable	← Power cannot be turned on
	Disable	Disable	

Table 1 R134 and R135 setup chart

4. PA/HA Unit (KAP-1 : Option)

4-1. Installing the KAP-1 in the Transceiver

The Horn Alert (max. 2A drive) and Public Address functions are enabled by inserting the KAP-1 W1 (3P; white/black/red) into CN3 on the TX-RX unit, inserting W2 (3P; green) into CN7 on the TX-RX unit, and connecting the KCT-19 (option) to CN2 and CN3 of the KAP-1.

• Installation procedure

1. Open the upper case of the transceiver.
2. Insert the two cables (❶) with connectors from the KAP-1 switch unit into the connectors on the transceiver.
3. Secure the switch unit board to the chassis with a screw (❸). The notch (❷) in the board must be placed at the front left side.
4. Attach the cushion on the top of the KAP-1 switch unit.

Fig. 5

4-2. Modifying the Transceiver

• Horn alert

The signal from pin 4 of IC9 on the TX-RX unit turns Q5 and Q1 on and off and drives KAP-1 HA relay K2 to drive the horn with a maximum of 2A.

The default output is HR1. The relay open output can be obtained between HR1 and HR2 by removing R1 in the KAP-1.

	R1	Output form
HR1 (Default)	Enable	
HR2	Disable	

Fig. 6 KAP-1 foil side view

• Public address

The signal from pin 13 of IC9 on the TX-RX unit drives PA relay K1 in the KAP-1 and switches the audio power amplifier output between the external PA system (through KCT-19) and internal and external speakers.

To use the PA function, R153 on the TX-RX unit must be removed.

	R153
Use the PA function	Disable
Do not use the PA function	Enable

Fig. 7

INSTALLATION

4-3. Others

If the PA and HR2 are not necessary and the speaker output is output to an external unit through the KCT-19, connect the KCT-19 C connector to CN8 on the TX-RX unit.

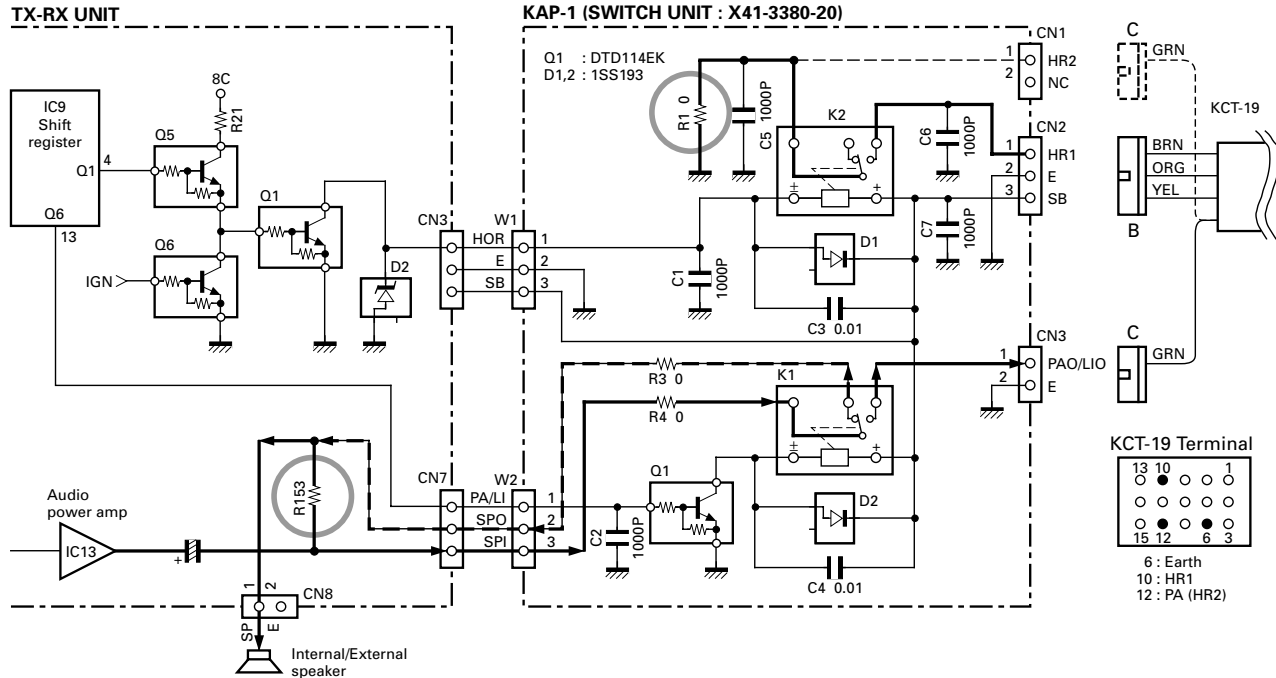

Fig. 8

5. Emergency Mode

5-1. Transceiver Modification Procedure

• Install the foot switch

Install the foot switch through the KCT-19 and KCT-18. When the switch is treaded on, the radio enters the emergency mode.

• Change the power switch circuit

TX-RX unit (B/2) : Control section
 \$R705 : Attach (R92-1252-05, 0Ω)

TX-RX unit (A/2) : RF section
 R142 : Remove (RK73GB1J473J, 47kΩ)

Once the transceiver is modified, it cannot be turned on and off with the power switch. The power switch turns the LCD backlight and display on and off. (The power is switched on and off by IGNITION SENSE.)

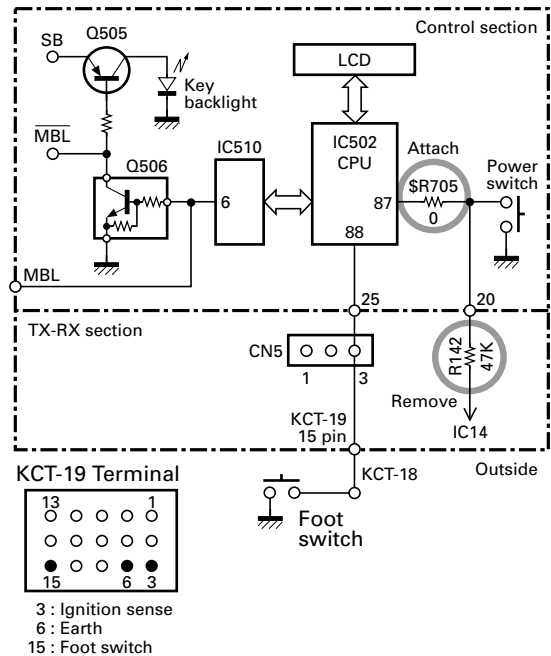

Fig. 9

INSTALLATION

Fig. 10

6. Fitting the Control Panel Upside Down

The TK-760G/762G control panel can be fitted upside down, so the transceiver can be mounted with its internal speaker (in the upper half of the case) facing down in your car.

1. Remove the control panel and the TX-RX unit (B/2) control section. (Fig. 11)

Fig. 11

2. Fold the flat cable (1) in the opposite direction (2).
3. Rotate the control section (3) 180 degrees (4).
4. Insert the flat cable into the control section connector, CN501 (5).
5. Mount the control section on the transceiver (6).

Fig. 12

INSTALLATION

- Rotate the control panel 180 degrees and mount it on the transceiver. Refit the two halves of the case to complete installation. (Fig. 13)

Fig. 13

7. External Speaker

7-1. KES-3 : Option

The KES-3 is an external speaker for the 3.5-mm-diameter speaker jack.

• Connection procedure

- Connect the KES-3 to the 3.5-mm-diameter speaker jack on the rear of the transceiver.

Fig. 14

7-2. KES-4 : Option

The KES-4 is an external speaker used with the accessory connection cable.

• Connection procedure

- Install the KCT-19 in the transceiver. (See the KCT-19 section.)
- Insert the crimp terminal into the square plug supplied with the KCT-19.
- Connect CN8 of the transceiver to connector C of the KCT-19 instead of to the internal speaker connector.

Fig. 15

CIRCUIT DESCRIPTION

Frequency Configuration

The receiver utilizes double conversion. The first IF is 49.95MHz and the second IF is 450kHz. The first local oscillator signal is supplied from the PLL circuit.

The PLL circuit in the transmitter generates the necessary frequencies. Figure 1 shows the frequencies.

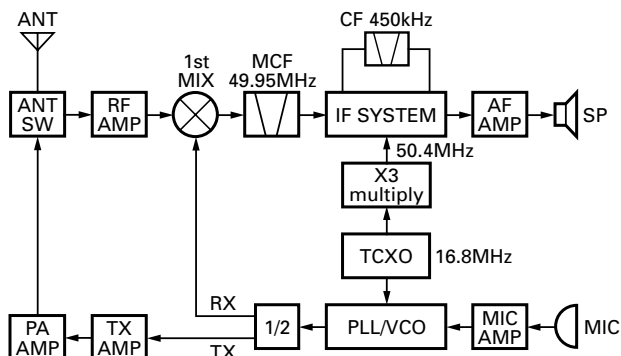

Fig. 1 Frequency configuration

Receiver System

The receiver is double conversion superheterodyne. The frequency configuration is shown in Figure 1.

■ Front-end RF Amplifier

An incoming signal from the antenna is applied to an RF amplifier (Q27) after passing through a transmit/receive switch circuit (D33 and D34 are off) and a band pass filter (L18). After the signal is amplified (Q27), the signal is filtered through a band pass filter (L11, L13 and L15) to eliminate unwanted signals before it is passed to the first mixer. Band pass filters (L18, L11, L13 and L15) have varactor diodes (D30, D31, D18, D23 and D28).

The voltage of these diodes are controlled by to track the CPU (IC502) center frequency of the band pass filter. (See Fig. 2)

■ First Mixer

The signal from the RF amplifier is heterodyned with the first local oscillator signal from the PLL frequency synthesizer circuit at the first mixer (Q15) to create a 49.95MHz first intermediate frequency (1st IF) signal. The first IF signal is then fed through one pair of monolithic crystal filters (MCF : XF1) to further remove spurious signals.

■ IF Amplifier

The first IF signal is amplified by Q13, and the enters IC5 (FM processing IC). The signal is heterodyned again with a second local oscillator signal within IC5 to create a 450kHz second IF signal. The second IF signal is then fed through a 450kHz ceramic filter (CF2) to further eliminate unwanted signals before it is amplified and FM detected in IC5.

Item	Rating
Nominal center frequency	49.95MHz
Pass bandwidth	±5.0kHz or more at 3dB
35dB stop bandwidth	±20.0kHz or less
Ripple	1.0dB or less
Insertion loss	5.0dB or less
Guaranteed attenuation	80dB or more at fo±1MHz
	Spurious : 40dB or more within fo±1MHz
Terminal impedance	350Ω±5% / 5.5pF±0.5pF

Table 1 Crystal filter (L71-0551-25) : XF1

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±4.5kHz or more
50dB bandwidth	±10.0kHz or less
Ripple	2.0dB or less
Insertion loss	6.0dB or less
Guaranteed attenuation	55.0dB or more within fo±100kHz
Terminal impedance	2.0kΩ

Table 2 Ceramic filter (L71-0959-05) : CF2 (NE)

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±6.0kHz or more
50dB bandwidth	±12.5kHz or less

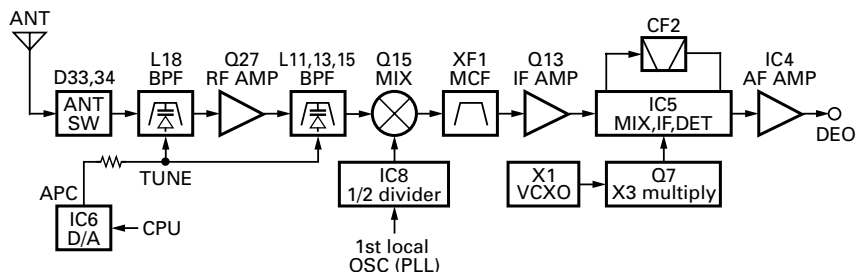

Fig. 2 Receiver system

CIRCUIT DESCRIPTION

■ AF Signal System

The detection signal (DEO) from the TX-RX unit goes to the audio processor (IC508) of the control unit. The signal passes through a filter in the audio processor to adjust the gain, and is output to IC507. IC507 sums the AF signal and the DTMF signal, BEEP signal and returns the resulting signal to the TX-RX unit. The signal (AFO) sent to the TX-RX unit is input to the D/A converter (IC6). The AFO output level is adjusted by the D/A converter. The signal output from the D/A converter is input to the audio power amplifier (IC13). The AF signal from IC13 switches between the internal speaker and speaker jack (J1) output.

Fig. 3 AF signal system

■ Squelch Circuit

The detection output from the FM IF IC (IC5) passes through a band-pass filter and a noise amplifier (Q10) in the control unit to detect noise. A voltage is applied to the CPU (IC502). The CPU controls squelch according to the voltage (ASQ) level. The signal from the RSSI pin of IC5 is monitored. The electric field strength of the receive signal can be known before the ASQ voltage is input to the CPU, and the scan stop speed is improved.

Fig. 4 Squelch circuit

■ PLL Frequency Synthesizer

The PLL circuit generates the first local oscillator signal for reception and the RF signal for transmission.

■ PLL

The frequency step of the PLL circuit is 5 or 6.25kHz. A 16.8MHz reference oscillator signal is divided at IC3 by a fixed counter to produce the 5 or 6.25kHz reference frequency. The voltage controlled oscillator (VCO) output signal is buffer amplified by Q106 (Sub-unit), then divided in IC3 by a dual-module programmable counter. The divided signal is compared in phase with the 5 or 6.25kHz reference signal in the phase comparator in IC3. The output signal from the phase comparator is filtered through a low-pass filter and passed to the VCO to control the oscillator frequency. (See Fig. 5)

■ VCO

The TK-760G/762G has VCO in a Sub-unit (A1) housed in a solid shielded case and connected to the TX-RX unit through CN101.

The operating frequency is generated by Q103 in transmit mode and Q101 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator, to the varactor diodes (D102 and D104 in transmit mode and D101 and D103 in receive mode). The RX (ST) pin is set low in receive mode causing Q102 to turn Q103 off, and turn Q101 on. The RX (ST) pin is set low in transmit mode. The outputs from Q101 and Q103 are amplified by Q106 and sent to the buffer amplifiers.

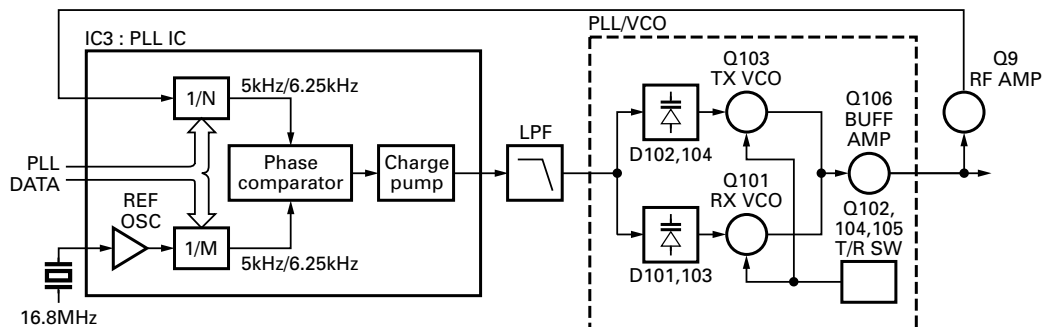

Fig. 5 PLL circuit

CIRCUIT DESCRIPTION

■ Unlock Circuit

During reception, the 8RC signal goes high, the 8TC signal goes low, and Q16 turns on. Q18 turns on and a voltage is applied to the collector (8R). During transmission, the 8RC signal goes low, the 8TC signal goes high and Q29 turns on. Q28 turns on and a voltage is applied to 8T.

The CPU in the control unit monitors the PLL (IC3) LD signal directly. When the PLL is unlocked during transmission, the PLL LD signal goes low. The CPU detects this signal and makes the 8TC signal low. When the 8TC signal goes low, no voltage is applied to 8T, and no signal is transmitted.

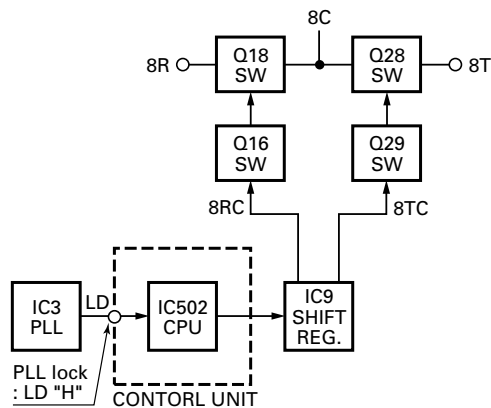

Fig. 6 Unlock circuit

Transmitter System

■ Outline

The transmitter circuit produces and amplifies the desired frequency directly. It FM-modulates the carrier signal by means of a varicap diode.

■ Power Amplifier Circuit

The transmit output signal from the VCO is amplified to a specified level of the power module (IC400) by the drive block (Q22 and Q25). The amplified signal passes through the transmission/reception selection diode (D16) and goes to a low-pass filter. The low-pass filter removes unwanted high-frequency harmonic components, and the resulting signal is sent to the antenna terminal.

■ APC Circuit

The automatic transmission power control (APC) circuit detects part of a power module output with a diode (D35, D36) and applies a voltage to IC15. IC15 compares the APC control voltage (PC) generated by the D/A converter (IC6) and DC amplifier (IC7) with the detection output voltage to control Q31 and Q32, generates DB voltage from B voltage, and stabilizes transmission output.

The APC circuit is configured to protect over current of the power module due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

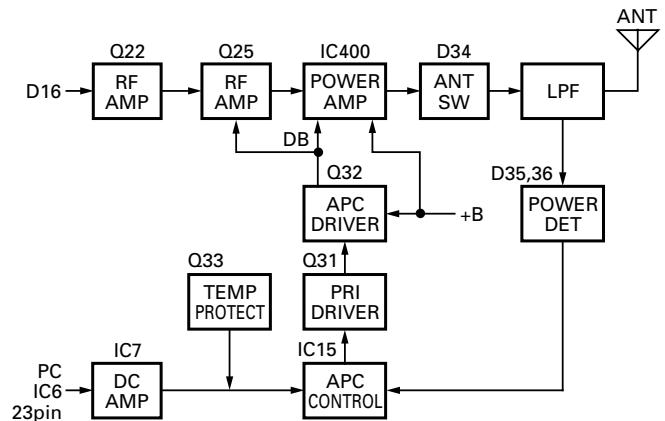

Fig. 8 APC circuit

Fig. 7 Transmitter system

CIRCUIT DESCRIPTION

Control Circuit

The CPU carries out the following tasks:

- 1) Controls the shift register (IC9, IC510) AF MUTE, WIDE/NARROW, T/R KEY outputs.
- 2) Adjusts the AF signal level of the audio processor (IC508) and turns the filter select compounder on or off.
- 3) Controls the DTMF decoder (IC511).
- 4) Controls the LCD assembly display data.
- 5) Controls the PLL (IC3).
- 6) Controls the D/A converter (IC6) and adjusts the volume, modulation and transmission power.

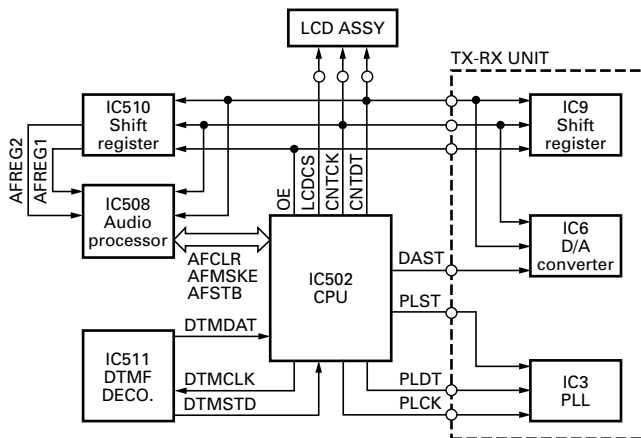

Fig. 9 Control circuit

Memory Circuit

The transceiver has a 2M-bit (256k x 8) flash ROM (IC501) and an 8k-bit EEPROM (IC505). The flash ROM contains firmware programs, data and user data which is programmed with the FPU. The EEPROM contains adjustment data. The CPU (IC502) controls the flash ROM through an external address bus and an external data bus. The CPU controls the EEPROM through two serial data lines.

Fig. 10 Memory circuit

Display Circuit

The CPU (IC502) controls the shift register (IC510) and display LEDs. When the LED1 line goes high when the transceiver is busy, Q508 turns on and the green LED on D521 lights. In transmit mode, the LED0 line goes high, Q504 turns on and the red light lights. Backlighting LEDs for the key operation unit (D509~D514) and LCD are provided.

When the MBL line goes high, Q506 turns on, then Q505 turns on, and the key illumination LED lights. A voltage is applied to the MBL line to turn on the LCD backlight.

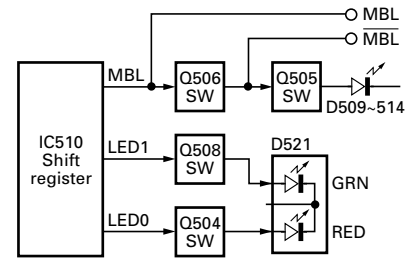

Fig. 11 Display circuit

Key Matrix Circuit

The TK-760G/762G front panel has function keys. Each of them is connected to a cross point of a matrix of the KIN0 to KOUT2 ports of the microprocessor. The KOUT0 to KOUT2 ports are always high, while the KIN0 to KIN2 ports are always low.

The microprocessor monitors the status of the KIN0 to KOUT2 ports. If the state of one of the ports changes, the microprocessor assumes that the key at the matrix point corresponding to that port has been pressed.

Fig. 12 Key matrix circuit

Encode

The QT and DQT signals are output from TO of the CPU (IC502) and summed with the external pin DI line by the summing amplifier (IC2) and the resulting signal goes to the D/A converter (IC6) of the TX-RX unit. The DTMF and 2-TONE signals are output from DTMF of the CPU and goes to the audio processor (IC508). The signal is summed with a MIC signal by the audio processor (IC508), and the resulting signal passes through an analog switch (IC509) and goes to the TX-RX unit (MO).

The D/A converter (IC6) adjusts the MO level and the balance between the MO and TO levels. Part of a TO signal is summed with MO and the resulting signal goes to the MD pin of the VCO. This signal is applied to a varicap diode in the VCO for direct FM modulation.

Fig. 13 Encode

CIRCUIT DESCRIPTION

■ Decode

• QT/DQT/DTMF

The signal (DEO) detected by the TX-RX unit passes through two low-pass filters of IC513, goes to TOI of the CPU (IC502) to decode QT, DQT. The DTMF signal is decoded by a dedicated IC (IC511) and the resulting signal is sent to the CPU (IC502) as serial data.

• 2-tone, 5-tone

The detected signal passes through audio processor (IC508) RX OUT. Then it is filtered through IC514 2-stage low-pass filtered to enter CPU (IC502) to decode 2-tone and 5-tone signalling.

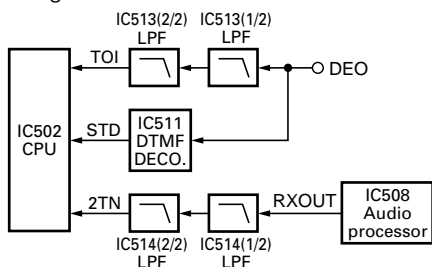

Fig. 14 Decode

■ D/A Converter

The D/A converter (IC6) is used to adjust TONE and MO modulation, AF volume, TV voltage, FC reference voltage, and PC POWER CONTROL voltage level.

Adjustment values are sent from the CPU as serial data. The D/A converter has a resolution of 256 and the following relationship is valid:

$$D/A \text{ output} = (V_{in} - V_{DAref}) / 256 \times n + V_{DAref}$$

V_{in} : Analog input

V_{DAref} : D/A reference voltage

n : Serial data value from the microprocessor (CPU)

■ Horn Control

The horn switch, consisting of Q1, Q5, and Q6, controls the horn relay. It is supplied by the dealer to provide the external horn alert function.

Q6 disables horn alert, turning on when its base is high, to inhibit the function. Normally, the output from IC9 is low, and Q5 is off; the base of Q1 is about 0V and Q1 is off. When horn alert is enabled, the output from IC9 goes high and Q5 turns on. The base current flows through R21 to Q1 to turn Q1 on. Q1 can sink a maximum of 100mA. If the optional KAP-1 is used, it can drive up to 2A.

Fig. 15 Horn control circuit

■ PA Switch

If the optional KAP-1 is used (see the separate section for details), the PA (Public Address) function becomes available. In this case, the signal flow changes as follows;

• PA off

For TX, the switch which is between pins 10 and 11 of IC509 closes. The audio signal from the microphone passes through IC509 and IC6 and modulates the VCO.

For RX, the switch which is between pins 3 and 4 of IC509 closes. The detected signal passes through IC509, IC508, IC507, IC6 and IC13 and is then output to the speaker.

• PA on

Since the switch which is between pins 10 and 11 of IC509 is open, the switch which is between pins 3 and 4 of IC509 is open, and the switch which is between pins 1 and 2 of IC509 is closed, the audio signal from the microphone passes through IC508, IC507 and IC6, and then goes to IC13. The signal is output to the external PA system through the PA relay in KAP-1.

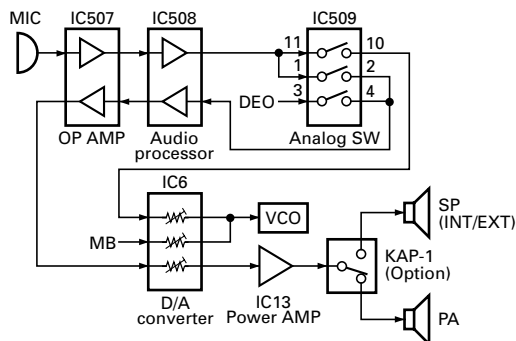

Fig. 16 PA switch

Power Supply Circuit

When the POWER switch on the control unit is pressed, the PSW signal goes low. This signal is inverted by Q26 and sent to a flip-flop IC (IC14). This IC outputs a control signal when the PSW goes low. When the power turns on, pin 1 of IC14 outputs a low signal and Q20 turns on. The base of Q19 goes high, Q19 turns on, SB SW (Q23) turns on and power (SB) is supplied to the set.

This circuit has an overvoltage protection circuit. If a DC voltage of 20 V or higher is applied to the power cable, D21 turns on and a voltage is applied to the base of Q21. This voltage turns Q21 on and turns Q19 and SBSW off.

PACKING

ADJUSTMENT

Test Mode (TK-760G Only)

■ Test Mode Operating Features

This transceiver has a test mode. **To enter test mode, press [SCN] key and turn power on. Hold [SCN] key until test channel No. and test signalling No. appears on LCD.** Test mode can be inhibited by programming. To exit test mode, switch the power on again. The following functions are available in test mode.

• Controls

[PTT]	Used when making a transmission.
[MON]	Monitor on and off.
[SCN]	Sets to the tuning mode.
[A]	Function on.
[D/A]	RF power high and low.
[▼]	Changes signalling.
[▲]	Changes wide and narrow*
[CH▲/▼]	Changes channel.
[Volume▲/▼]	Volume up/down.

* E type is Wide 5k/4k, NE type not used

• LCD indicator

"SCN"	Unused.
"AUX"	Lights at RF power low.
"MON"	Lights at monitor on.

• LED indicator

Red LED	Lights during transmission.
Green LED	Lights when there is a carrier.

■ Frequency and Signalling

The set has been adjusted for the frequencies shown in the following table. When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

• Frequency (MHz)

Channel No.	TK-760G(E/NE)/762G(E/NE)	
	RX	TX
1 (Center)	160.050	160.100
2 (Low)	146.050	146.100
3 (High)	173.950	173.900
4	160.000	160.000
5	160.200	160.200
6	160.400	160.400
7~16	-	-

• Signalling

Signalling No.	RX	TX
1	None	None
2	None	100Hz square
3	QT 67.0Hz	QT 67.0Hz
4	QT 151.4Hz	QT 151.4Hz
5	QT 210.7Hz	QT 210.7Hz
6	QT 250.3Hz	QT 250.3Hz
7	DQT D023N	DQT D023N
8	DQT D754I	DQT D754I
9	DTMF DEC, (159D)	DTMF ENC, (159D)
10	None	DTMF tone (9)
11	2-tone 321.7/928.1Hz	2-tone 321.7/928.1Hz
12	Single tone 1200Hz	Single tone 1200Hz
13	5-tone DEC. (EIA#12345)	5-tonr ENC. (#23456)

• Preparations for tuning the transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a 4Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

• Transceiver tuning

(To place transceiver in tuning mode)

Channel appears on LCD. Set channel according to tuning requirements.

LCD display (Test mode)

Press [SCN], now in tuning mode. Use [D/A] button to write tuning data through tuning modes, and [CH▲/▼] to adjust tuning requirements (1 to 256 appears on LCD).

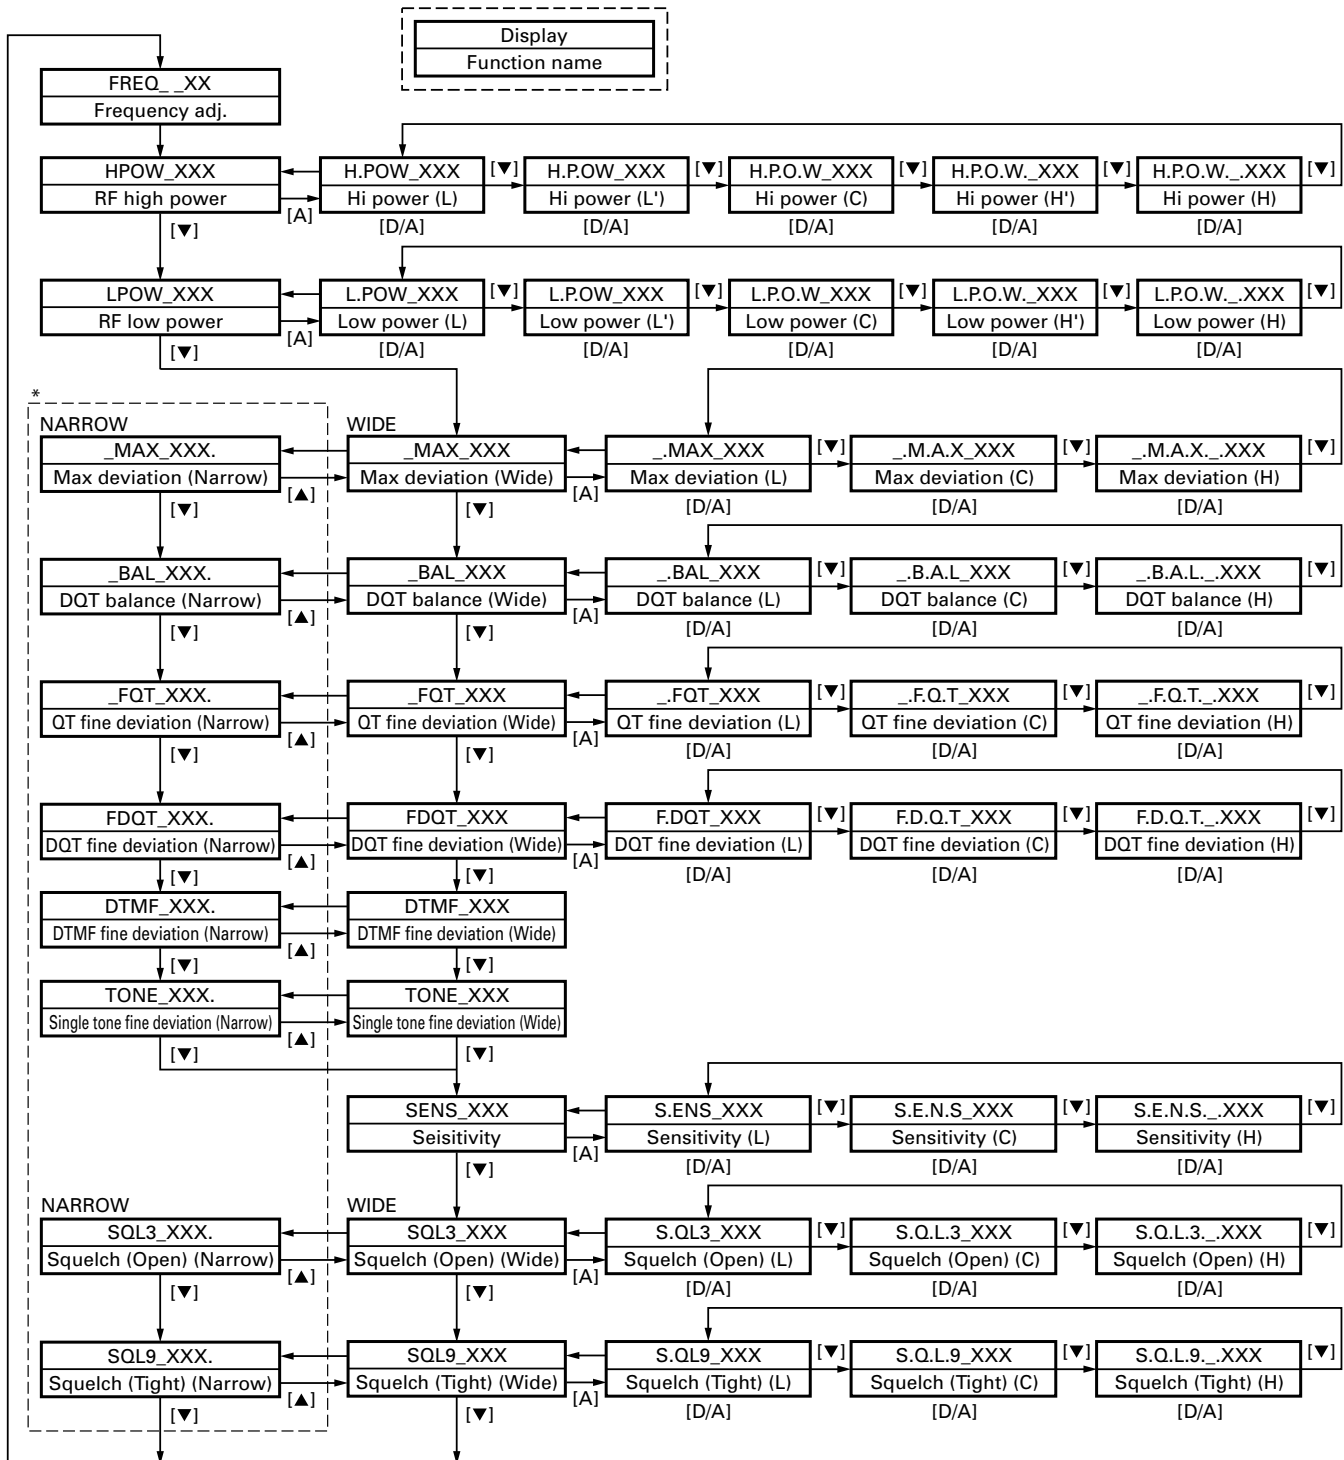

Use [▼] button to select the adjustment item through tuning modes. Use [A] button to adjust 3-point or 5-point tuning, and use [▲] button to switch between wide/narrow.

LCD display (Tuning mode)

ADJUSTMENT

■ Tuning Mode

* E type is Wide 4k, NE type not used.

ADJUSTMENT

Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	136 to 174MHz Frequency modulation and external modulation -127dBm/0.1 μ V to greater than -7dBm/100mV
2. Power Meter	Input Impedance Operation Frequency Measurement Capability	50 Ω 136 to 174MHz or more Vicinity of 100W
3. Deviation Meter	Frequency Range	136 to 174MHz
4. Digital Volt Meter (DVM)	Measuring Range Accuracy	1 to 20V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. Ammeter		20A
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 10V
9. Audio Generator (AG)	Frequency Range Output	20Hz to 20kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 4 Ω Dummy Load		Approx. 4 Ω , 10W or more
12. Regulated Power Supply		13.2V, approx. 20A (adjustable from 9 to 20V) Useful if ammeter requipped

Tuning cable (E30-3383-05)

Adapter cable (E30-3383-05) is required for injecting an audio if PC tuning is used.
See "PC Mode" section for the connection.

Test cable for microphone input (E30-3360-08)

MIC connector (Front view)

8 : CM

TK-760G/(N)/762G/(N)

ADJUSTMENT

Adjustment Location

■ Switch (TK-760G)

■ Note

• Flash memory

The firmware program (User mode, Test mode, Tuning mode, etc.) and the data programmed by the FPU (KPG-67D) for the flash memory, is stored in memory. When parts are changed, program the data again.

• EEPROM

The tuning data (Deviation, Squelch, etc.) for the EEPROM, is stored in memory. When parts are changed, readjust the transceiver.

■ Adjustment Point

■ Repair Jig

• Chassis

Use jig (Part No. : A10-4010-02) for repairing the TK-760G/762G. The jig facilitates the voltage check when the voltage on the component side TX-RX unit is checked during repairs.

• Extension cable

Part No. : E30-3404-05

ADJUSTMENT

Common Section

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
1. PLL lock voltage RX	1) Set test mode CH : CH3 - Sig1	DVM Power meter F. conter	TX-RX (A/2)	CV	PLL	TC106	7.5V	±0.1V
	TX					2) PTT : ON (Transmit)	TC109	
	RX	3) CH : CH2 - Sig1 AUX : ON (Talk-around mode)				Check	1.0V or more	
	TX	4) PTT : ON (Transmit)					0.5V or more	

Note

- To adjust TK-762G, use KPG-67D FPU, otherwise you cannot tune this transceiver from the front panel.
- TK-760G NE and TK-762G NE are "Narrow" band models. TK-760G E and TK-762G E are "Wide (Wide 5k) & Semi wide (Wide 4k)" band models. Refer to the relative adjustment value in the table.

Receiver Section

2	UL	Lock detect.
3	PLST	Strobe signal for IC3 (PLL IC).
4	PLDT	Serial data for IC3 (PLL IC).
5	PLCK	Clock pulse for IC3 (PLL IC).
6	RSSI	Receive signal strength indicator.
7	ASQ	Analog squelch.
8	TO	Transmit sub-tone signal output.
9	SFTST	Strobe signal for IC9 (Shift register).
10	DAST	Strobe signal for IC6 (Shift register).
11	CNTDT	Control serial data for IC6.
12	CNTCK	Control clock pulse for IC6.
13	W/N	Not used.
14	CTO	Received sub-tone signal.
15	DTMFIO	DTMF signal.
16	MO	Modulation signal.
17	AFO	Receiver audio signal.
18	SB	Switched B.
19	SB	Switched B.
20	PSW	Power switch.
21	AUX3	Optional unit control signal.
22	AUX1	Optional unit control signal.
23	AUX4	Optional unit control signal.
24	AUX2	Optional unit control signal.
25	EMG	Foot switch input signal.
26	8C	DC 8V.
27	MM	MIC mute.
28	MI	External MIC input signal.
29	OE	Output enable for IC9.
30	ALT	Alert tone signal.
31	DEO	Receiver detector output.
32	MII	Transmit audio signal input.
33	MIO	Transmit audio signal output.
34	GND	Ground.

*1 : MDT mode

*2 : Emergency mode

CN3 (TX-RX Unit)

Pin No.	Name	Function
1	HOR	Horn alert/call output.
2	E	Ground.
3	SB	Switched B+, DC 13.2V output, Maximum 1A.

CN4 (TX-RX Unit)

Pin No.	Name	Function
1	DEO	Receiver detector output. Level : 0.5Vrms (Atandard modulation)
2	DTC	Data channel control/External hook input.
3	IGN	Ignition sense input.
4	DI	Data modulation input.
5	ME	External microphone ground.
6	MI	EXternal microphone input.
7	PTT	External PTT input, active low.
8	SQ	Squelch detect output.

CN5 (TX-RX Unit)

Pin No.	Name	Function
1	AM	Speaker mute input, active high.
2	MM	MIC mute input, active high
3	EMG	EMG : Foot switch input, active low. *2

CN7 (TX-RX Unit)

Pin No.	Name	Function
1	PA/LI	Relay for PA function KAP-1 control. "H" : PA/LI on, "L" : PA/LI off
2	SPO	Audio signal output to KAP-1
3	SPI	Audio signal inpt from KAP-1

CN8 (TX-RX Unit)

Pin No.	Name	Function
1	SP	Audio signal output to internal/external speaker.
2	E	Ground

J501 (Control Unit)

Pin No.	Name	Function
1	MBL	MIC backlight control.
2	PSB	13.2V.
3	GND	Ground.
4	PTT/TXD	PTT.
5	ME	MIC ground.
6	MIC	MIC signal input.
7	HOOK/RXD	Hook detection
8	CM	MIC data detection.

CN101 (PLL/VCO) ↔ TX-RX Unit

Pin No.	Name	Function
1	CV	Control voltage input.
2	MD	Modulation input.
3	8CL	8V input.
4	E	Ground.
5	HT	Signal output.
6	RX (ST)	Switched transmit input. H : Transmit

SPECIFICATIONS**GENERAL**

Frequency Range	146 to 174MHz		
Number of Channels	TK-762G : Maximum 8 channels	TK-760G : Maximum 128 channels	
Number of Groups	TK-760G : Maximum 128 groups		
Channel Spacing			
TK-760G/TK-762G	Wide : 25kHz	Semi wide : 20kHz	
TK-760G(N)/762G(N)	Narrow : 12.5kHz		
PLL Channel Stepping	5kHz, 6.25kHz		
Modulation	± 5 kHz at 25kHz	± 4 kHz at 20kHz	± 2.5 kHz at 12.5kHz
Operating Voltage	13.2V DC $\pm 15\%$		
Current Drain	Less than 0.4A on standby		
	Less than 1.0A on receive		
	Less than 8.0A on transmit		
Operating Temperature Range	-30°C to $+60^{\circ}\text{C}$		
Dimensions & Weight	140 W x 40 H x 145 D mm , 940g		
Channel Frequency Spread	28MHz		

RECEIVER (Measurements made per ETS standard)

Sensitivity (12dB SINAD) (EIA)	Wide : 0.25 μV	Semi wide : 0.25 μV	Narrow : 0.32 μV
Adjacent Channel Selectivity	Wide : 70dB	Semi wide : 70dB	Narrow : 60dB
Intermodulation	65dB		
Spurious Responce Rejection	70dB		
Audio Power Output	4.0W at 4 Ω , with less than 10% distortion		
Frequency Stability	± 2.5 ppm		

TRANSMITTER (Measurements made per ETS standard)

RF Power Output	5 to 25W		
Spurious Response	70dB		
FM Noise (EIA)	Wide : 50dB	Semi wide : 50dB	Narrow : 45dB
Modulation Distortion	Less than 3% at 1kHz		
Frequency Stability	± 2.5 ppm		

TK-760G/(N)/762G/(N)
