Base Stations Product Update

April 2006

Date	3rd April 2006
From	Margaret Grant – Infrastructure Product Manager

TB8100 Multi-Reciter

In another exciting development, the TB8100 will be available in a multi-reciter format from the end of April 2006. Up to seven reciters can be fitted in a rack (or up to five plus a power management unit) – ideal for voting systems, multi-channel TaitNet QS² Simulcast systems and other systems requiring independent monitoring and recording.

The Configurator will be updated with a multi-reciter option. The S8 number can handle a maximum of two reciters in the subrack. You will have to order the additional reciters as individual items on your purchase order, using a CP to have them installed in the multi-reciter subrack.

Please contact me at margaret.grant@tait.co.nz or +64 (0)3 357 1562 with any product queries.
