

Thank you for purchasing the matching enclosure for your VEC-1680K *Vacuum Tube Audio Preamplifier Kit*. The matching enclosure is an all metal cover, with mounting screws, to protect your tube.

To install your VEC-1680KC matching enclosure follow these instructions:

1. Remove all debris and oil from the enclosure. You can do this with a piece of cloth and alcohol.
2. Find the four (4) self-tapping (#4 x 1/4", type B) screws.
3. Align the enclosure with the four pilot holes.
4. With a philips head type screw drive, secure the enclosure using the self-tapping screws. The screws should be snug-do not over tighten.
