

Technical Note TN-650

T2040 Factory Production Software Upgrades

29th November 2000

Applicability

This Technical Note only applies to the T2040 radios that are currently being produced by the T2000 production line.

1. T2040 Programming Software.

Details

The last FULL release T2040 programming software to be used in production was V2.57. This software has now been surpassed by **V2.72 T2040 Programming Software**.

The Main changes to note are:

- **Supports 8 digit serial numbering.**
- **Will program radios with the SST flash device.**
- **User Group Select feature added.**
- **Various new frequency band additions.**
- **Various bug fixes.**

The new programming software will be required to program radios starting from serial number **17046008** onwards.

Please Note:

- Kan Ban stock will not be upgraded unless otherwise requested by the CSO.
- The programming software is available to download off the Technical Issues Database under the software section.

2. T2040 Radio Firmware

Details

The last FULL release T2040 Radio Firmware to be used in production was V5.33. This software has now been surpassed by **V5.58 T2040 Radio Firmware**.

The Main changes to note are:

- **SST / ST Flash capable**
- **E1HC11 micro compatible**
- **Group Select**
- **Control channel and traffic channel display**
- **RSSI signal level display**
- **Works with new option boards (i.e T2000-A45XX)**
- **Various bug fixes and enhancements**

The new T2040 Radio firmware will be placed in radios starting from serial number **17046008** onwards.

Please Note:

- Kan Ban stock will not be upgraded unless otherwise requested by the CSO.
- The Radio firmware is available to download off the Technical Issues Database under the software section.

CSO's

Please inform all logistics, sales and technical staff and dealers of these changes.
