

Technical Note TN-607

Introduction of New Feature on Hands Free PCB.

10 February 2000

Applicability

This Technical Note only applies to the T2000 radio product range.

1. Introduction.

Information

The previous hands free PCB (IPN 225-01210-03) limited other possible features that could be used on the radio unit to which the board was fitted.

The new T2000-A50/A51 PCB (**225-01210-04**) has been modified to allow the single port MAP27 (T2000-A66 for trunked units) and the conventional modem (T2000-A70 for T201X units) to be fitted to the radio also. In the past, the hands-free PCB didn't allow for any other options board to be used in conjunction with it.

The change simply allows access to the D-range. There are four pins available for use.

This change took place on the **1st of February.**

CSO's: Please pass this information onto all relevant personnel and dealers.
