

Technical Note TN-591
Tait Orca Programming Software
RAM Requirements

31 August 1999

Applicability

This technical note applies to Tait Orca programming software user manuals.

NB This technical note is to provide the user with updated information on the amount of RAM required to run the Tait Orca programming software. This does not provide a solution to Technical Issue #647 currently under investigation.

Explanation

The current release of programming software user manuals state that one of the minimum hardware requirements is to have 2MB of RAM. The actual minimum requirement from the computer hardware is for it to have 4MB of RAM. Changes have been implemented to update this information in the next printing of the manuals.

Note to CSOs

Please pass this information to all internal sales and technical staff, and to all dealers.
