Technical Note TN-653  
**Programming a T1810 Channel  
Controller**

13 December 2000

---

**Applicability**

Programming T1810 Channel Controllers.

---

## 1. Introduction

<b>Problem</b>	<p>The T1810 controller is a low cost single site MPT1327 radio trunking controller. It is programmed from a DOS based programming utility</p> <p>The procedure for down loading and programming the Channel Module (T1810-01-0000) and Line Module (T1810-03-0000) as defined in the Operation and Installation Guide (M1810-00-805) is not clear.</p>
<b>Solution</b>	<p>Please follow the new instructions for programming modules as follows:</p>

### Page 3-9 : Procedure for Programming Channel Modules

<b>3</b>	Select option <b>2 Read Rack</b> to identify modules for programming: <b>Note: This does not down load any data from the modules.</b>
<b>4</b>	If the modules are to be programmed identically (recommended), select option <b>7 Read Module</b> and select <b>any</b> module in order to download the data before changing parameters to be programmed.
<b>4.a</b>	If the modules are to be programmed differently, select option <b>7 Read Module</b> to select the individual module required in order to download that module's data before changing any parameters to be programmed.

## Page 3-16: Procedure for Programming Line Modules

<b>3</b>	Select option <b>2 Read Rack</b> to identify modules for programming: <b>Note: This does not download any data from the modules.</b>
<b>4</b>	If the modules are to be programmed identically (recommended), select option <b>7 Read Module</b> and select <b>any</b> module in order to download the data before changing parameters to be programmed.
<b>4.a</b>	If the modules are to be programmed differently, select option <b>7 Read Module</b> to select the individual module required in order to download that module's data before changing any parameters to be programmed.
