TECHNICAL NOTE

Technical Note TN-NSC084 EXTERNAL ALERT OPERATION ON T201X RADIOS

18 May 2004

This Technical Note applies to the External Alert operation on T201X Radios, when using the T2000 Windows Conventional Programming Software V2.64.0.

It has been found that when the AUX key is set to "External" using the Windows programming software, that it does not enable the External Alert feature of the radio.

The correct operation of AUX key when configured to "External" is that the AUX LED should latch on when the auxiliary key is pressed, to indicate that External Alert mode is active.

The T2000 Windows programming software does not program the radio correctly. It sets the AUX key to "Momentary" instead of "External".

Tait recommend that if you require control of the External Alert via the AUX key that you use the DOS T201X programming software V1.40 to program this option. As programming the radio with the DOS Programming Software enables operation of the External Alert feature correctly.

If you require any clarification or further information please contact the National Support Centre on 0800 MOBILE (0800 662453).
