# 9323/9360/9780 HF SSB Transceiver software upgrade

---

## Introduction

This service bulletin affects users of a single site, remote controlled system with software versions 3.08 to 4.32 in the transceiver. The affected system will include either a 9001 or 9002 modem, but no Automatic Link Establishment (ALE) controller.

## Symptom

The system will not allow the modem to PTT in response to an incoming data call if the system is scanning at the time of the call.

## Action

Users of a single site, remote controlled system with 9001/9002 (no ALE) and software versions 3.08 to 4.32 inclusive must upgrade their transceiver software to version 4.33.

### Finding the software version of your transceiver using the remote control console

- Press **Function**, then enter the function code **10** within two seconds followed by **Enter**.

The display on the remote control console will show the software version of the transceiver.

## Finding the software version of your transceiver using the transceiver

- Press **Mode** until you see a display that is similar to the following.

Option TxE	
No of Channels:	12
	SLOES
EXIT	NEXT

- Rotate **Select** or press **F2/NEXT** until you see the software version for the transceiver.

## Compatibility

Software version 4.33 supports Computer Interface Command System (CICS) version 2.10. It is fully backward compatible with CICS version 2.00.

For further information on software compatibility, see Service Bulletin “9323/9360/9780/9390 Software Compatibility Summary”, Codan part number 17-00156.
