TB8100 380-420MHz Band

The TB8100 is now ready to order in the 380-420MHz frequency band at 5W, 50W and 100W. The new band has compliance in USA, Canada, Europe, Australia, and New Zealand.

This band was developed primarily for the digital market and TB9100. The frequency band designator is H4, pricing is the same as for other UHF bands. The UHF PA band has been extended from 400-520MHz to 380-520MHz.

Electronic versions of the brochure on TaitWeb and TaitWorld, and the specifications section on TaitWorld have been updated. The Configurator will be updated this week to include this new band.
